to use for an antenna on the HP Signal Generator. (I am not sure what the
RF connector is on it)

If anyone has more info, please pass it along.

Thanks
Michael

Hi Walt,
It's not what you think it would be, but it's a circuit that would work
well for what you want. Check out the small headphone/speaker output
mixer in the ARRL Handbook. It's in a few 80's and 90's issues...

The circuit provides a load for each input, mixes the volume, the provides
about 1/4 watt audio output power to drive a small speaker or headphone.

You can also use higher powered amplifiers after or a powered speaker.

Been doing it for years.

Source record: 70782

Mike:

That connector is a type N connector. Adapters to mate it with a BNC connector are available at most hamfests and at Radio Shack. The output of that generator is fairly bullet proof so running it into a non 50 ohm load (like a paperclip) shouldn't hurt anything. To be sure, add 10 dB attenuation with the attenuator that is built in to the unit. Using a rubber duck antenna probably will give you more consistent results than a paper clip and be a better load to boot.

The output connector should be a type "N" connector unless someone
changed it to something else after-market.

Yes, you should be able to use a paperclip safely, this unit has
reverse power protection on the output to prevent damage from
application of power of up to 50W at 990 MHz, DC voltage must not
exceed 25V. So, the output circuitry is pretty robust.

These are fairly nice signal generators, cost $7190 according to my
1984 HP catalog. 100 kHz to 990 MHz, +13dBm to -127dBm output level.
What did you have to give for it?

Source record: 70789

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

Try cleaning the conductors on the circuit board with isopropyl
alcohol(common rubbing alcohol) on a Q-Tip. Scrub it a little bit to remove
stuck-on material from the pushbutton. Also clean the part of the rubber
button that presses against the copper lines. That has restored the
operation of many similar devices for me.

Source record: 70704

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

Hi Murray:

I would not "turn the power up a bit" unless you have a spectrum analyzer to check the third and fifth order distortion level. There are too many hams who have broad signals because they use a rig improperly.

The 756 is adequate on third and fifth order distortion as it comes ffrom the factory, but improper tweaking will get it to sound like a sweep tube amp.

95 watts should drive the L4B just fine. If you go from 95 to 115 watts, you will begin saturating the input of the L4B and reduce the imd of that. The result will be that you will have more power indicated on your wattmeter, but your signal will be less clean and may be less readable.

My Collins KWM2A puts out 65 watts - because that is where the best imd specs are. When I hook it to a linear, I often underdrive the linear. However, I can work everything I hear and that is good enough. I would rather get "nice audio" reports than " what the Hell are your running there, a buzzsaw, Buddy".

Just my 2 cents worth.

Message-ID: <9T_E5.429$To.3175@news3.atl>
Source record: 70707

I have a nice Yaesu FT-290 RII 2 Meter all mode transceiver.
It has the 25 watt amp module, Sub-tone encoder, Two snap
on battery packs (one full of C nicads), leather case battery
charger (Cube) mobile bracket, manuals and original box.
Box is not in great shape as it had some damage from moisture
while box was in storage while radio was in use.

Radio has no major scratches except for a scrape on final
caused by sliding radio in and out of mobile bracket. You
can run this low power with the battery pack and front
panel BNC antenna jack for mountain top SSB. I just
put it on the bench and it was on frequency and making
25 watts as measured on bird meter.

Need to sell as I have new Yaesu FT-100D that handles
all-mode on 2.

Not sure of value so make me an offer.

Source record: 70708
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I want to know which freeware/shareware contest logging program to down load. There are many to choose from out there. I'm not a big contester but I would like to participate in this weekends FISTS sprint (14 Oct 2000). The sprint is single operator and singel mode (CW of course). The two primary criterion for selecting a program are:

- Free
- Quick and Easy to learn

The particulars which the program needs to handle for this sprint are:

- Must log Call / Band / Name / RST / State / Member-Number
- Must Dupe check Call / Band
- Would be nice if log can be exported via ADIF file format so I can later import it into my regular logging program.
- The program doesn't have to be sophisticated - no keying of rig, canned messages (I have a memory keyer already), rotor/rig controle, etc. etc. Just a basic logging program.

Your suggestions would be appreciated. Please give me the URL where I can download your suggested program.

Thanks - Jeff - KA9S

2023. Alinco DR1200 service manual ???

Greetings!

I have for sale an Icom IC-737 HF Rig with built in antenna tuner! Rig is ABSOLUTELY MINT! Not a scratch anywhere! Comes complete with manual, hand mic, and DC power cord! Less than 2 hours time on this unit! You will NOT find a better one anywhere! AES sells 'em USED for $900...Save some money here at $750 shipped to your door! I have an IC-746 as my 'primary' rig right now, and am looking to add a 756 to the shack, so this one goes. No mods done to rig, never opened up. Read the reviews on this great rig at www.eham.net! You won't be disappoionted! I would really like to sell this rig...but would entertain trade offers...Pics available upon request! Payment via PayPal.com Preferred!

**** Post for FREE via your newsreader at post.usenet.com ****

Dear om
if you can help me I`ll be happy :)

I have a Transceiver (Kenwood TS-140S)
But it is not work now

SYMPTOMS :

First time : good receive but audible alarm " UNLOCK "
with morse code time to time .

Now : - open display firs time (forexample 14.000.00)
- after opened display (like . . . .)
- not receive also not any sound or hiss
- not transmit
- alarm " UNLOCK " with morse code repeatly .
- when I rotate Tuning knob display is open
like 14.230.00 but again . . . . . . .after 1 second.

I measured 3.2V on back-up lithium battery .

I don't know what you mean by open up the audio. maybe they are talking
about disabling the alc circuit to try to get more power out??? All I
can say is : DONT!!! If you want a trashy sounding radio, thats the
first thing to do. You'll be spitting out so much garbage you cover half
the band in one shot. My motto is: If it works, don't fix it. MK

You can do the same thing with Microsoft Publisher and print them yourself for free. Probably any publisher program will do this for you. Why pay someone else to do this if you don't have to.

2034. FA: RARE! Robert Dollar 2 Meter Transmitter @ $1.00!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-11 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <39e4c6be.3274709@news.pacbell.net>
Source record: 70720

I have a RARE One of a Kind, Robert Dollar Co. Model 222 2Meter Transmitter for auction. I have never seen one of these before. The radio puts out 5-7 watts and operates on 144-148 MHz Band. The manual also states that it can go in the Civil Air Patrol Frequencies. I will include the ORIGINAL manual as well.

I think that this was made in the 1940's-1950's. The unit contains 5 tubes.

It is currently at ONLY $1.00!! and there is NO Reserve!

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=459636264

John,

if you have modify the 10 volts, you need to realign the TR-7 (all the procedure). See in the servive manualo.

I have ruled out the try and unplug and plug back in mode of fixing. I understand how the power supply board works. I have all voltages from power supply board to the pbt board but no bfo output. I made an error in diagnosis I do have transmit. seems as if the synthesiser came unlocked on receive but when I go to xmit it locks. so I will chase that problem first then go on to the bfo problem. if I don't get it I'll drop it out of the second floor than take all the filters , n.b. and accessories and sell it off. the c-line is a far better performer in my book and as long as the one here keeps working I am a happy camper.original post was meant for and to see if anyone had same problem in the 22 years these radio's have been around and help me short cut the circuit tracing and hair pulling and wife beating to find the problem. but I got a good head of hair and a tough wife so I think I'll make it. John

Faster recharge creates more heat I have noticed.
Whether this degrades the battery is hard to say but I would suspect it
does.

Check out this link to Thomas Distributing for an interesting
question and answer page on NI-MH batteries.

OK fellers, I have the following crystals left to sell, and will
therefore
drop the price to $3.00 each and see if anyone would like some of
them!!

All in HC-6/U metal holders. All frequencies in kilocycles/sec.
QTY is ONE unless otherwise noted.

80 meters
3686.4 Several available.
3866.0
3867.5

40 meters
7000.0
7159.0 (HC-33 wire) QTY 6
7188.0
7365.0

10 meters
29100.0

6 meters
8350.0
8383.1
8383.1
8392.0
8407.7
8411.5
8420.0
8403.8
8428.0
8540.0
8461.0

Others:
3.571 MHz tiny metal oscillator chip $3.00
17.915 MHz crystal (HC-33 wire) $3.00

Calibrator Xtals for Collins etc.
1000 kHz - Still $5.00 each
2000 kHz - Still $5.00 each

CRYSTAL SOCKETS
HC-6/U ceramic, new $2.00 each

HC-33/U nylon, new $1.25 each

Please remove the 'NOSPAM' to E-mail me!!

Q: Before the accident.
A: Sure, I played for ten years. I even went to school for it.
++
Q: Do you know if your daughter has ever been involved in voodoo or the occult?
A: We both do.
Q: Voodoo?
A: We do.
Q: You do?
A: Yes, voodoo.
++
Q: Trooper, when you stopped the defendant, were your red and blue lights flashing?
A: Yes.
Q: Did the defendant say anything when she got out of her car?
A: Yes, sir.
Q: What did she say?
A: What disco am I at?
++
Q: Now doctor, isn't it true that when a person dies in his sleep, he doesn't know about it until the next morning?
++
Q: The youngest son, the twenty-year old, how old is he?
++
Q: Were you present when your picture was taken?
++
Q: So the date of conception (of the baby) was August eighth?
A: Yes.
Q: And what were you doing at that time?
++
Q: She had three children, right?
A: Yes.
Q: How many were boys?
A: None.
Q: Were there any girls?
++
Q: You say the stairs went down to the basement?
A: Yes.
Q: And these stairs, did they go up also?
++
Q: How was your first marriage terminated?
A: By death.
Q: And by whose death was it terminated?
++
Q: Can you describe the individual?
A: He was about medium height and had a beard.
Q: Was this a male, or a female?
++
Q: Is your appearance here this morning pursuant to a deposition notice

which I sent to your attorney?
A: No, this is how I dress when I go to work.
++
Q: Doctor, how many autopsies have you performed on dead people?
A: All my autopsies are performed on dead people.
Q: All your responses must be oral, OK? What school did you go to?
A: Oral.
++
Q: Do you recall the time that you examined the body?
A: The autopsy started around 8:30 p.m.
Q: And Mr. Dennington was dead at the time?
A: No, he was sitting on the table wondering why I was doing an autopsy.
++
Q: Are you qualified to give a urine sample?
++
Q: Doctor, before you performed the autopsy, did you check for a pulse?
A: No.
Q: Did you check for blood pressure?
A: No.
Q: Did you check for breathing?
A: No.
Q: So, then it is possible that the patient was alive when you began the
autopsy?
A: No.
Q: How can you be so sure, Doctor?
A: Because his brain was sitting on my desk in a jar.
Q: But could the patient have still been alive nevertheless?
A: Yes, it is possible that he could have been alive and practicing law
somewhere. >��

this reminds me vaguely of a saturday night live skit w/ Tim Meadows
and christopher walken where meadows is a census worker

i was so fugazied for this sketch that I almost pissed myself and had
no idea what was going on.

gonzo

Census-Taker: Mr. Leonard? I'm with the U.S. Census Bureau. We sent
you a Census form, but you failed to return it to us.
Mr. Leonard: My mail is piled up like crazy.
Census-Taker: Yeah. Well, I just need to fill out this Census form
with you. Uh.. how many people live in this residence?
Mr. Leonard:Oh, boy.. good question. I'm bad with numbers.. Maybe 80.
Census-Taker: 80 people live in this apartment?
Mr. Leonard: Seems high, doesn't it? Not 80. How about 4? I don't
know.. I'm so bad at guestimating..
Census-Taker: Well, just take your time, and count.
Mr. Leonard: Okay.. there's me.. my wife.. our plants.. we have some
candy bars..
Census-Taker: Well, you know, we don't count candy bars or plants..
Mr. Leonard: Well, then, there's just the two of us. Boy, I really
overshot with the 80!
Census-Taker: Listen, don't worry about it. I'm gonna put you down as
the Primary Resident, okay? Now, are you currently employed?
Mr. Leonard: Yeah.. part of the time.
Census-Taker: Well, you work part-time. How many days of the week?
Mr. Leonard: Every day.. but just part of the day. From 9 to 5.
Census-Taker: So, you work a full day?
Mr. Leonard: I wouldn't say that. There are huge chunks of time.. at
night.. where I'm just asleep. For hours. It's ridiculous.
Census-Taker: No, it's not that ridiculous. Mr. Leonard, do you own or
rent this apartment?
Mr. Leonard: Sure. You have to ask one of the other 79 people.
Census-Taker: You mean your wife?
Mr. Leonard: Yeah.
Census-Taker: Well, can I talk to her, then?
Mr. Leonard: She won't answer you. She's a bobcat.
Census-Taker: You got a bobcat in there?
Mr. Leonard: Well, I have a permit. [reaches into apartment and pulls
out a sheet of paper] Here you go.
Census-Taker: [examines paper] This is a permit to run a nail salon.
Mr. Leonard: Wrong one! Wrong one! [pulls another sheet of paper out
of his apartment]

Census-Taker: [examines paper] This is a permit to do street performances.
Mr. Leonard: Yeah. My wife's a big part of the act.
Census-Taker: [shaking head] You know what? Fine. [changing subject] Mr. Leonard, are you a citizen of the United States?
Mr. Leonard: I have dual-citizenship with the United States and Florida.
Census-Taker: Florida is a part of the United States.
Mr. Leonard: Don't push your politics on me, pal. All's I know is when I turned 50, I was issued a Florida passport. [hands him the "passport"] Here you go.
Census-Taker: [examining "passport"] Alright.. this is a novelty birthday card. And it says, "You're over the hill. Here's a passport to Florida." This is not a real passport.
Mr. Leonard: I don't know.. you know? Whenever I go to Florida, I show it at the border, and they always let me in!
Census-Taker: Listen, Mr. Leonard. A real passport wouldn't have a picture of a sexy nurse on it. This is a joke card.
Mr. Leonard: Well.. it's a hell of a forgery!
Census-Taker: [exasperated] Okay, let's just proceed as if this were going really well. Now, how long have you lived at this address?
Mr. Leonard: Oh, man! There you go with the numbers again!
Census-Taker: Just take your time.
Mr. Leonard: Well, what do most people say?
Census-Taker: That's not important!
Mr. Leonard: I feel an enormous amount of pressure to get this right. I want to win that car!
Census-Taker: [shaking his head] There's no car, Mr. Leonard! How long have you lived here?
Mr. Leonard: Alright, when I moved in, it was the Spring, and Clinton was President.. I'd just gotten out of jail.. I'd say an hour.
Census-Taker: Alright, let me go over this again, then. You are a convicted criminal, living alone in an apartment with a bobcat. And you work 56 hours a week as a street performer.
Mr. Leonard: When you say it like that, my life sounds pretty damn good!
Census-Taker: You know what? I've talked to a lot of people all over this country.. and your life is pretty damn good. You wanna get a beer?
Mr. Leonard: You know, I'd love to, but.. [points into apartment] .you know.. the ol' ball and chain..
Census-Taker: Alright. Take care.
Mr. Leonard: Have a good one. [returns into the apartment to find his bobcat/wife growling at him] Again?! We just did it!

Dr. Gonzo

"You can turn your back on a person, but, never turn your back on a drug. Especially when it's waving a razor-sharp hunting knife in your eye."

Hi! Is anyone using the Radio Shack HTX-10 as an IF rig for a VHF/UHF transverter? If so, did you separate the RX and TX ports somehow, or just run an RF-sensed switchover circuit? I know there are more suitable rigs (HR-2510, 2600, etc.), but this is the one I have.

Any thoughts/suggestions would be appreciated.

Thanks much!

2075. The search for a gene...

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-12 00:00:00 UTC
From: analog24@webtv.net
Message-ID: <13104-39E67AFF-1@storefull-177.iap.bryant.webtv.net>
Source record: 70670

GENETIC
FACTOR EYED

Biofeedback Systems in Los Angeles, is looking for
volunteers with a rare genetic inheritance, to participate in a
proprietary study.
At present, it is believed that fewer than one person in 400
carries a rare genetic makeup that predisposes them to having better
health than most, a strong immune system, and an unusually high energy
level. Aside from behavioral manifestations such as a generally positive
outlook on life, the principal evidence that this genetic factor is
present, is mirrored in the shape of the eyes.
It should come as no surprise then, that the eyes themselves
would be used to select the people who are nost likely to have this
elusive gene. Individuals selected for this study will be white,
Caucasian, of either gender, and between the ages of 25 and 50.
Compensation will be determined by a collective evaluation of the total
number of applicants selected. Drugs will not be administered as a part
of the study.
The eye contour that embodies the required genetic trait,
has been roughly described as "almond shaped," but this is not an
adequate definition. Exact specifications follow.
Looking in the mirror with the head level, the qualified
applicant will see that the lower half of their eyelid is CONVEX UPWARD,
from the bottom on either corner. The bottom part of the iris will be
partially covered by the lower eyelid (this is important), and there
will be a reasonable symmetry between the eyes on the left and right
side of the face.
Applicants must submit a close-up facial photograph for
evaluation. Since no risk or disease factors have been associated with
this gene, any risk to volunteers in the study is contraindicated.
Interestingly, it is apparent that the "energy gene" as it has been
called, may be dormant in one or both parents, yet it may be actively
transmitted to their children; but it is only infrequently active among
two or more siblings.
If you know of a person, or happen to notice one whose eyes
might qualify them for this study (preferrably among those employed in
the technical community), you may want to share this data with them.
Since so few people are fortunate enough to carry this gene, your only
encounter with one of them may be in a fleeting moment. It would be
wonderful if you had a copy of this announcement with you, and could
share it with a prospect in passing. Alternatively, you could specify
this website and posting date, or perhaps my email address.
They may then contact Mr. Norman Swartz at this

[virus-proof] email address: analog24@webtv.net (It is not generally realized that, because webtv has no hard drive, it is immune to destructive computer viruses.) Or, they may write to: Biofeedback Systems, Post Office Box 8501, La Crescenta, CA 91214. No telephone calls please. Depending upon the number of volunteers selected, applications will be accepted through the end of December 2000, with a possible extension through 31 January 2001. The duration of the study will be a minimum of two years.

Source record: 70672

My selling price survey of Tek stuff on eBay has been updated. The survey
now includes 1348 different instruments (scopes, probes, plug-ins etc), and
there are over 15,750 prices data entries gathered during the past 14+ months.

HP and Wavetek stuff are now together on a separate page. General Radio gear is now on its own page. The lists were just getting too long.

My site is located at :

http://www.vaxxine.com/phil/

Comments/suggestions on the format greatly appreciated.

Phil Turcotte (VA3UX)

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Any of them that use doublers in the PS which is actually quite common with
most of the Dentron Amps.

> Sure, the voltage drops a bit, but it's going
> to anyway no matter how keyed. The smallest amp I've used was a heath

It's really not the size, but rather the type of rectifier circuit inadditon
to the transformer capacity.

> SB-200, and it could go at 600w "full power" for short times. Dunno, I
> don't think I'd want an amp that was as flimsy as you describe.

They are very common.

There is a big difference between what the meter shows (probably has a 1/4 second time constant) using a Quick, or short duration key down and pulsing the amp using high speed CW.

Check the tuning procedures recommended for any particular amp. If they say to use the tune position, then the plate current to voltage ratio should be the same as in full power with out dragging the PS down.

>The
> dynamic regulation would be the pits. I guess I'm partly spoiled on my

Which is what I'm also using
But would like to replace the 2K-4 with one of the new 3KD Premier units as it will work QSK. I could add the Jennings RJ-1 vacuum relay to mine, but I'd like the easy to drive, full coverage, legal limit output of the 3K

Course with a big loan I could have one on HF, 6-meters, and 2-meters.

Roger (K8RI)

2090. FS Collins 75S-3C

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-12 02:20:56 UTC
From: radioleo@earthlink.net
Message-ID: <ce9F5.319$MK6.13301@newsread1.prod.itd.earthlink.net>
Source record: 70734

I have a Collins round emblem 75S-3C receiver.
Its in very nice condition, its a 75S-3B S/N 85534 converted to a
75S-3C (Collins Factory Mod) these are the items it has:
1. Weighted Spinner Knob (not plastic)
2. F-455-FA-05 500 HZ CW filter
3. Filter Cover
4. Skytec (Tubesters)
5. Original tubes
6. Spectronics DD-1C Digital Frequency Counter (made for Collins)

7. A BEAUTIFUL receiver addition that includes an extra F-455-FA-21
2.1 filter.
As you already know this radio comes stock with a F-455-FA-21 filter,
it now has TWO. This makes the 75S-3C receiver have more selectivity.
You are unable to see it. Its done in the bottom of the chassis, and
under a metal cover...VERY NICE JOB.
8. I have the manual for the 75S-3C, Tubesters, and Spectronics DD-1C
9. Original Paint, Knobs, and feet, no holes of mod's to the chassis

Price is $2000.00 plus shipping

If you need to se pictures just ask....

Thank You, & 73,

Leo KJ6HI
(310) 670-6969

2100. Re: IC735 mod to open up audio?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-13 00:00:00 UTC
From: "George, W5YR" <w5yr@att.net>
Message-ID: <39E74B4A.C215CD60@att.net>
Source record: 70603

A lilttle basic theory here . . .

Suppose that on keydown CW, the output of a transmitter is 100 watts and some output power meter reads "100."

Now, arrange for that radio to the SSB-modulated. Assume that there is as much audio input as the radio can tolerate such that the output stages produce a related level of power WITH A CORRESPONDING INTERMODULATION DISTORTION LEVEL WITHIN THE SPECS OF THE RIG.

Now, what should that "output" meter read that formerly read "100" for the CW keydown case?

Well, if the meter were perfect in the sense that it had no mechanical inertia and thus no time lag in its indications, it would typically read in the order of "10" while normal average speech was being applied to the microphone!

Hey! What is wrong with this rig?

"How do I open up the audio so that the meter reads as high on SSB as it does on CW?"

Nothing is wrong with the rig.

It is still being driven to produce the SAME peak-power output as it does with CW. But with normal speech those peaks come along much less often than they do with CW, which is on every element of every CW character. So, the average power is less - much less than most folks realize.

The answer to this all-too-often misunderstood situation (that encourages too many amateurs to crank up their mic gains and everything else trying to make that meter read as high as with CW) is actually pretty simple.

Normal adult male (and many female) voices have a ratio of peak power to average power in the order of 10 - 15 db. In other words, speech waveform power peaks are from 10 to about 31 times larger than the average power level.

Since that output meter is really electrically reading an average power level (unless it is peak-reading instrument) and is mechanically doing the same due to its mechanical inertia and lag time, it can only respond to the average power level of speech. So, it reads only about 1/10 of the output power on SSB that it does on CW.

This effect has been publicized and elaborated upon in magazine articles and handbooks ever since phone operation began and especially since SSB operation became popular and widespread. Still, SSB operators as a group tend to either be unaware of the power relationships in speech signals or simply ignore their effects.

Bottom line: if your transmitter puts out a certain power on keydown CW as measured by some average power meter on the output, then that same meter is going to read only about 1/10 that power level when you use SSB with the system set up to transmit the same peak power.

If your average power meter reads much more than about 1/5 to 1/10 the keydown power level, then it is guaranteed that you are altering the output signal waveform by either compression or clipping or both. And the result will be increased distortion of your voice signal. And this is heard at the other end as "splatter."

In most transmitters, the ALC functions to compress the output waveform in a sufficiently gentle fashion to avoid generating too much distortion, although some will be generated in any event.

In almost all transmitters, operation at high input audio signal levels will ultimately result in peak-signal waveform clipping in the final amplifier stage which will produce uncontrolled amounts of distortion or splatter.

What to do: monitor the r-f output of your transmitter with a scope. Find out, FOR YOUR VOICE AND MIC, what levels you can run that DO NOT cause speech waveform peaks to be clipped or compressed. That will tell you how to set up the mic gain, etc.

If you don't have access to a scope, just set the mic gain such that your normal speech produces about 10 to 15 watts indicated output on the power meter. That should be on the safe side for most rigs but still produce an effective "clean" SSB signal.

Please, do not think that something is wrong with the rig and that some "mod" is required just because the output power meter behaves differently on SBB and CW. If you are operating the rig properly, that meter is doing its job and telling you what a good job you are doing! <:}

It is only illegal if you use it on 11 meters. I have used mine on
10-17-40 meters
works GREAT!!!

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

2110. AM Radio Design Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-13 00:00:00 UTC
From: LB <lcorney@ford.com>
Message-ID: <39E766BE.D93820C0@ford.com>
Source record: 70613

Not really sure if this is the best place to post this question or not, but here goes... I'm looking for info on AM Radio Design. Maybe some of you guys are really into the "how stuff works" side of audio and radios?

In the United States, Radio Frequency transmission bands between 535kHz and 1705kHz are reserved for AM Radio carrier waves. In these waves is contained the audio signal for a radio station's broadcast. The audio signal, sometimes refered to as the baseband, has a particular audio frequency response.

As I understand it: (from recent work in digital wave files)
High Fidelity audio goes from 300 up to 22,000 hz
Good audio goes from 300 up to 11,000 hz
Voice only applications use 0 to 3500 hz response. (telephony)
(Note in digital realm, nyqist sampling is 2* frequency... a high fidelity audio .wav file contains 44khz/ each channel)

Does anybody know what audio frequency an AM Band radio is designed for??

References or textbooks on this subject? If this is the wrong newsgroup, anybody got a group more likely to provide appropriate response?

Many thanks in advance, (in case you are wondering... I'm working on a electrical engineering project at a local university...)

LB
Dearborn, Michigan.

p.s. Nyquist theory, at 100 to one (lots of margin for noise) says response should be 0 - 5350 hz . This seems too low to me... talk radio only?

2111. 756 Repair.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-13 00:00:00 UTC
From: Hamtrader <hamtrader@hamtrader.cc>
Message-ID: <39E792DE.84398634@hamtrader.cc>
Source record: 70614

Scott, I told a good friend of mine to send his 756 to you for repair
and he told me that you do not work on 756 radios... Is that true?
He is disappointed and is sending it to Texas for repair... I know that
they might charge him an arm and a leg.
He is Terry in Monticello AR WB5HIL.
I was just wanting to know exactly what you told him about his rig, or
why you dont work on them, so I will not send any more 756 rigs up for
repair..
I know there is always 2 sides to a story, and I dont want him to spread
and roomers about your ability...
Thanks for any info you can tell me about the 756 repair, that WB5HIL
called you about...

==========
Hi LB
From the horses mouth -- The Federal Communications Commission pages

FR 65765, Nov. 15, 1979] Regarding AM Standards of Transmission

ï¿½ 73.766 Modulation and bandwidth.
The percentage of modulation shall
be maintained as high as possible con-sistent

with good quality of trans-mission
and good broadcast practice. In
no case shall it exceed 100 percent on
positive or negative peaks of frequent
recurrence. It should not be less than
85 percent on peaks of frequent recur-rence.
The range of modulation fre-quencies
shall be so controlled that the
authorized bandwidth of the emission
shall not be exceeded under all condi-tions
of modulation. The highest modu-lating
frequency shall not exceed 5
kHz.
[38 FR 18896, July 16, 1973]

Thus 5,000 Hz is the highest frequency allowed for AM. This is why AM Radio has a lack of high frequency tones compared to FM which is 50 to 15,000 Hz.

Baseband applies to FM as it has a baseband of 50 to 15,000 Hz (left + right channels) and multiplexed right and left channel information at 38kHz. The multiplexed info is combined with the baseband to create separate right and left stereo channels.

Never heard baseband applied to AM though.

You can find all this on the FCC page at URL:
http://www.fcc.gov/Bureaus/Engineering_Technology/Documents/cfr/1998/
Click on 47cfr73.pdf Radio broadcast services (Takes a long loading time)
Then search for the AM and FM Standards

Chris your watt meter must be lying.
Not to be rude, but that amp is not doing that kind of RMS wattage. The peak
wattage is believeable, but not the RMS wattage.

YOu will hear many opinions on this, but whatever you do, set aside 15
ot 30 minuits every day at around the same time to practice.

If you just want to get to 5 wpm and stop, then get some tapes and
follow them. YOu might also want to listen to the W1AW code practice
sessions on the radio after you finish a beginner tape.

To get up to a faster speed, get on the air and make some contacts.

I have heard a program called Super Morse (or something similar) works
very well for some on the computer.

I took a class from a local amateur club, and I thought the instructor's approach to teaching CW was very effective. The instructor gave us 6 to 8 (carefully chosen) characters per week to study, and we went home and practiced using Morse Academy or Super Morse. I used Morse Academy, but couldn't get it to work on my pentium NT machine, so I reverted to my old 486. There're lots of programs available on the Internet (MorseCat and NuMorse come to mind), so you should be able to find something that works on your machine.

Here're the characters he gave us:

Week 1: A E R N T 3

Week 2: I O S D H 7

Week 3: C U Y . L M 2

Week 4: P G F , W B K 8

Week 5: J Q X V Z ? 6 /

Week 6: 1 4 5 9 0 (SK) (BT) (AR)

The instructor's idea was to start us out with mostly easy characters, but insert one or so difficult ones - such as the 3 in week 1 and the 7 in week 2. He also gave us characters that are easy to confuse, such as S and H in week 2. This gives more time to work with them and to learn to distinguish them from other characters.

The other thing the instructor told us was to practice every day. I tried to practice about 15-20 minutes every evening, and on weekends I'd practice first thing in the morning and return to it in the evening. Of course there were days when I didn't get to practice, but I found it was better to spend even 5 or 10 minutes practicing rather than simply skipping it.

I'm not saying that this is the easiest, fastest, or best way, but it worked for me. I passed my 5 wpm test last November and my 13 wpm test this past March.

Regardless of the intended use part 47, section 2.815 of the FCC regulations make this amp illegal to *offer* for sale in the US. See the following, or go look it up on the FCC page:

[CITE: 47CFR2.815]

Sec. 2.815 External radio frequency power amplifiers.

(a) As used in this part, an external radio frequency power amplifier is any device which, (1) when used in conjunction with a radio transmitter as a signal source is capable of amplification of that signal, and (2) is not an integral part of a radio transmitter as manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz.

Note: For purposes of this part, the amplifier will be deemed incapable of operation between 24 and 35 MHz if: (1) The amplifier has no more than 6 decibels of gain between 24 and 26 MHz and between 28 and 35 MHz. (This gain is determined by the ratio of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier.); and (2) The amplifier exhibits no amplification (0

decibels of gain) between 26 and 28 MHz.

Keep the illegal stuff out of rec.radio.swap.

2120. Re: Waveform for a battery charger

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-13 00:00:00 UTC
From: Hamz <no@sp.am>
Message-ID: <39E7EFEF.9BA9015B@sp.am>
Source record: 70623

A battery charger often has NO capacitor in it to smooth the waveform and the expected waveform will look like a full wave rectifier BEFORE THE FILTER IS ATTACHED. Thus it'll be a series of "loops" going positive and dropping to zero between the loops.

Your "picture" is unintelligible to me...sorry.

I've even made battery chargers with only a single diode in them and it works fine though doesn't produce as much output and usually I've had the peak voltage a bit higher to get reasonable output.

I don't know what type of meter you're using but trust the scope and forget the meter. The battery doesn't care about it dropping to zero as long as it's putting "pulses" of current into it and as I recall there's some discussion usually about the pulses of charging current being better than just a steady state DC voltage.

Older high capacity chargers often used dry disk oxide rectifiers as I recall. I would assume today's replacement would be a high capacity stud mounted diode assembly to dissipate the heat from the high current/power.

This is a little off subject but where would I get expertise like you guys.
Her is my question. I have a heavyduty battery charger that I suspect has a bad rectifier. I put my scope on it to see if it was rectifying like I think it shold and here is my best ASCII representation:

Basically, It looked like a full wave signal that went to zero between phase changes. I think it look to the batteries like an AC signal as when I put a DC meter on the leads it reads 0 DC volts.

Any suggestions? Anyone have a source for these giant rectifiers? This thing is rated for 400 amps.

Any help would be appreciated,

Russ
To respond to me just remove the capital NO before my address.

I knew a guy who had a set of three for 6m,2m, and 440 if I remember
right. All consoles. But they later were stolen from a mini warehouse
where they were stored. I've got a 2k classic. 83 model. It's all I need
for a tube amp, but I do wish it had 160m. I'm going totally solid state
before too long. Want to build a solid state amp. Once I get one of
those going I'll probably semi retire the henry. I think I'll still keep
it around though for rough stuff. And with it's R2D2 looks it's still a
good shack attention getter..g They are built like welding machines. MK

I ran a 735 and it was a nice radio "but" the average and peak
talk power was a lot less than a 751A, even tho they were both
rated with the same output power. It would go to peak (100 watts)
fine on CW but SSB was just anemic, no matter what I used for
microphones, preamps, etc. So my guess is that this is about
changing that condition.

Last chance to obtain the complete set and keep these together.
The XYL says they have to go!

Reduced the price to see if someone would like these.
If they do not sell by this next week I will part out the station for
those who
are seeking the individual pieces.

Heath SB-102 HF Transceiver (was $275.00)
Heath HP-23A (Mounted inside SB-600) (was $100.00)
Heath SP-600 Speaker (was $50.00)
Heath SB-620 Monitor scope (was $100.00)
Heath SB-630 Station Monitor, SWR, Timer (was $100)
Interconnecting cables included

Pictures available.

All are in great shape. A few minor paint chips here and there but
otherwise
excellent. Will sell the complete station for $525.00 firm

Also available:

Heath HD-1410 CW keyer with built-in paddles. Like new. Make offer.

B & W Low Pass Filter FL-10/1500 Rated for 1500 Watts, with SO-239
connectors. Looks really sharp, unused and in "as-new" condition.
Picture available. Will sell for $25.00

Shipping additional on all items

* Please emove the 'NOSPAM" to E-mail me.

I just recently purchased 50 feet of rohn 25-G tower, and I would like to build the base plate for it.... Does anybody out there know what all the demensions are? Is it about 20" to 24" or so on one side? (2 square feet)? I heard it is about 3/8" metal plate in thickness, but I need to know the overall size of the plate... plus hints as to what kind of metal tubing (size, etc) to use for the three stubs that come up from the plate that the tower sits on... Thanks

clint

Call Rohn and ask for their Consumer Products catalog.
Ph is, or was, (309)697-4400

The catalog has a price of $8.00, but they have been known to send them, no charge.

Or, you can just ask them for the dimensions.

I do have to ask the question as to why the base plate?
They make a five foot section to set in concrete and that is much more solid than the base plate.

That said, the base plate for the 25G is 3/16ths, not 3/8ths. It also has swaged pieces welded in place, to fit the bottom section of the tower.

I could give you the dimensions, but the whole assembly requires quite a bit of welding and would better be made from the engineering drawing.

However what ever you make will probably not have the hot dipped galvanizing and skilled welding. If you have to hire it welded, buy the material, and have it cut, I'd guess that just ordering a base plate from a distributor might be less expensive (Unless you can do all the work yourself.) and more reliable.

If you are only going up 50 feet, I'd just set one of the sections in the dirt about 4, or 5 feet with plenty of gravel, or crushed rock at the bottom for drainage.
It depends on the part of the country in which you are located, but in Central Michigan I've used dirt bases for nigh onto 40 years and on small towers up to 90 feet successfully. The dirt base actually adds more rigidity to the tower than a base plate.

With larger towers the cost of the guying and base go up exponentially.
I'm replacing a 90 foot TV type tower with a 97 foot ROHN 45G. The guying system and concrete are running about twice the cost of the tower.

Even at 90 feet the old TV tower has done very well with a dirt base. I hasten to add that it has a four point guying system and is quite rigid, but that is really too tall for that particular tower even though it's been up at this site for over 16 years.
I'd also add that I'd not recommend going to 90 feet using a dirt base.

I'm taking it down and I can guarantee that at least the bottom three sections will be swaged together to the point of requiring a jack to get them apart.

I am using or trying to use a 4 mag mount setup with a diamond hv7 ant. its good on 2 but hf sucks. also,, i get the mount and it has a so-239 on it and then a wire soldered to a dam 3/8-24.. what the hell is that??? where is my uhf type mount.. so i soldered a 1 foot chunck of belden to the so239 screwed the ant on it and hooked up my coax. I think i am going to just order a comet lip mount with a uhf assembly or should i get the uhf assembly and drill a hole for it in the mag mount setup and try it that way.. any ideas guys?

[CITE: 47CFR2.815]

Sec. 2.815 External radio frequency power amplifiers.

(b) After April 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including
advertising for sale or lease), or import, ship, or distribute for the
purpose of selling or leasing or offering for
sale or lease, any external radio frequency power amplifier or
amplifier kit capable of operation on any
frequency or frequencies between 24 and 35 MHz.

Now, what part of that do you not understand? It menioned NOTHING about
making exceptions for anything.... you cannot build them, you cannot
sale them, you cannot give them away. You could put a tag on it marked
"exotic coffee maker" and it would be just as illegal.

Same here in the southern part of the province of NB....excepting a few little blurbs of activity during morning and evening rush hour (and only in SOME areas) it seems (to me) that the majority of the 2 meter (my experience) repeaters are nearly unused.....I take my hat off to those who still maintain 'em!

A licensed amateur can legally build his own gear, including a ten meter
amplifier. Up to two per year, according to FCC rules. Beyond that it
is called "manufacturing" and required FCC type acceptance.

2164. Re: Repeaters and their lack of use!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-14 00:00:00 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <39E90425.9F2D464@erols.com>
Source record: 70566

***There is no question that the percentage of activity
on 2 meter repeaters has dropped. I have talked to a number
of amateurs who drive throughout the country and they confirm that
fact.

In 1982 I drove from the Washington DC area to British Columbia,
Canada and virtually talked continuously over the 3,000 mile drive.
For the past 3-4 years I have driven to/from Palm Beach, Florida
area and can count the number of contacts on one hand for the 2,000
mile round trip. I do admit however, if you ask for help, you will
receive it. Ragchewing is minimal for out of towners.

Here in the Washington DC metropolitan area, which includes Northern
Virginia and surrounding counties of Maryland, it is quiet. And
on top of that, interference from paging transmitters have become a
problem.

Most are on/about 152mhz. One company has 24 transmitters surrounding
the area and alternatively transmitting on one frequency. On three
separate occasions our repeater club has isolated the specific
frequency, and identified the call signs, no small task. Fortunately,
in all cases, the company corrected the problem(s), but we had to
inform them! What ever happened to preventative maintenance?

MRB-5 Receiver complete looks ok $40.00

MRB-5 Receiver s-meter scale faded almost completely wrong knobs $25.00

MB-560A transmitter no dial glass $25.00

MB-560 transmitter complete looks ok $40.00

plus shipping from 61559

They all have scratched cases and extra holes drilled. Not beat to heck just
used.
I have not tried any of these so I don't know their electrical condition.
They are complete
except as noted.

Thanks Larry

2166. F.S. VERY HEAVY DUTY 4-Element 10 Meter Beam

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-14 00:00:00 UTC
From: "Jay C. Greenberg" <wa4vrv@srv.net>
Message-ID: <tj6iusk5bjqp3m8gjbjh3klnrm4fai812d@4ax.com>
Source record: 70568

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Hi! I am trying to find a good contesting headset. All I have found are the ones from Heil and another company called Warren Gregoire. Does anyone have any experience with either of these? Are there any other headsets out there not commonly known about? Any info will be greatly appreciated! Please email direct to: NZ8C@aol.com

2170. Re: Waveform for a battery charger

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-14 00:00:00 UTC
From: Gord Skiffington <skiffing@nbnet.nb.ca>
Message-ID: <39E87E80.7684@nbnet.nb.ca>
Source record: 70641

Howdy Russ.....Your waveform isn't all that bad looking for a typical automotive/truck type battery charger. The way to test though, is by actually connecting the charger to a known-good battery, measuring the battery terminal voltage BEFORE connecting, then connecting and measuring AFTER (with the battery still connected of course). What you're looking for is the voltage across that battery to PULL UP and (if the charger is equipped or you have access to) checking the charging CURRENT. Typical chargers for lead-acid (and other types as well) are often full wave unfiltered, unregulated power supplies which, if observed with no load (battery) across them, look like the wave form you showed us. A couple of other points to look at are: 1. Some chargers have a "current sense" or "battery online" type circuit which controls a heavy solenoid in series with the chargers output.....if measuring without a suitable battery connected (i.e. NO battery or an OPEN or badly SULPHATED battery) it may not activate and will appear dead. Second point (based on your waveform and peak voltage measurement) is that the peak voltage may be quite high (18-20 volts or more isn't uncommon)....this will depend on what the maximum charging current was intended to be for the charger (or what the RATE switch is set at, if equipped). Lastly (long enough?), many many of the chargers sold over the years used very poor (cost effective) selenium diode stacks as their rectifying elements....these sometimes had strange features (in late life) such as breaking down OR changing their characteristics substantially while under load so if you are coming to THAT conclusion, I'd recommend swapping with HD silicon, stud mount rectifiers. New they can be quite expensive (depending on where you live) but surplus can be quite a bargain. Things to watch out for in these swaps are: Diode polarity with respect to the stud - often reverse to the old selenium stacks - just requires isolating etc; heatsinking required (the selenium rectifiers construction had its own heatsink qualities) - just mount on a BIG surplus heatsink etc and; diode rating - Note that the "booster type" of chargers are intended for VERY SHORT application of that heavy current (assist engine cranking etc) and that for normal battery charging could use very much smaller rated diodes (it always was a poor idea to crank an engine relying on the charger). Best of luck whatever you're into!

Message-ID: <39E88142.7FAC@nbnet.nb.ca>
Source record: 70642

Howdy Sam.....Lots of good advice to your query I see. The suggestion to dedicate "some" time per day is GOOD.....memorizing the code isn't the worst thing you could do....."DO" only think of the code as dits and dahs (NEVER dots and dashes or long 'n short!!!)...it more closely resembles what you'll hear with the correct rhythm (i.e. dahdidahdit for the letter C...you say this aloud of course or think it). Not the worst thing is to say this aloud (or think it!) when you see signs or printed matter (respect your surroundings heheh). The suggestion to improve your speed by USING the code is SUPER....I'd only add to DO THIS even while practicing (get a buddy and try it either across a table, room, hardwired to another building....or if you're on the air now, use a discrete 2meter frequency for example with your practice oscillators. DO listen to good morse code such as sent by W1AW, even if you don't copy it all or most of it....this will give you the correct rhythm and sound for the letters etc (the ones you copy and the ones you'll start to hear). As far as modern day methods, I'd stumbled across a program called Morse Academy that will run on any machine smart enough to handle DOS - and its the best/most interesting one I've seen/used (nearly 30 years of morse under my belt and it interested the heck out of me!).

Message-ID: <39e85302_2@news.iglou.com>
Source record: 70644

I used Rohns base plate once and will never do it again. It simply has holes through which you can fasten some all-thread rods. Trying to get the thing level is a real pain. i recommend the short tower section with the hinges. It would be much easier to get level and probably be more secure.

The way it sounds here in the midwest everyone should have plenty of time to use them since they don't appear to be used very much by anyone else. I have never heard 2 meters as dead as it is right now. Remember the days (notice I didn't say 'Good ol Days) when you had to break into a conversation to call someone else. Has cell phones taking over that much that we don't have time to ragchew at least in our commutes back in forth to work.

My 2 cents worth!

I have for sale some real neat GPS antennas. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPSII,II+, III+ or any Garmin or
other GPS unit that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. BNC to BNC jumpers up to 10 feet are also available for a
small additional charge. Will ship internationally, buyer pays full AIR
mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas
orders. USA orders can pay with US postal money orders-Western Union
money orders and will ship in a few days, personal checks when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

Suggest you start your project by enquiring into the FCC specs on AM broadcast stations. That will tell you the maximum audio frequency range that can be legally transmitted. Thus, that is the starting point for designing the AM receiver response.

Your frequency ranges are a little off. Hi-fi audio is generally taken to be 20 Hz to something over 20,000 Hz. "Good" audio applications set the lower limit somewhat higher, usually around 100 Hz or so and the upper end depends upon the application, but is seldom greater than 10 KHz.

Good luck.

Radio-cop reply as usual.....

Either answer the guy's question, or use your time more contructively.

While I agree the few watts won't make a difference to the receiving station, I, like most other hams, also get a hard-on watching the Bird meter reach the legal limit! Pairs of 3-500Z's usually need that extra 10-20w (120w total) to achieve max legal limit.

There are more important issues to worry about as far as imd is concerned, like making sure your audio is clean and not over-processed. Poor audio can cause more problems than the extra 20w!

Well, if you're really flush, get a gallon of Dow Corning's 200 fluid with a viscosity of between 50 and 100 Cs. (Pretty thin, but not as thin as that used coat dry flies)

I'm guessing as to price, but a couple hundred dollars should cover it.

it is only illegal if you use it on 11 meters.
These amplifiers are LEGAL for Industrial, Scientific, Medical, Export
or
Licensed Amateur Radio Operators use only.
It is a violation of FCC regulations to operate these amplifiers on
the Citizens Band in the United States.

so whats all the fuss! who's to say what the person buying it,is going
to use it for.RIGHT!!!!

It is up to the person buying the amp to decide how they use it.
Hey there could be a bunch of MAD SCIENTIST EXPERIMENTING out there who
want to
experiment with the amp!

You better check your ham by-laws and FCC rules & regulations... That
amplifier is NOT "type accepted", so ham or not, legal frequency or not,
it is illegal to use. If it can amplify an RF signal over 24 megahertz
on the HF bands, and can do so with less than fifty watts of drive, than
it is disqualified from "type acceptance".

Do you know, right off hand, what the running price is for that five
foot section? I think I have heard of that, it sounds like it may be
perfect... and what the price is for the base plate, if bought
outright....? just curious...

Greetings!

Previous Deal fell thru and this is up for sale again! I have for sale an Icom IC-737 in absolutely MINT condition! Less than 2 hrs transmit time on radio. Includes fast automatic antenna tuner, built in keyer, 100 memory channels, FM board w/ CTCSS, etc...all the bells and whistles! Comes complete with manual and hand microphone! Asking $750 shipped, payable by PayPal.com. Don't pass this up, it's a beauty! I fought with myself for 2 hrs tonight before deciding to relist it, but I really want an IC-756, so I'm saving my $$$! E-mail me if you are interested! Would possibly entertain trade offers on other quality HF rigs in similar condition.

That way looks like it would work pretty well. I think one thing that can help learn the alphabet at first is to send written code on paper and then decypher. I did this in school passing secret notes and I learned the alphabet in a week. After I learned the alphabet everything I saw in print, I would mentally think of what it would be in code. This can help alot after a while as you have to think about code all the time. At the same time you are learning the alphabet start listening to code on a radio, or at least tapes, to get used to the audio version of code. Once you get to where you can spit out any letter from reading or hearing it, you are home free. All it takes to get faster after that is just practice. Preferably on the radio in the novice bands. As it's much less boring than tapes you get your speed up much faster working cw on the radio. I learned the code when I was in the 8th grade. By the next year I was well in the 15-18 wpm range, and I didn't even have a license yet. I practiced copying alot. Thats all it is, just like typing or anything else. Nothing beats real operating for turning into a good cw op. Practice every day a qso or two, and you'll be fast in no time if you keep slowly increasing the speed. MK

I've never heard of that mod. What filter are you using? Icoms are known
for having fairly tight filtering.
It's possible your radio needs an alignment if the lower sideband audio
is alot different than the upper. Say the upper sounds real bassy, and
the lower real tinny. A sign that the carrier osc is off. But if you
have tight filters and you are trying to hear a freq above the cutoff of
the filter, then this would be normal. The average stock SSB filter is
appx 2.4 kc at 6 db down. So you should hear frequencies up to 2400 hz
quite well, but once you pass 2400 it'll drop like a rock. Try sweeping
across this range using a signal generator and you can really see what
your filter is doing. Also a xtal calibrator signal can be used if you
have an accurate readout. If you want better high freq response for say
AM, you would need an AM filter. Say 5-6 kc. MK

It is also a Voltage doubler, makes the 1.5v into 3v for the vx1r, but boy does
it drain the AA cell quickly, great for emergency use. If you really want a
back up batt buy a second Li-ion cell.

2198. FS: Kenwood TS-940SAT

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-15 00:00:00 UTC
From: Carl Sherman <csherman@flash.net>
Message-ID: <39EA201B.D4FA625C@flash.net>
Source record: 70502

This TS-940SAT is in excellent condition both physically and
functionally. It is a late serial number (#20500072). It is a
one-owner transceiver, always dust covered when not in use, and always
kept in a smoke-free environment. This unit has all amateur bands from
160-10 meters and is rated at 250 Watts PEP (140 Watts AM). The power
supply is built in, as is an automatic antenna tuner. There are no
optional filters included. The manual, power cord and the original
double-boxes are included. The price is $900 if shipped (CONUS) and
$850
if picked up. Recently, the rig had a shorted driver transistor in the
Final Unit. The Final Unit (complete board assembly) was replaced, and
the rig was checked out by Avvid in Irving, Texas, an authorized Kenwood
repair facility.

Hi I am curious what the FBA20 battery holder is for the Yaesu Vx 1R.
Is it a sleeve of some sort that holds an AA battery and slips into
the battery compartment where the Lithium-Ion batter normally goes?
It isn't an external battery pack is it?

Also does max power drop to something like 250mW?

Thanks

John

2206. Uniden HR2510 and Chipswitch - MANUALS AVAILABLE - Adobe PDF format! Chipswitch - NEW manual!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-15 00:00:00 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <SceG5.521$%J6.50442@news1.news.adelphia.net>
Source record: 70581

Hi all!

Just thought I'd let you know that there is a new Chipswitch manual out. The one you get/have gotten with the Chipswitch is a bit difficult to read the programming tables. Well, PROBLEM SOLVED! The new manual is designed to look like the Original HR2510, HR2600 owners manual. The programming tables are also very nicely laid out without any confusion.

The manual is indexed, and searchable. If you have a chipswitch, by all means download it!

http://kjv.homeip.net/~hr2510

Click on the chipswitch information link on the left hand side.

If you go to the Radio Service section you can go to the HR2510 model in the Uniden section and download a PDF of the HR2510 owners manual as well. This one isn't indexed as it's basically a lows res scan of the original document. Also worthy of note is that the front cover WAS a tri-fold with the Schematic printed on the folding. This schematic was much too small to scan in. So, don't download it and expect to get it as part of the manual.

The HR2510 PDF manual was laid out in such a way that it can be printed, then folded, and aside from being a little larger than the original you should have a manual that is pretty close to the original.

Enjoy!

Well it seems to be exactly the same here in the UK. I've recently returned to ham radio after a year or so and i was quite suprised by the lack of activity. This seems to apply to all aspects including packet.

Maybe everyone will get bored with the internet and return one day :)

John...

Yes, it just slips into the VX1R's Li-Ion battery port...

And yes, max power does drop to 250 MW at high power...60 MW at low (if I remember right...), and they suggest only running it on low.

Hy-Gain TH7DXX 7-element broadband beam antenna

All Stainless Steel Hardware with Aluminum elements/rods

20 meters 8 db gain
15 meters 8.7 db gain
10 meters 9.6 db gain

On the ground and disassembled into individual elements for easy transport
Boom length = 24 feet, Weight = 75 lbs.
Complete with boom, elements, traps, hardware, and
instruction/construction/assembly manual
Some elements may need work/cleanup and refurbishment of entire beam before
assembling is a must.

Sorry, but this beam can not be easily boxed or shipped.

Pick up only in Atlanta, GA area for $100.

Does anyone have experience with "ham sticks" and/or the Carolina Bug Katcher??????

I need a mobile antenna (for a boat not a car) and am considering these units....

Do they need a ground plane/counterpoise? What kind of signal reports do you get with yours at 100w output???/

In order to get it to work you will need a counterpoise and a ground plate
if you want it to work well, you can ground the other side of the antenna to
the motor try to keep grounds as short as practial, if you are going to talk
on 10or12meters use an Antron they work great in a boat. If its a sale boat
use a dipole cut for the band you want to work and you will get very good
results. 73s

> A licensed amateur can legally build his own gear, including a ten
meter
> amplifier.

I never said that a ham radio operator COULDN'T make any amplifiers, and by the way, I believe the limit is ONE before he has to have type acceptance, but i'll hold off on that one until I look it up to be sure. But the amplifier must be used for 10 meter amplification, not 11. It is against the law for him to sell it to a CB operator for the intended purpose of it being used on 11 meters... And regardless, it MUST be driven with at LEAST 50 watts or more.

yawn once again, I quote...

CITE: 47CFR2.815]

Sec. 2.815 External radio frequency power amplifiers.

(a) As used in this part, an external radio frequency power amplifier is any device which, (1) when used in conjunction with a radio transmitter as a signal source is capable of amplification of that signal, and (2) is not an integral part of a radio transmitter as manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz.

Note: For purposes of this part, the amplifier will be deemed incapable of operation between 24 and 35 MHz if: (1) The amplifier has no more than 6 decibels of gain between 24 and 26 MHz and between 28 and 35 MHz. (This gain is determined by the ratio of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier.); and (2) The amplifier exhibits no amplification (0 decibels of gain) between 26 and 28 MHz.

Source record: 70575

I have a Collins round emblem
75S-3C receiver.
Its in very nice condition, its a
75S-3B S/N 85534 converted
to a 75S-3C (THIS IS A
COLLINS UPGRADE) .
These are the items it has:
1. Weighted Spinner Knob (not
plastic)
2. Collins F-455-FA-05 500
HZ CW filter
3. Filter Cover
4. Skytec (Tubesters)
5. Original tubes
6. Spectronics DD-1C Digital
Frequency Counter (made for
Collins)

7. There is a BEAUTIFUL
receiver addition that includes an
extra Collins F-455-FA-21 2.1
filter.
As you already know this radio
comes stock with a
F-455-FA-21 filter, it now has
TWO. This makes the 75S-3C
receiver have more selectivity.
You are unable to see it. It has
been located in the bottom of the
chassis, under a metal
cover...VERY NICE JOB.
8. I have the manual for the
75S-3C, Tubesters, and
Spectronics DD-1C
9. Original Paint, Knobs, and
feet, no holes or mod's to the
chassis

Price is $1799.00 plus shipping

They have the 3'4" SB25G short base, SBH 3'4" Hinged short base and the 5'
Short base (I don't have the number), but all are listed at for concrete.
Depending on your soil they may work well just set in dirt. I'd set a limit
of 40-50 feet with the dirt base though and guy it well.

It's a good idea to put plenty of crushed rock, or pea gravel in the bottom
of the hole for drainage.If you live in an area where it freezes, the good
drainage is essential.

>alphacentauri@i-plus.net
>

Back when I was a kid, I learned it by sending code back and forth to my neighbor, who was also learning the code. Lacking a partner, get a simple code practice oscillator, a key, some tapes, and just do it. Memorize the characters. It doesn' take all that much to get up to five words per minute.

Then get your license and get on the air. Past 5 wpm, it's best to just make contacts -- it's a lot easier to increase your speed while you're communicating to somebody and making friends, than listening to tapes. Most good operators are more than willing to come down to your speed. Just send a CQ at whatever speed you're comfortable with, and they'll come back to you at that speed, generally.

That's the best way -- use the code to make contacts, and your speed will easily increase.

On the other hand, if all you want to do is get up to 5 wpm to pass your licensing -- well, it's just going to be a little grunt work. But it ain't that hard to memorize 25 characters and 10 numbers. Some people make a big deal out of it, but a positive attitude will go a long way toward speeding the process.

The ARRL has cassettes & CDs to get you up to 5 wpm:
http://www.arrl.com/catalog/lm/

Good luck!

Does anyone have any information about this radio. I need to know how to reset the CPU. It is very similar to a TH-205. The radio is transmitting out of band, I would like to get it back in the band.

TX: 400-420
RX: 400-420

Should be in the standard 430-450 MHz band.

Thanks for any information anyone can provide me.

Please reply or email me at kc5yti@altavista.com

Email Address Is Below !

Brand New ASTEC:
VS3-K0-K2-K3-00
Single Phase 85 - 264 VAC /// 47- 440Hz Input
Three terminals for output:
one 2v @ 150amps
two 5v @ 150amps
three 12v @ 62.5 amps - For Ham & CB Gear

Detailed Specifications On Power Supply:
http://www.astec.com/products/1150.astec.pdf
(Must have Adobe Acrobat installed to view)

This page show a different model for sale:
http://www.newark.com/
Search for "manufacturer" part number and enter "VS3"
for other models then use the PDF (Adobe) specification
chart to compare output watts / amps.

One example is a VS3-C6-C6-20
which is VS3 or 5x8x11 case
Terminal one is "C6" which is 28v @ 32.1amps
Terminal two is "C6" which is 28v @ 32.1amps
The unit on that page is about $2,000

I'm selling this for $120 UPS Shipped

From: David Ausley <dausley@hiwaay.net>
Message-ID: <39EBBA06.9AAFDD38@hiwaay.net>
Source record: 70451

For Sale:

Heathkit HW-101 H.F. Transceiver, matching speaker and AC power supply. Very good physical condition, extra clean inside and out, no mods, the only problem I could see was a dry rotted "o-ring" drive belt for one of the tuning caps. (I have not tried the transmitter, but receive works fine) These pieces have been in clean storage for several years and will make a great addition to anyone's Heath collection. $150 for all (you ship from Alabama)

I'm helping a non-ham, no-internet, friend with this sale, so email me with any offers and I'll pass them on to him.

I have tried that, but I get the feeling that something else needs to be done. Cpu reset or receiver and transmitter realignment. Also I am not sure what the stock jumper settings are. I have attempted many combinations. Any more assistance would be greatly appreciated.

Thank You for the help.

FRS is pretty busy here in the Salt Lake City area. However, I don't see MURS as a serious competitor to Amateur Radio.

Source record: 70519

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

2242. Antenna Mounting Question(s)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-16 00:00:00 UTC
From: Post Here <News>
Message-ID: <3eamus44mq3ude5204q151jvufce5lmtns@4ax.com>
Source record: 70521

I'm getting ready to install an antenna and mast and need info on interference to TV antennas.

The antennas will be the Cushcraft R8 and below that on the mast will be a Cushcraft 128wb 2meter antenna.

Approximately 12 feet on both sides of where my mast will go is these TV antennas.

The 2 meter antenna will be at the same height as the TV antennas and the R8 multiband will be slightly higher.

Will I cause bad interference to these TV antennas ?

If yes, without moving my antennas, how can I resolve this problem ?

The antennas will be connected to a new Icom 746.

There's really no way of knowing until you try it. Partly, it depends on which bands you plan to operate on, which modes you transmit in, which channels you are receiving on your TV, how susceptible your TV is to interference, where your house wiring is located, and a lot of other factors. It's best to just put it up and see what happens. Then you can attack each problem individually, if there are any.

I used to run one of the Cushcraft verticals with a cable tv setup in close proximity and had no problems.

Hello Group !

I have some problems in QRL:

my costumer has a meteosat-receive-equipment (1.7GHz) with downconverter to
2 meters
the problem:
some nearby GSM-Station produces noise that prevents the meteosat-station to
lock the signal
are there any known solutions for that problem (beside insulating the
downconverter against HF) ?

please answer to hewo@chello.at in addition to the group

2256. NEW Amateur Radio search engine! No banners - VERY FAST - RELEVENT RESULTS!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-16 00:00:00 UTC
From: Karl Vesterling <kjv@adelphia.net>
Message-ID: <EHIG5.715$%J6.65684@news1.news.adelphia.net>
Source record: 70535
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi all... I finally finished the Amateur Radio Internet Search engine at this site:

http://kjv.homeip.net/~hr2510

The URL's that are indexed are entirely Amateur Radio related (ok, some CB stuff) so you don't have to worry about encountering information about Presdient Abraham Lincoln when doing a search for information on say a Uniden President Lincoln radio, or worse yet some online classified ad advertising parts for a 1973 Ford Lincoln. The only anomoly I noticed is that some astronomy pages come up in the results when searching for galaxy. This is because a Galaxy radio buf happens to have a page on both topics. The Radios, and astronomy. But aside from that, should be ok. The URL's I've already submitted and indexed mainly have to do with Radio Modifications / alignment procedures, equipment information, etc...

The engine is very low on graphics, and there are no banner advertisements. This is provided as a free service and no revenue is generated from it by exposures for banners, etc et al so please don't regard this post as advertising. I just couldn't find a search engine that would return the information I needed so I created one, and I think you'll enjoy it.

Because it's so low on graphics the bandwidth taken up should be small enough that it won't affect my internet connection. (DSL coming soon anyways)

So Enjoy!

BTW, suggestions for the site and submissions to the engine please send by email to me for now. I won't have time for the next few days to improve the site any as I'm renovating part of my home. (ok ok, I just want to play with the new commercial grade 3/4HP airless paint sprayer I just got, but can ya blame me???) But I certainly can cut/copy/paste information into the URL index file. BTW, indexes are nightly at 03:00hrs Eastern. So it may be a little slow between 03:00 and 03:30. By slow I mean it will probably take 2 seconds or so to return the search results.

2260. Motorola MiTrek

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-16 00:00:00 UTC
From: DrBanzai@alltel.net
Message-ID: <39eb722f.88916302@news.alltel.net>
Source record: 70539

I have recently aquired some old MiTrek Radios. After reading several posts in here, and checking out some great websites, I have determined that I can use them for a volenteer group that I am a memeber of. One problem remains. I got the on a State Surplus Auction. They are old Nebraska State Patrol Radios. They are locked shut, and I have no keys. What's the best(i.e. least damaging) way to get them open?

There seems to be a lot people in here, with knowledge about these radios, I'm sure someone has overcome this issue before.

I would also be interested in and info you could provide me on how to make a repeater, for a business band setup in the 151.xxx Mhz range. I'm looking for a setup like the police use. My walkie talkie talks to my car mounted radio, which them send it out again. Is this possible with one single channel radio, and one antenna or will I need 2 radios(or dual channel radio) and two antennas? Also keep in mind that this is all going to be mounted in a Crown Vic Police Interceptor, so I have a lot of room, but not scads or room.

Thanks for any information!

In case ya'll haven't heard, on July 12th
the FCC created the Multi-Use Radio Service.
It's for people who want to be on the radio
but don't want to have to learn all the rules and
stuff for the amateur service. The difference between
MURS and CB is that MURS will have repeaters, packet,
data, imaging and, like CB, won't have any regulations.
Oh, there is one regulation, you can only transmit up to 2
watts of power. (I got this info from QRZ.com, the like to
the article below).

The full article is here:

http://www.qrz.com/articles/00/10/15/1215251.shtml

My personal opinion (which probably doesn't mean much
to anyone but me), is that the FCC isn't going to stop at the MURS service.
They're just going to continue on, and eventually, the entire amateur
service
will be regulation free.

What's your opinion?

Anyway, the reason for this posting is because most people don't
know about the MURS service.

(I'm probably gonna get tons of spam from this, too.)

2264. Beginning packet: suggest TNC?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-16 00:00:00 UTC
From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <8sg0e3$8bd$1@agate.berkeley.edu>
Source record: 70543

I'm thinking I might like to experiment with packet radio.

I have an FM radio, a couple of computers (386 DOS laptop, Mac PPC, SunSPARC workstation), and so now I guess all I need is a TNC of sorts.

I've read much of primers and faqs at the tapr.org web site.

I wonder if anyone has any suggestions on particulars for the TNC.

I might like to try APRS, as I have a GPS recevier, as well. I also might like to take the show on the road, if I ever get a PalmPilot (thinking about it).

So, I kind-of thought the PicoPacket TNC from PacComm looked nice.

I also have an old 73 magazine article on building the poor man's packet for the Mac, but I can't find the FSK modem anymore. Any other TNC construction articles?

Thanks for any input / suggestions / etc.

73,

Brian,

Stop by any local Motorola shop and they'll have a spare key floating
around. Motorola uses the same key for everything it seems.
If you can't get one, lemme know and I'll send you one. I have about a
hundred of them.

Greetings:

I have a mint condition (non smoker) no scratches AS NEW one year old Yaesu FT-847 with FC-20 antenna tuner for sale in original boxes with original manuals. Here is was it would cost you from AES:

Ft-847 $1,499.99
FC-20 269.99

Total: $ 1769.98

Plus Shipping

Now that is a chunk of change!

I will sell my one year old AS NEW setup (FT-847 AND FC-200 Antenna Tuner) for $1,400 plus shipping costs from ZIP 29609 to your QTH.

I AM INTERESTED in trades. Looking for MINT A FT-990 class rig or similar. DO NOT want a KENWOOD. ONLY interested in Yaesu or ICOM mid top of the line trade ins. Not interested in tube rigs or old rigs.

Thanks for reading.

Cheers,

AL

Hi there,

I am looking for the service manual for the alinco dr599 dual band fm
tranceiver.
We have tryed to use it last year at the YOTA as packet station.
The reception on 70 was so bad that we had to use a yagi to receive the node
(distance 5 mile) so i think that there is a problem with the machine...
If you have a manual ..... the scouts would be happy as will i.

thanks en best 73 dennis pe1nqh.

>
>Can somebody please remind me how to enable this? I seem to remember it's
>just a few button presses.

On the F1T (U.S. model), airband receive has to be enabled by cutting a wire inside the set, and then resetting the microprocessor (dumping all the memories and programming - aarrgghh!!). There are two little wires that are obvious when the radio is disassembled. One enables airband receive, and the other enables transmit from 136.000 through 173.995 MHz. I don't recall which of the two wires you cut to enable airband receive. After the wire is cut, to get into airband mode, you press one of the buttons on the DTMF pad while in receive mode... it's either A or B, but I can't recall which one (I don't have the HT here with me, sorry).

On QRZ.COM, there is a section with oodles of radio mods. I believe the F1 mods are there. It's worth a look. If you can't find them, drop me an email at my home email address k5dh@qsl.net and I can check to see if I made notes in my F1T manual (I think I did).

By the way, you'll be very pleased with the airband receiver! It's more sensitive and selective than any scanner I've ever tried!

Message-ID: <Y24H5.5$W94.1159@dfw-service2.ext.raytheon.com>
Source record: 70406
Cross-posted to: alabama.birmingham.radio.amateur,alt.ham-radio.packet,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy

I have bad feelings about this MURS thing...

What I can see happening on MURS is the same thing that happened on 11m CB. MURS'ers will buy inexpensive 2-meter FM amplifiers at hamfests and connect them between their MURS radios and their antennas. So much for the 2 Watt limit! No one pays attention to the 5 Watt limit on 11m CB either... they use 10 meter amps. With 2m amplifiers so commonly available for such little money, I think this will happen virtually overnight. MURS also allows external antennas. Soon, there will be MURS'ers using modified 2m directional antenna arrays and high-power amplifiers to work bootleg VHF DX.

Someone else has already pointed out that the MURS radios will be merely the existing "color dot" type radios re-hashed (including some of the frequencies that were once "color dot" frequencies, such as 154.600 MHz). This could pose a problem too. Many of your favorite fast food joints, such as McDonald's, Wendy's, and so on, use some of those same frequencies for the two-way radios in their drive-up lanes. Can't you just picture the MURS CB'ers, running high-power amplifiers, giving fits to the people working the drive-up lanes? It's gonna happen, folks!

There are countless thousands of "color dot" radios wasting away in closets and drawers since the advent of cheap and effective FRS radios. FRS offers 14 channels vs. one or two channels, PL tones for a degree of privacy, they cost half or less what the "color dot" radios cost, they offer similar range but the UHF signal seems to pass through buildings better than the VHF does, and FRS radios run on common household batteries instead of the usual NiCd packs. I guess the only big draw for MURS is going to be the ability to (illegally) use big amplifiers and to use powerful antenna systems. MURS will be a boon to the bootlegger, but of no value to the intended users. The FCC has bungled again!

Flame away, folks. I'm wearing my Nomex firesuit...

True, and some of us got in just to fly our RC planes on 6M. But, with good Elmers in the hobby, we can take that Codeless Tech and show him other, wonderful aspects of the hobby that 2m, low-power simplex can't compete with.

In the US it is legal to build any kind of ham gear. You just need to be sure that it is of good design and good RF engineering practice. That means it should not be putting out harmonics and other undesired RF.. Well, most all amps put out some, but you just have to keep them low enough that it does not cause problems to other receivers.

Yes, you can buy whatever yo want. I think there is something in the rules that you can't sell or build to sell but one or two a year or some kind of junk like that but never built one for sell so have not had to really look that close at the rules. You do have a rule book do you not, or you can find them on the internet. The arrl.org site had one online, but it seemed to leave some parts out. Hope they have it fixed now.

I would have to say the sunspot cycle has something to do with this because many are spending more time on the HF bands and not on vhf . I think they are taking advantage of the band openings and are spending less time on the repeaters ...

2291. FS/FT Johnson Viking Ranger II

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-17 00:00:00 UTC
From: Ron Evans <cosmos41@ix.netcom.com>
Message-ID: <39ECE3C8.743E907D@ix.netcom.com>
Source record: 70412
Cross-posted to: rec.radio.swap,rec.radio.amateur,boatanchors,rec.radio.amateur.equipment

Will sell very nice Ranger II for $500 plus shipping or will trade for cosmetically sweet Johnson Navigator plus cash or ???

Ranger II has been modified to operate SSB with the Heathkit SB-10 SSB Adapter. The mod does not affect the front panel in any way. The only visible mod is a pot and two small connectors on the rear apron of the chassis. The mod is easily "backed out" if you choose. Original manual included as well as the 1964 issue of CQ, detailing the modification.

Front panel is cosmetically a 9, and the cabinet is an 8+. Not many of these around in this nice condition! Tubes light and B+ is fine, but no power output. A cinch for most amateurs to have on the air in an hour or so. It was bought in 1963 by the previous owner who was the only owner until I bought it. Increasing job responsibilities and an impending divorce have shot my plans to put this old gal back on the air, so she has to go!

Photos will be emailed to serious inquiries only. First $500 or super clean Navigator plus cash takes it.

Please reply by email only: cosmos41@ix.netcom.com

Thanks!

Ron Evans - K5MVR (since 1957)

K5DH,
I agree, MURS is going to be subject to all the abuse that
other bands are subject to. It's a shame too, it could be a
fantastic oportunity, if everybody 'played' fair. There's
one 'happy' thought, though. Since it's VHF, it should be
easy to 'DF'.

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Rally The Sheep,
Do you really see MURS as being threatening at all
to amateur radio? I don't. Seems more like the manufacturors
trying to revilalize their 'color dot frequency' radios.
I can see where there could be lots of interest in this.
As I read the proposal, it allows voice, and digital modes,
repeaters, and paging. By the way, it's 2 watts ERP, so
that opens up a bunch of antenna options. Interesting
options...
'Doc

2301. Re: Waveform for a battery charger

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-17 00:00:00 UTC
From: Markus Lenggenhager <Markus.Lenggenhager@philips.com>
Message-ID: <39EC2145.9AEE9554@philips.com>
Source record: 70472

For NiCd and NiMH batteries, the so-called reflex chargers apply a sequence of positive (charge) and negative (discharge) pulses. This is said to have a positive effect on the chemistry and internal impedance of the battery.
http://www.galaxypower.com/ offers a choice of ICs implementing this charging method. I just completed a reflex charger based on their ICS1702 chip and must admit it "refreshed" even very old cells, and after a few cycles, most of them were close to their nominal capacity again.
Current waveforms in detail (applies for my particular design)
- "fast charge" phase: cycles consisting of
a) +C/2 during about 1 sec
b) -1.25C during 5ms
- 2-hr "topping charge" phase:
same as above, but 4sec pauses between cycles
- "maintenance charge" phase:
same as above, but 20sec pauses between cycles

Several companies are offering complete reflex chargers, but either they are not very flexible (# of cells, capacity range) or too expensive. Enjoyed building my little charger, based on a schematic developed by Siegfried DJ3QU (a real expert in this field), on a piece of "Veroboard" PCB. All the power components are of course sitting on a large heatsink.

73, Markus HB9BRJ

Hello Mark,

You're joking of course. Anyway they are not radar as they do not
provide RAdio Direction And Ranging information. They are in fact CW
Reflection Doppler speed measuring devices, same as we used at Woomera
rocket range only ours were 100 times larger and worked at 104MHz, if
I remember correctly. used those glowing things called valves.

From: Gary <gbaker@pacifier.com>
Message-ID: <39ec3622$1_1@news.pacifier.com>
Source record: 70478

Hi all,

I reciently purchased a yaesu ft-8100 duelband radio and just got through hooking it up in my truck. Radio seems to work fine but notice the power out is a bit low. I am getting around 20 watts out on 440 and 30 watts max out on 2 meters.
My previous radio in the same vehicle was the ft-90R.
The 90R was putting out 35 watts on 440 and 55 watts on 2 meters with the same power cable/antenna.

One thing I did notice is that the 90r's voltage meter read 14.1 volts and the 8100 reads 13.2

Could I turn up the power a bit to get the full 35/50 watt output the specs say the radio will do or is this a adjustment that should not be messed with?
Anyone else notice this with the 8100??
Any help would be appreciated
73

Thanks for reading this!

I have recently acquired a Radio Shack HTX-10 10m radio. These sets were not available in the UK so I consider myself fortunate!

However, I'm in need of some service information to allow me to check out the radio, as it appears to have been tampered with internally. So if anyone has a service manual, I would be very grateful for a copy. Failing that, could anyone tell me the method for aligning the TX and also the method for calibrating the "S" meter? My set is only producing about 10 Watts, so it probably needs a little work. It appears that there are a couple of trimmers for setting the power output but I'm loathe to do any further work without more information. A schematic would be a great help!

If you can help, I will gladly pay any costs involved.

Thanks,
Al Bolton

If this is the radio I'm thinking of, then 10 watts was all it got at maximum power.

Additionally, if you feel it was tampered inside, be careful that someone didn't modify it to run on 11 metres (American Citizen's Band Radio)!!

Good luck,

Robert

Source record: 70491

This unit is very, very sensitive to input voltage. If you use that power cord that comes with the radio you will get over a 1 volt drop in it and output will fall. I use 10 ga. wire and about 3 ft only. Some people have the radio go into a terrible audio chatter and then stop xmitting when they turn the engine off and the volts drops below 12. I've even noticed a .5 volts drop in the short section of power cord from the radio to the power connector. I'm going to replace that with either 12 or 10 ga. too. I did notice too that the internal volts reading thing is a good relative type meter but not all that accurate. Better to use an external meter. I was getting 18 on UHF and 28 on VHF before my changes. There was an article in a recent CQ mag relative to all this. They claimed that you would get an additional 5 watts out by replacing that short section of power cord from the radio to the connector in ANY VHF or UHF mobile. I thought they were way off on this but now I wonder. We'll see when I get mine changed.

Hi Robert,

The set is rated at 25 Watts on SSB/FM, and 7 Watts on AM. Talking to other users reveals that 25 Watts is the correct output, indeed many produced in excess of this.

It apparently isn't possible to convert the HTX-10 to 11m. However, the previous "owner" had been inside trying to improve receiver sensitivity, as there is evidence of broken cores and disturbed coils.

Thanks for your posting,

Regards,
Al

I used to run the radio all evening while in the ham shack.
If I took a nap, I'd have the rig tuned to a CW QSO.

I went from just passing the 13 WPM for General to over 30 in about a month.

Past 13 you start hearing word sounds and parts of words.
you eventually get to the point where it's like listening to some one talk
and you have to learn how to spell as you don't hear the letters.
"eventually" you, like a typist", start copying subconsciously. (probably
some where around 15 WPM).

One day I realized that my hand was sending the CW as I was thinking of what
to say. I was so fascinated that I stopped thinking and started watching my
hand...which of course got lost right away. It was a strange feeling
though, to watch that hand sending CW on the keyer. It was as if it
belonged to some one else.

Once you reach that subconscious level copy it's amazing how fast your speed
increases with consistent use.

> Most good operators are more than willing to come down to your

Amen! It's about 90% attitude. There is no real reason for not being able
to do the 5 WPM with some consistent practice, unless the student convinces
them selves that it is difficult.

2333. Question? - MFJ-9420/40/75 Travel Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-17 03:41:02 UTC
From: compcnsult@aol.com
Message-ID: <20001016234102.03056.00002140@ng-fj1.aol.com>
Source record: 70461

Has anyone had any experience in the operation of these travel radios from MFJ. This is the SSB QRP rig they sell for 75, 40, and 20 meters. I thought about buying one just to have a QRP rig. I would a 1/2 wavelength G5RV antenna which has worked with other HF rigs.

I thought about buying the 20 meter version. Did the sensitivity and selectivity of the receiver seem adaquate???

Any info would help. Post here or email me directly, Hey how about both.

2334. WTD: Worn-Out Nixie Tubes

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-17 04:08:34 UTC
From: afranzman@aol.compute.com
Message-ID: <20001017000834.05079.00002314@ng-fy1.aol.com>
Source record: 70462

You may have seen my earlier posts on buying/trading Nixie display tubes with digits over 1 inch (25mm) tall, or my other posts regarding the possibility to restore such tubes that have been blackened by long use or excessive current.

Though I am still seeking more of the large size Nixies, I now have sufficient information to begin experiments into the possibility of Nixie tube restoration.

For my experiments I need Nixie tubes that are no longer useful due to darkening of the glass, and/or failure to fully and reliably light one or more digits (up to and including complete failure to light at all.) I can't use tubes having physical damage such as cracked or broken glass, or pins broken off.

Due to the nature of the work necessary, I can only use tubes with digits 5/8 inch (15mm) tall or larger.

Anyone having such tubes is requested to contact me regarding donating or selling your Nixies to me.

If desired, I will pay reasonable shipping costs and a nominal price per tube depending on what you have to offer.

Please contact me by email. See below for a hint to get past my spam block.

Alan "A.J." Franzman

2335. Beginning packet: suggest TNC?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-17 04:25:40 UTC
From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <8sgkc4$c8m$2@agate.berkeley.edu>
Source record: 70463
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

I'm thinking I might like to experiment with packet radio.

I have an FM radio, a couple of computers (386 DOS laptop, Mac PPC, SunSPARC workstation), and so now I guess all I need is a TNC of sorts.

I've read much of primers and faqs at the tapr.org web site.

I wonder if anyone has any suggestions on particulars for the TNC.

I might like to try APRS, as I have a GPS recevier, as well. I also might like to take the show on the road, if I ever get a PalmPilot (thinking about it).

So, I kind-of thought the PicoPacket TNC from PacComm looked nice.

I also have an old 73 magazine article on building the poor man's packet for the Mac, but I can't find the FSK modem anymore. Any other TNC construction articles?

Thanks for any input / suggestions / etc.

73,

For sale to good home! I have the optional filters for SSB and CW for the FT-990. $70 a piece shipped. I also have the IF-232C CAT interface for the 990, $50 shipped.

In addition if anyone is interested I have a brand new, still under warranty, MFJ-564 Chrome Iambic Keyer. This is $30 shipped.

I will let all items go with a 30 day money back guarrantee with no questions asked as long as they are shipped back to me in the same condition as I shipped them to you in. All will be shipped UPS and sufficiently insured.

If anyone wants all three four pieces I will sell all for $180 ($40 discount).

Thanks for reading this post.

Source record: 70468

Chuck:

I bought the 20 meter SSB unit two years ago and have used it on three vacations, and I was very happy with it, considering the cost. There are a lot of good points: it's small and very light, uses miniscule power (easy for battery use), has no complicated digital circuits to fail, has super audio processing, and pretty good receive audio. As far as sensitivity and selectivity go, it won't compare to a "full featured" rig like the IC-706 MKIIG, but all-in-all, it hears surprisingly well. On the "down" side, the bandspread is very tight--a touch of the dial moves the frequency quite a bit, you can only tell your frequency within a few kHz, and there is a small amount of drift. But the radio weighs about the same as a can of Coca Cola, and costs less than just the "recommended" MC-80 microphone for my TS-870! It's the best "bang for the buck" for portable, unless you want to move into the price range (and power consumption) of the '706, the FT-100, the Alinco DX-70T the SGC 2020, the Ten Tec Scout or the Elecraft. All fine radios, but maybe overkill for what you need.

I used the radio on the East Coast on two vacations (NH and PA) and was able to work Europe, SA, and some Asia, plus several states. 12 watts and a low dipole is a challenge, though, when you're used to more. I took it back-packing here in California with a small battery pack and was able to work a few stations in a very short time with a dipole hung between some bushes. Hooking up to a tri-band beam at 50' at home, I can work the world!

You might consider using just a simple dipole instead of the G5RV. It's smaller (34' vs. 105'), will probably will match better, and is much easier to hang in a portable situation.

I eventually bought an IC-706MKIIG for my portable work, but justified it because I needed a VHF/UHF radio at home (well....that's what I told the XYL :~))...I really wanted more bands and power, but I still want to keep the MFJ for emergencies, very light travel, back-packing, or any place where battery power is all you can use.

Good luck and 73!

Not quite correct regarding the freq. coverage. They do cover the 11m CB band - I acquired one from the estate of a deceased family friend who was a CBer and it tunes from about 26.920MHz to the top of the 10m band.

2343. FS:GPS antennas,Neat Item, $55.00, Free Ship

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-18 00:00:00 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39EE05FD.9895FA38@home.com>
Source record: 70349

I have for sale some real neat GPS antennas. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPSII,II+, III+ or any Garmin or
other GPS unit that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. BNC to BNC jumpers up to 10 feet are also available for a
small additional charge. Will ship internationally, buyer pays full AIR
mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas
orders. USA orders can pay with US postal money orders-Western Union
money orders and will ship in a few days, personal checks when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

Dear Friend:

Do you need a change in your life?

Do you remember when the entire world seemed like it was
yours for the taking?

Do you remember a time when all of your hopes and dreams seemed
like they were attainable?

First of all, let's be honest. You are not going to earn $50,000 in
20 days. It just isn't going to happen. Anyone who tells you that
you can, is not being truthful. But, let me tell you about a plan
that can possibly make all your dreams come true...keep reading!

****

I would like to tell you about a plan that has changed my life.
Take a calculator and figure in the worst possible scenario. Decide
for yourself. If you decide that you want to take control of your
life and move forward...that is your decision.

****

Here's the step by step plan summary.

1)You order the 4 reports listed below ($5 each). They come to you
by email.

2)Save a copy of this entire letter and put your name at report #1.
Move all other names down. (You will be removing the person at the
level 4)

3)Use any of the hundreds of bulk email services out there.

4)Orders will come right to your door. Simply email them the report
they ordered.Isn't that about as easy as it gets???

****

Your cost to participate in this program is practically nothing
(surely you can afford $20 and initial bulk mailing cost). You
obviously already have a computer and an Internet connection and
e-mail is FREE!

The primary method of building your downline is bulk email.

Let's say that you decide to start small, just to see how it goes.
Let's assume that you and all those involved email out only 2,000

programs each. Let's also assume that the mailing receives a 0.5% response. The response could be much better. Also, many people will email out more than 2,000 programs. With a 0.5% response, that is only 10 orders for Report #1. Those 10 respond by sending out 2,000 programs each for a total of 20,000. Out of those 0.5%, 100 people respond and order 20,000. The 0.5% response rate to that is 1,000 orders for Report #3. Those 1,000 send out 2,000 each for a total of 2,000,000. The 0.5% response rate is 10,000 orders for report #4. That is 10,000 $5 bills for you. CASH!!!

****

Your total income in this example is: $50+ $500+ $5000+ $50,000 for a total of $55,550!!!

****

REMEMBER FRIEND. THIS IS ASSUMING 1,990 OUT OF THE 2,000 PEOPLE YOU MAIL TO WILL DO ABSOLUTELY NOTHING AND TRASH THIS PROGRAM!!! DARE TO THINK FOR A MOMENT WHAT WOULD HAPPEN IF EVERYONE, OR EVEN HALF MAILED OUT 100,000 INSTEAD OF 2,000. Believe, most people will do just that, and more!!!

Friend, you do the math. You look at the opportunity, if you decide that you would like to participate in this program, the decision is yours.

Recently, the Federal Trade Commission has tried to stop chain letters which promise you will make tons of money by participating. Such chain letters are NOT legal because of this reason. This new program complies with all the rules.

To be legal, a chain letter must offer a product and must not promise you will get rich by taking part. If you look at the program, do the math and decide that you will make money, it is your opinion. No such claim is here.

However, I do strongly encourage you to do the calculations. Figure out the worst possible response and see how it calculates.

Your orders come right to your door and you send your reports via email. You are not involved in personal selling.

You do it privately in your own home, store, or office. This is the EASIEST plan anywhere. It is simply order filling by email.

Order the four reports shown on the list below. You can't sell them if you don't order them!!!.

For each report, send $5.00 CASH, the NAME & NUMBER OF THE REPORT YOU ARE ORDERING, YOUR EMAIL ADDRESS, and YOUR NAME AND RETURN ADDRESS (in case there's a problem). MAKE SURE YOUR RETURN ADDRESS IS ON THE ENVELOPE IN CASE OF ANY MAIL PROBLEMS!

Report #1 will tell you how to download bulk email software and email addresses so you can send it out to thousands while you sleep. Remember that 50,000+ new people are joining the Internet every month.

By the way, there are over 50 million email addresses with millions more joining the Internet each year, so we don't worry about "saturation". People are used to seeing and hearing the same advertisements every day on radio/TV. How often have you received the same pizza flyers on your door. Then, one day you are hungry for pizza and immediately recall the flyer. Same thing with this letter. I received this letter many times- then one day I decided it was time to try it.

This program will not require you to come into contact with people or take any telephone calls. Just follow the instructions.

There is no guarantee either stated or implied that anyone participating in this program will earn $50,000+. (You must include that statement to make this legal.)

******* TIPS FOR SUCCESS *******

TREAT THIS AS YOUR BUSINESS! Be prompt, professional, and follow the directions accurately. -- Send for the four reports IMMEDIATELY so you will have them when the orders start coming in because: When you receive a $5 order, you MUST send out the requested product/report.

It is required for this to be a legal business and they need the reports to send out their letters (with your name on them!) -- ALWAYS PROVIDE SAME-DAY SERVICE ON THE ORDERS YOU RECEIVE. -- Be patient and persistent with this program.

****
Get started TODAY!! Notes- ALWAYS SEND $5 CASH (US CURRENCY) FOR EACH REPORT. CHECKS NOT ACCEPTED. make sure the cash is concealed by wrapping it in two sheets of paper. On one of those sheets write: (a) the number and name of the report you are ordering, (b) your e-mail address, and (c) your name and postal address.

FS: Very nice condition MSR-8000 HF tranceiver. This is the last one I have. It is digital readout electronic tuning, has memories, covers 1.6 thru 30mhz continuous, USB, LSB, AM, CW, RTTY modes, 125 watts output continuous, requires 12vdc for power, includes manual. These commercial quality tranceivers are very ruggedly built and are commonly used in AM broadcasting in South and Central America as a driver/exciter of high power broadcast amplifiers. Includes manual, $1250. Call Mike at (979) 693-1461 or email to: gspubl@tca.net

2350. Re: Radio Shack HTX-10-service info or schematic needed.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-18 00:00:00 UTC
From: aj.bolton@virgin.net
Message-ID: <39ee1350.43431331@news.virgin.net>
Source record: 70356

I stick by what I said, and I have spent quite some time researching this. The HTX-10 CANNOT be expanded as is. If you trawl through the Newsgroups and mods sites you will see that there are some differences between the HTX-10 and the radios you mention, although broadly speaking, the HTX-10 is one of a family of clones.

The HTX-10 has firmware which does not allow the the standard version to be modified for wide band coverage. I did mention that there is supposedly an export version but where it was exported to I don't know, it certainly wasn't the UK!

However, if you can point me to a site or show me how to do it I would be interested and would eat my words!

Now I STILL need the service info!!! This is very interesting talking about 11m mods but all I really want is some test and alignment info!

HELP!

Regards,
Al

Hello,

This excellent Mirage D26N amp is new, no scratches, dents or dings. It works perfectly; 12 Vdc, overdrive high-temp protection for 425-450 MHz; 2 watts in, 60 out. "N" connector. I purchased it about a year ago and used it three times, rarely getting on 440 from my home QTH. Includes manual. Will ship insured, priority mail for $175 firm, includes postage/insurance. (You'll pay $250+ for the same thing new). Please reply to this email address and I will get back to you same day.
Thank you,
Harold, N2RLL

I am amazed at these two replys. I have an HTX-242 in my wife's Suburban
that performs better than my Kenwood in my Chevy pickup. Absolutely no
intermod problems at all and I live in one of the highest RF level areas
(lots of cellular, two-way and paging - 2 sites - within 2 blocks) of town.

IMHO FCC isn't like say BATF. If they think you screwed up they
generally send a letter saying so and demanding an explaination vs
sending a SWAT team, as you'll see by perusing their enforcement logs
at: <http://www.arrl.org/news/enforcement_logs/>

Going to the source, you can find the reg's related to amateur service
at:

<http://www.access.gpo.gov/nara/cfr/waisidx_99/47cfr97_99.html>
or
<http://www.arrl.org/field/regulations/news/part97/>

97.315 and .317 relate to amplifiers.

Beyond that, 47CFR2.815 says.
(a) As used in this part, an external radio frequency power
amplifier is ....
(b) After April 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or
lease), or import, ship, or distribute for the purpose of selling or
leasing or offering for sale or lease, any external radio frequency
power amplifier or amplifier kit capable of operation on any frequency
or frequencies between 24 and 35 MHz.....
(c) No person shall manufacture, sell or lease, offer for sale or
lease (including advertising for sale or lease) or import, ship or
distribute for the purpose of selling or leasing or offering for sale or
lease, any external radio frequency power amplifier or amplifier kit
capable of operation on any frequency or frequencies below 144 MHz
unless the amplifier has received a grant of type acceptance in
accordance with subpart J of this part and subpart C of part 97 or other
relevant parts of this chapter.......
(d) The proscription in paragraph (b) of this section shall not
apply to the marketing, as defined in paragraph (b) of this section, by
a licensed amateur radio operator to another licensed amateur radio
operator of an external radio frequency power amplifier fabricated in
not more than one unit of the same model in a calendar year by that
operator provided the amplifier is for the amateur operator's personal
use at his licensed amateur radio station and the requirements of Secs.
97.315 and 97.317 of this chapter are met.

(e) The proscription in paragraph (c) of this section shall not apply in the marketing, as defined in paragraph (c) of this section, by a licensed amateur radio operator to another licensed amateur radio operator of an external radio frequency power amplifier if the amplifier is for the amateur operator's personal use at his licensed amateur radio station and the requirements of Secs. 97.315 and 97.317 of this chapter are met.

The full text is at
<http://frwebgate4.access.gpo.gov/cgi-bin/waisgate.cgi?WAISdocID=7773830697+23+0+0&WAISaction=retrieve>

You can search the whole Code of Federal Regs at
<http://www.access.gpo.gov/cgi-bin/cfrassemble.cgi?title=199847>

Hope this helps clear the fog.

Well, if you have an amateur license, you can build your own 10 meter
amplifier and operate it on 10 meters. Or buy one, and do the same.
Either option is legal.

If you don't have an amateur license, I doubt that anyone is going to
stop you from building a 10 meter amplifier, but you cannot operate
it, and I doubt that you can sell it, either.

What don't you understand? How are the "big government tyrants"
interfering with the personal enjoyment your your hobby?

I have FOR SALE, an MFJ-9046 six meter transceiver in MINT condition. Have only had it a few months. I'm selling cuz I just got a new Alinco DX70 which has 6 meters along with HF. So really don't need the MFJ any longer. Mike, DC cord, manual and orig. box. $179 and I will pay for the PRIORITY MAIL shipping and insurance. 73, Bill - WA8MEA, QRP Club Station - KC8BCR - E-mail to: kc8bcr@ziplip.com

Honest opion? They are awful and prone to skip frequancies when using the VFO as they get older (3 months). VFO seems to to not be a self cleaning type. Also they are Terrible mobiles. They have absolutly no IMD rejection at all. Not so bad if you live in an electricity, cel/pager tower, or repeater free area but otherwise worthless as a mobile. I have a 212 now and 2 good friends of mine have the 242's and cannot use them in the mobiles because of the intermod. I use the 212 in the shack but use the
FT 100 for 2 meter mobile work. Just MHO on this subject.

>
> annick_100@hotmail.com
>
> I have had the 242 in my mobile for a few months now, bought it when they
were at $199. Very little intermod on mine, although the receive audio
could be a little louder. Excellent transmit reports, good receive also. I
bought it because it was one of the few mobiles on the market that would fit
in the space I had available. And the $200 price tag didn't hurt a bit.
Backlit mic would have been a plus, but for the price I'm not complaining.
If you are looking for a low cost 2m mobile, I wouldn't hesitate to
recommend it.

Howdy Mark!

I have available a Kustom Signal Electronics radar gun.
Model TR-6 antenna s/n 2270
Model TR-6 indicator s/n 2206

This is a two part system, the antenna unit is clamped to a partially
rolled down window and the indicator is put on the dashboard.

12 vdc 10525 MHz less than 2A

The antenna and the indicator are black colored (well duh!).
You plug it in to the cigar lighter, point it at the incoming and
read the speed. If the speed is above the thumbwheel setting,
you get an alarm and the peak speed reading.

Comes in a black suitcase 19.5 x 8.5 x 14 inch...~18 pounds net.
Cables included from cigar lighter to indicator and antenna to indicator.

Price $75.00 US and you pay shipping from Littleton, Colorado, USA
(Suburb of Denver)

And Yes, it is a doppler radar unit I bought at a obsolesence sale at
the local army base. Estimated age...25-30 years.

Let me know if you are interested.

Best regards,

Jack

BTW The FCC does not restrict this device (legally) because it is
transmitting
in the ISM bands (industrial, scientific, medical) at the allowed power
levels.
HOWEVER, your local laws may require a license or a VERY good reason.
Good luck

Jack

2384. Re: Radio Shack HTX-10-service info or schematic needed.

Are you sure you are not referring to the older HTX-100. The HTX-10 is relatively new and, as I understand it, has different firmware embedded in the microcontroller for their CB and 10 meter versions, making it nearly impossible to convert without reverse engineering the firmware and programming a new micro.

Before you buy.

2385. FS: ICom IC-Z1A dual band & accessories, and more

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-18 06:11:30 UTC
From: Robin Panda <satandog@hotmail.com>
Message-ID: <39ED3F3B.FAF5DDF2@hotmail.com>
Source record: 70432

Don't like the prices? Make a better offer! This goes for everything.

I'm sick of watching the value of these go down while I sit on them. Add shipping as desired (or take a road trip to Minnesota). I can take pictures or give you a better description, just email me. Local and larger orders get first pick, otherwise it'll go the the best (reasonable) offer I get before next Wednesday (8/25). I'll ship what needs to be shipped on Fridays/Saturdays. I'd prefer paypal (www.paypal.com) for payment as it's faster, you get $5 for signing up and verifying (say satandog@hotmail.com refered you please) and since I'm verfied their fraud protection will give you your money back should you not get what you bought from me. Otherwise I'll take money orders, cashier's checks, and (if you don't mind me waiting for it to clear) personal checks. Of course cash is welcome, but if you aren't local and need to mail it, I'm not responsable for it.

ICom IC-Z1A 2m/70cm dual band amateur radio with detachable microphone/speaker, rechargable battery, battery case for AA batteries, antenna, AC adapter, manual, and magnet mount antenna. $150

Sun stuff:

Tatung Super COMPstation 20s
(A SS20 clone that uses normal Narrow Drives, W floppy)
8 16MB Dimms
SM 40 CPU
ZX 24 bit 3D Framebuffer
2 540MB IBM SCSI Narrow Hard Drives
$405
If you only want part of the above system, I'm asking $130 for the base system (with floppy drive, rails for hard drives), $140 for the Dimms or $20 each, $25 for the CPU, $100 for the ZX, and $10 for the drives. I'd perfer to sell the system as a whole if possible.

TurboGX Framebuffer $40

13W3 Monitor Extension cable (13W3M to 13W3F, might also work for monitors without built in cable) $10

Sun Keybord/Mouse extension cable $10

Sun "Compact 1" Type 5 mouse $10

Microspeed Sun Keyboard (I think the key layout matches a Type 4) $10

Other Stuff:

Original Palm Pilot with dock, manuals & software, upgraded to 1MB of memory $20

Philips Velo upgraded to Windows CE 2.0 with 12MB of ram, built in 19.2Kbps modem, dock, software, and manuals. $100

Macintosh modem cable. $10

Quicktel Xeba 28.8Kbps external modem. $10

IBM Pentium motherboard with P-90, 256K cache, and S3 Video (uses an AT power supply, but a riser card is needed for any PCI or ISA slots). $10

Cheap Stuff:

$5 gets any/all of the following (I'm not shipping unless you order something else) please don't take what you won't use. These are also AS-IS.

ISA IO controller with 1 IDE, floppy, parallel, and 2 serial ports.

Avance Sound ISA PNP Sound Blaster 16 sound card with drivers.

Computer audio equalizer/amplifier, it takes up a 5 1/4 bay, has a headphone port on the front and takes a headphone input and has 2 left and 2 right RCA outputs on a panel that fits in an expansion slot.

14' thinnet (BNC,10b2) cable with 3 T's and 2 Terminators.

Internal SCSI narrow terminator.

Parallel to IDE adaptor (needs a 12V supply, you can have the case that it came in if you trade me an external SCSI case with HD50 ports).

3Com EtherLink III PCMCIA ethernet card (has no dongle and is badly banged up, but Windows finds it when it's inserted).

I hope you found something you want.
Robin

2386. WANTED Alinco DR599 service manual

Hi there,

I am looking for the service manual for the alinco dr599 dual band fm
tranceiver.
We have tryed to use it last year at the JOTA as packet station.
The reception on 70 was so bad that we had to use a yagi to receive the node
(distance 5 mile) so i think that there is a problem with the machine...
If you have a manual ..... the scouts would be happy as will i.
If you can help me pse send me a @mail at pe1nqh@zeelandnet.nl

thanks en best 73 dennis pe1nqh.

Source record: 70301

If you have an early TS-570 D you may need to have it upgraded. The early ones had batteries lasting from 4 weeks to a full year if you are lucky. There is a mod done by kenwood and several guys had ti done for free by Kenwood as it is a serious flaw. The Battery should last from 5 to 7 years. If you got yours used the previous owner must have had a old one.

2390. HEIL / ICOM 706 Promotion Question ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-19 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <20001019162614.14654.00000524@ng-ct1.aol.com>
Source record: 70302

What is the model of the FREE Heil headset promotion for the Icom 706 Mk IIG ?
The dealer said it is the same as Heil sells for $130 but the headset in QST
looks far different than the ones on the Heil Website. My guess is that it is a
cheaper model that doesn't have either of the Heil voice elements in it bt
still works.
Any one out there have any more info ??
Thanks, Tom

2391. F.S. IC-765 Excellent Condx

Source record: 70303

Hi Gang,
I've decided to part with my IC-765 as I seem to be spending all my time playing with vacuum tube gear lately. For those unfamiliar, the IC-765 has a built-in power supply, automatic antenna tuner, band stacking registers, DDS, etc. I am a non-smoker and the original owner of the radio. The rig has both optional 250 cycle filters in addition to the standard 500 cycle filters. The radio has the voice synthesizer option as well. The passband tuning mod was professionally done by Adam AB4OJ, net controller on the Icom User's Net. The radio is in excellent condition physically and electrically. You will receive both the owner's manual and the service manual. I have all of the original packing material and cartons to insure safe shipping. Asking $1200 plus shipping.

73,
Steve W2ZR

>Hello,
>Can anyone please help me identify a three lead semiconductor type number:
>GE 044H.
>It is used in a switching power supply.
>TIA, Denzil G3KXF.

Check those tired eyes. Could it be a GE D44H. GE made the D44H series.
There should be digit after the H which refer to Vceo voltage and hfe. 1,2
= 30VDC 4,5 = 45VDC 7,8 = 60VDC 10,11 = 80VDC. It is an NPN 10AMP 50WATT.
hfe=35 for 1,4,7,10 hfe= 60 for 2,5,8,11. FT= 50 MHz. Hope I'm right. I
know I sure need the magnifing glass alot these days, D45 are PNP
complement. 73 Tom WB6IQD

2396. WTB: Bird 43 wattmeter, slugs

That is easier said than done as I am in the UK! Although we do have
Radio Shack here in the UK, it is called "Tandy" and basically sells
mobile phones, batteries and a few other lines. It does NOT provide
service info for US equipment and it is generally rather useless.

I don't really need the full manual anyway-just a few items of
information.

If I can't find what I need then I will contact RS in the US and see
if they will send me the manual but last time I tried to do that they
would not.

Then I'd say buy it, used, if that's what you find, and fix it. Or
build from scratch. There are plenty of amplifier projects in old ARRL
Amateur Handbooks you can buy for a song on eBay. Then, operate it
within whatever your licensing constraints might be.

Have a good one,

HAMFEST October 29, 2000 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - October 29, 2000

LINDENHURST, LI - NY

On October 29, 2000 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Walter Wenzel KA2RGI at 631 957-0218 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. Wife's and children under 12 admitted with no charge.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam session. Current ARRL/VEC fee is $ 6.65,
exact change is appreciated.

Talk-in will be via GSBARC Repeater on 146.685 -600 136.5 PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 136.5 PL required. You may also write to:

W6AHA & K5QWG offered sound advise: go for it, and quit worrying! If what I have seen in the FCC's enforcement logs is any indication, then nobody who is trying to operate legally has anything to worry about, even if they accidentally break some rule. Suppose, for example, that your new amp generates a spurious signal that interferes with some other service. FCC's usual response would be a stern letter saying that "evidence before the FCC" indicates that you are interfering with service XX and demanding that you stop; which I'm sure you would be glad to do. The letter would likely go on to ask you to explain why this occurred and how you plan to avoid it in the future. It will prolly also give you the name and phone # of the FCC agent and ask you to call for clarification. Thankfully, I have never gotten such a letter, but I certainly wouldn't let fear of doing so keep me from lawfully enjoying my hobby. Each government agency seems to have its own culture. Some, like BATF and DEA, seem eager to break the law themselves. Others like FCC honestly try to help people to obey the rules, punishing only those who refuse to do so. Let us know how that new amp works.

If you have a metal boat, how about a whip and coupler? If you have a fiberglass power boat, you could still go with a whip type antenna and coupler but you will need to install a counterpoise system to take the place of your "vehicle" metal. If you have a sail boat with a tall mast, you could put up a dipole, but this would be an inverted V and you would likely get better dx performance from loading the back stay and using a coupler like an SGC 230. I put a 102" CB whip and Icom AH-4 with 706MKIIG on my 14' aluminum fishing boat and it works great!

2421. FS:Neat antenna for your Garmin GPS unit, L@@K!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-19 02:23:16 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39EE5A97.D5A9A0C6@home.com>
Source record: 70367

I have for sale some real neat GPS antennas. Please check
out the 3 pictures for full information. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin GPSII,II+, III+ or any Garmin or
other GPS unit that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. BNC to BNC jumpers up to 10 feet are also available for a
small additional charge. Will ship internationally, buyer pays full AIR
mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas
orders. USA orders can pay with US postal money orders-Western Union
money orders and will ship in a few days, personal checks when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest!

Please check
out the 3 pictures for full information on these GPS antennas. Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPSII,II+, III+ or any Garmin or other GPS unit that provide power up
to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. BNC to BNC jumpers up to 10 feet are also available for a small additional charge. Will ship internationally, buyer pays full AIR mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

Well, for an example: I have seen various amplifiers in need of repair for a steal at local flea markets, which I would love to use as a project to rebuild and operate lawfully by FCC guidelines- BUT- I'm afraid that some technicality will get me in legal trouble, such as the "type acceptance" issue. I simply don't have the money for a turnkey "plug and play" name brand amplifier, but I feel it is within my capabilities to put together a relatively clean amplifier from salvage parts that I can hopefully find (again) at the aforementioned flea markets. This would certainly be a beneficial learning experience for me, but I certainly would not want to risk losing my equipment or license for a technicality of one sort or another.

Not to worry Paul. If you have a license, you can build and operate an amp on any band you are licensed for and you don't need FCC Type Acceptance, unless you are a commercial manufacturer. Lots of hams home-brew their own amps with the full blessing of the FCC.

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

> Would this work?

Well, you certainly reduce your risk of detection whenever you limit where your signal travels. In fact, this is one of the main cornerstones of secure military communications now. The use of higher frequencies, and highly directional antennas, right off the bat reduces the chance that others can easily detect, monitor, or locate, your signal. The use of the very low power often associated with those higher frequencies and highly directional antennas reduces that risk even further. And, of course, the military also goes the next step of adding encryption to the mix also.

Anyway, getting back to your specific example, by attempting to communicate with only a single point (the other family), you task certainly does become somewhat easier. While I'll assume your system would work, the only problem I see with your example is that there would be a lot of antennas in the air. And the more antennas you have in the air, the more chance that someone will just stumble across one just walking through the woods. And, if those quad antennas are located, they point right to your location, and the location of the other family.

In your case, the best bet for point-to-point communications would be to use very high frequencies (microwave) with small highly directional dish antennas (as few as possible). The small antennas would be easier to hide, and harder to just notice as one walks through the woods.

If the distance between the two communications points is not too great, you could use passive repeaters between the two points to reduce power demands (and cost). A passive repeater is one that uses no electronics to rebroadcast the signal at each point. It simple consists of two antennas, one facing your transmission antenna and the other antenna pointing at the input antenna of the passive repeater down range. The incoming antenna of the first repeater simply receives the transmitted signal and passes it to it's transmiting antenna through coax where it is naturally rebroadcast to the receiveing antenna of the other repeater. Such a passive repeater can be effective over a range of ten to thirty miles, depending on the transmitted power level.

With all due respect, Randy, you are missing Noah's point.
It isn't about the sort of emergency relay that you have
during and after "ordinary" emergencies- hurricanes,
earthquakes, etc. It is about groups of regular folks,
using the communications equipment they are most likely to
have (CB and/or FRS, not ham) to communicate with each other
and, perhaps, their immediate neighbors in extraordinary
circumstances. All your nice ham equipment and practice
wouldn't do a thing for them. Using depressions and low
power for signal masking, and high points for message relay,
just might.

The part about your ham usage being "legal and RIGHT,"
laudable as that is now, wouldn't be a consideration in such
circumstances.

Why don't you post what you're trying to acheive again so those in the ham radio newsgroups can get an idea of what you're wanting to do with this. There are some ham operators who eat this type of stuff (RDF, communications security, etc) up for breakfast. If they know what you're seeking, they'll be better able to address the issue and you might gain some valuable insights from their experience.

No need to add another thread. Just add "(RDF, ham radio, etc)" to the end of the subject line in your response (or just reply to this message - its already added). That is sure to get some attention in this ham radio newsgroup.

But I think Randy's point is that ham radio operators are more skilled at emergency communications during disasters, and are therefore more likely to be on the air following those "extraordinary circumstances." Of course, if your goal is to only communicate with your immediate neighbors, then perhaps CB is an answer. But if your goal to to ALSO communicate with emergency personnel (disaster assistance), those operations are more likely to be manned by ham radio operators.

And now that it is so easy to get a ham license (written test with no morse code), a well prepared survivalist would be foolish not to add ham radio to his communications capabilities (including the extra equipment needed to communicate with those immediate neighbors).

Many of you know that back in March of 1999, CSS purchased the rights to the Pc PakRatt for DOS and Windows source code. We made some enhancements to the Windows version, but since Timewave had discontinued the DOS Pakratt product, we didn't put any resources into upgrading it with the Y2K fixes.

Since that time, we've received requests to update the DOS version. Since the focus of CSS is Windows software and we know many of you still prefer DOS, we are offering the source code up for sale. We feel this is the right thing to do, since many of you continue to use the older computers for your TNC and logging programs.

We'd like the new owner or owner group to have experience in C and assembly, as this is what PakRatt for DOS is written in. It does compile with MASM 5.1 and Microsoft C++ 8.0 (the Visual C++ compiler).

Once you purchase the source, you can do anything you want with it, except call it PcPakratt or 'The former PcPakratt'. PakRatt is a Trademark of Timewave Technology and we cannot sell the name to you, just the source for the program.

Serious bids only and serious coders only.

No, I don't think you quite get it. I don't think Noah was
referring to unusually severe, but otherwise "normal"
disasters. >Big Clue directly ahead!< Otherwise, there
would be no need for signal masking, channel hopping,
communications security and codes.

Foolish? Perhaps. I know folks who have "run" the
potentials and come to the conclusion that going to the
trouble and expense of getting ham equipment, the license,
learning the subject, "staying current," etc., just isn't

worth the use of time and resources that could be used
otherwise.

Im sorry Noah, I have to really laugh at the thought of using CB's for anything productive. The massive dissaray that now exists on those frequencies would only be compounded 100 fold with the use of relay stations. Im sorry...BAD idea!!!

It may be atmospheric static. Then again, there may be some source of
noise around his residence -- a noisy power line transformer,
flourescent lights or whatever. A bettter radio won't necessarily
remove that noise source, if that's what it is, rather than simple
atmospheric static.

Yeah, you can get a Bird 43 for $276 from AES. Coils run $80-100. I
have a 20-year-old Bird myself, but if I were to sell it, I'd want
pretty much the new price because it looks new.

Transmit line of sight to repeater with SW out.

Skywave transmissions are not easy to trace.

Using multiple repeaters with varied repeat freqs are also not easy to trace.

In the situation I'm envisioning, the choices might be limited to a
bad idea and a worse idea. I'd prefer to have poor communications
with my neighbors via CB than no communications with them. If
something important is coming my way I prefer to know about it in
advance if possible.

Not completely, no. Communication security for a survivalist has
basically the same goals as in the military. Minimizing enemy
monitoring and maintaining friendly communication.

>
> And, of course, if you're seeking security for yourself, wouldn't a
>relay talking to you tip off those looking for you that you are located
>somewhere within the range of that relay point?

They might be able to figure that out, but that might not be very
helpful to them if they don't know the area that well.

A simple look at a map
>for where you might be hiding (where the relay point can hear you, but
>"they" can't) would almost certainly pinpoint your general location.

Only within a big circle. At the beginning of this discussion I
pointed out that I was mostly referring to a situation where both
sides were fairly equal in size and technology. Things would be
radically different if they were very different in size and technology
available. Of course, that was only in misc.survivalism.
>
> In other words, terrain masking is not a very effective means of
>obtaining security.

No, not when used alone, but it can help reduce the range of your
transmissions, along with directional antennae, low-power
transmission, and plenty of other things.

BTW, that was what I meant when I said using a relay station isn't so
much a security measure as it is a measure to help you communicate. I
was really trying to keep it tied in with the earlier threads on
communication security. Probably should have started another thread.

Again, you're not being very clear on what type of security you're trying to find (who, what, where, why), so I can only speak in general terms. The use of the phrase "terrain masking," and the mention of survivalism in the newsgroup list, suggests you're attempting to hide from people attempting to locate your position in a given area. So, I'll go from that direction in my response.

As far as the use of a repeater, the repeater itself would be very easy to locate since its signal is not highly directional. And, again, assuming you're in a remote location, it would not be that hard to guess your location based on the location of the repeater in the surrounding terrain. All one has to do is locate the general area of the repeater, and then look on a map for where your signal might not be heard from their position, yet the repeater can still receive your signal.

Of course, another option is to just locate the repeater itself and then use it to locate you. They can do so by simply following your signal from the repeater's location (if the repeater can hear your signal, then they can also hear your signal standing next to the repeater).

> Using multiple repeaters with varied repeat freqs
> are also not easy to trace.

A dedicated radio operator could locate almost any number of frequency pairs in a matter of moments. Its going to take a little more effort than that to offer any meaningful security.

I agree with Randy, Noah. CB, with its very limited channels, is simply not designed for repeater use. You seem to be forgetting that if you can key the repeater, so can anyone else who happens onto that channel. And given the limited number of channels, and the large number of CB users, there is a very good chance that many others in the area will want to use that channel also. And many of those people will not know that the repeater even exists, or that it is repeating everything they say on another channel.

Furthermore, anyone using the repeater for conversation will be using two of the very limited channels available, instead of the one channel that a normal conversation would use. This means that even less numbers can use the available channels at the same time, which will only cause more congestion on the band.

And it is for all these reasons, and still others, that the FCC does not allow the use of repeaters on the citizens band.

I wasn't talking about repeaters. I was referring to relay stations
manned by people. They wouldn't need to repeat every transmission
made, just the ones which weren't reaching the intended station.

You seem to be forgetting that if
>you can key the repeater, so can anyone else who happens onto that

That's where a person monitoring the radio comes in handy. I don't
know how many hams are in my area, even though I listen on the
repeater frequencies sometimes, and know they have a club and meet
once a month, but I do know there are lots of CB's around.

If we're in a survival situation congestion on the band probably won't
be a problem for too long, once people start running out of fuel.

That's one of the goals of communication security. Another is to keep
them from monitoring your communications and knowing what you are
doing. If they can only monitor one side of a conversation they only
get half the picture. Also, if you have codes and a plan for switching
channels they will have a very hard time monitoring all your
transmissions.

Here in the Ozarks that might not be so easy to do as in other places,
but it wouldn't be impossible. Anyway, I am aware of the difference
between a repeater and a manned relay station. I've served in a
military relay station, but never done anything as a repeater. ;)

> A dedicated radio operator could locate almost any number of frequency

Hopefully not too many dedicated radio operators would be trying to
locate me. ;)

The target group I had in mind with the security measures probably
wouldn't include too many people with RDF capability, and most of them
would probably be limited by their need for mobility, since they'd be
here looking for us.

Yup. I just spoke with Bob Heil (he and I go waayyyyy back, whether that's a good thing or not, I'll leave up to you.....)

It's a special model developed exclusively for the 706. Wiring and controls are tailored to that rig and that rig only. Also uses a special mic capsule with a freq response tailored to the 706's audio circuits. He didn't have a picture handy to email to me, but that's the scoop right from the source. That's why the picture doesn't look like the ones on Heil's website.

Message-ID: <Qa%H5.25566$YX4.936427@news2.giganews.com>
Source record: 70340

Hi,

Anyone know where to get a power connector for the TenTec Scout? TenTec doesn't list a commercial part number. They sell the connector and cable for about $5, but there is a minimum order of $25, plus shipping!!

73s Kline w7cnn@arrl.net

2464. FS: Kenwood DSP-100 and Timewave 599zx

I have For Sale:

Kenwood DSP-100, Digital Sound Processing Unit for the Kenwood TS-850S and other Kenwood's. It is in excellent condition and works great on receive and transmit. I have a copy of the manual, all of the cables and etc.

Price $275 plus Shipping and Insurance.

Timewave 599ZX is excellent condition. Works great and is in Excellent condition. I used the DSP-100 and Timewave 599zx in conjunction on my Kenwood 850S AT.

Price $275 plus Shipping and Insurance

OR $500 for the pair plus shipping and Insurance.

if interested please E-mail me direct K4FFA@home.com

Oh, great. I wondered what the little box at the end of the cable was all about.

Icom says they hope to get their shipment next week and start sending 'em out. We'll see when it arrives, then. Hope it's OK.

My Pro-micro is great - except on 17M where there is some sort of rf-"like" feedback in through the audio-output circuit (proven by using a separate set of 'phones while using the mic, when it goes away). No antenna issues - tuned to under 1.5:1). Also get crystal-clear audio reports from my contacts even when my monitor circuit is completely unintelligible. (using an Icom 775DSP, by the way).

Noah...that is where amateur radio has the moxy over CB radio. I doubt very many CBR's have the capability to operate under those conditions. A high number of amateur radio operators have taken training in emergency communications and dealing with problems that can occur during said situation. Traffic handlers, ARES, RACES are just to mention the basics. I'm sorry, but I would not like to depend on CB operators for emergency relay. We are licensed and have something to be proud of.....the knowledge I can do it legal and RIGHT. Amateur radio has many, many avenues and frequencies for communications during an emergency. There are far too many users of the CB's that will not honor a situation because they feel, I bought this radio...you can't tell me to shut up...etc. I'm an ex-CBer from a long time ago when you could get on and have a decent conversation with someone. My old call was KKM3379. When the foul language and all the carrier throwing started years ago, I got away from it. I do not miss the garbage. Have a great day!

Just curious here. Suppose my goal was to communicate with a family outside the range of say a 2 meter pushing five watts and I set up a repeater on a piece of terrain that would allow us both to reach it with no problem, BUT , I only placed my receiving antenna so it was line of sight to both of us and I placed say a pair cubical quad to transmit the repeater offset lower down on either side of the masking terrain. There would be line loss of course, but the gain from the Quad could make up for a lot and be very directional. We could each also use a quad at our ends, again masked if possible from sides or rear and we might be a bit hard for someone not pretty much between us and the repeater to find.

Would this work?

Steve,

Only if the new battery that you soldered in was really bad but checked OK momentarily with the voltmeter before installation. Rare, but it happened to me once with my 599. I'd also check for cut or pinched wires in the control head causing intermittent shorts / battery drain and other such problems.

Good luck es 73,

What the civilian world uses is called repeaters. You receive on one
frequency then rebroadcast on another. It can extend a handheld radio
to up to 40 miles (trunked radios can go statewide with links). Hams
have hilltop repeaters all over the US and Europe.

Yeah, I monitor one of the local ones on my scanner, but I was
thinking more of a relay station manned by people instead of an
automatic one. I figured since CB's would probably be much more
available locally, more people would be able to communicate with them
than ham radios.

2475. GE Super Radio vs. CCRadio--?????

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-20 01:58:45 UTC
From: catmandy99@aol.com
Message-ID: <20001019215845.22073.00000242@ng-fj1.aol.com>
Source record: 70315

Hi folks,
I hope this is on-topic for this group. I didn't know where else to turn.

My (74 year old) dad's favorite radio station is a strong AM about 60 miles away. He has a GE SuperRadio (the original, from the late 1970's or early 80's), which lives in one room. He loves it. Reception is terrific. Don't even know if he knows it's the "Super Radio". I didn't, until tonight. In his bedroom, he has switched at various times, to a clock radio and a few years ago, I got him a boom box with a clock-timer feature, so he wakes up to the radio, which he likes.

However, the stupid thing just doesn't get the reception on the station he likes so much. He listens through the static....but it drives him crazy.

I would love to get him a GOOD AM radio, so he doesn't have to listen through the static anymore.

I have done some research on the web, and I know that the CCRadio from the CCrane company, has the clock radio feature that I know my dad likes. But at $160, it's way more than I can afford. It's also got the weather band and the tv audio, which is entirely NOT necessary for his enjoyment. He'll never use them. Even FM band is a waste on him!

I know the GE Super Radio will do the job he wants, but minus the clock. I don't know where to buy it though. I am also aware of the Radio Shack Optimus Extended range radio. I know I can get it for $40 on sale (I'm waiting for the sale!!!!), which is more in my price range. It's also easy for me to get to Radio Shack. I'm sure the Optimus radio will also satisfy his needs...the station came in at the store, which is about 7 miles farther from the transmitter than his house is.

My question is this: For $40, the Optimus will do the job, and I can throw in a $10 (or even a $20!) timer from Home Depot and make it turn on at the appointed time, just the way he wants it to.

BUT!!! Is there anything on the market, for under about $60-70, that has the reception of the Optimus, or the Super Radio, PLUS a clock/timer feature? (Again, I know the CCRadio has the clock, but it costs about $100 more than i can afford).

Any help would be greatly appreciated!
Thanks so much.
Sheryl

I HAD a CCRadio, and I still HAVE a GE Superadio III.

IMHO, the CC Radio was more hype then anything else. Reception is far
superior on the Superadio III, for alot less money.

I believe GROVE has the GE Superadio III, among others.

What are you seeking security for, Noah? While I can see how using terrain masking could offer some control over where your radio transmissions might travel (aiding radio security to some extent), wouldn't a relay on high terrain completely defeat that effort?

And, of course, if you're seeking security for yourself, wouldn't a relay talking to you tip off those looking for you that you are located somewhere within the range of that relay point? A simple look at a map for where you might be hiding (where the relay point can hear you, but "they" can't) would almost certainly pinpoint your general location.

In other words, terrain masking is not a very effective means of obtaining security.

:(snip)
:
:>Most outlaw CB operators use ham equipment like the Yaesu FT-101
:>and the Heathkit SB-200 family. There is a huge amount of ham gear
:>out there. You need to go to a hamfest.
:
:The problem is I'd have to bring all my neighbors, too, or just buy
:enough radios to outfit all of them. Another side benefit for CB's is
:that they're getting pretty cheap nowadays. I just picked up another
:handheld 40 channel CB on eBay for $5.50 plus shipping.
:
:I may get a ham radio(and license) one of these days, but it could be
:quite a while. For now I have CB's and FRS for transmitting locally,
:and receivers and scanners for monitoring more distant transmissions.

You must have an outlaw CB group in the area. They work outside
the regular CB band. They either use modified CBs or modified
ham gear. This is the biggest element of CB, not the shit sold
to the public.

Why use limited equipment? And ham gear is very cheap at
hamfests.

:Maybe in the high-speed, low-drag units, but I was stationed in
:Germany near the Czech border, in a Cav unit. We didn't have all the
:newest technology to patrol the border, so we had to make do with what
:we had. We had bodies and Hummers with radios, so we sent them out.
:The Cav patrolled that border for around 45 years or so, so they had
:figured out the best locations for relay purposes. What amazed me was
:the difference in radio quality. Our unit didn't devote much time to
:maintenance of the radios, like regular servicing and stuff. We were
:visited out there once by another unit, and their vehicles joined ours
:on a patrol of the border. Their radios were much clearer and able to
:communicate with the Ops center much further away. When they got back
:I asked what they did to make the difference, and they said it was
:probably the service program they had for their commo gear.

If a radio is not serviced regularly, it goes out of tune. That
means a lost of power.

:>The UAV (unmanned aircraft) are also being used to repeat
:>transmissions in places like Bosnia.
:>
:>Use Class A CB (GMRS) in the 460 Mhz band. The first 7 channels
:>of FRS are GMRS. Put a repeater up on a hill with solar power.
:
:Here in the Ozarks there are lots of people living on the high
:terrain, so manning wouldn't be that big a problem.

Which means that they are targets for incoming artillery.
Get an automatic repeater, use solar power. Then you
can check it remotely. Just stash it somewhere on their
property.

Remember, 10/11m is not to different from the military 30
to 88 Mhz band. And there are repeaters for 10 m.

Br. Roulle
I have to agree about the GREAT debate....yes I'm a ham and have little use for CB as it is today. It is not because of the loss, but abuse. Being in a region like you are, it is an asset and used very well. In earlier posts, I referred to the maniacal garbage that has erupted over the years. I commend you and others in your region for putting a communications medium that is vastly abused to the proper use. Keep up the great work and my hat is off to you.

I agree Randy. The 11 meter poke was gentle joshing. I have much admiration for Hams and the dedication they have. If I didn't hate learning code so bad, I'd have my ticket. Somehow the voice only tickets seem to be cheating to me.

In an earlier incarnation, I had bought a semi-truck and hauled meat and produce to Eastern markets. Even at that time CB channels had become a horror show anywhere near a city. But then there times where there would be hundreds of trucks waiting for the DOT to clear the roads at Snow Shoe PA or LovelandPass/EisenhowerTunnel and the only communication I had was channel 19. I ran legal/barefoot in my rig as did most drivers.

There were a few fools on the road with 2kw rigs, but fortunately they were parked at the truck stop. Thank God they didn't last over a couple of years on the road.

There are a lot of "Gods little underachievers" on CB, but with a little practice and judicious planning, you can successfully run a net on CB, even in the city. I am at the age now where I leave the homestead to the kids and winter in the city, where I am near my HMO and HBO :)

I belong to the Colorado 57th Geriatric Militia, (underground) and we are spread out in distance and girth. We normally use GMRS for longer range work up to 30 miles and CB SSB for the same ranges late at night and as a backup. A couple of the wives have their Novice tickets and love QRP operation on the HF bands. I just noticed my old CB License taped to the side of an old 23 channel unit that I have. KBBE-1613

We also have a passel of FRS units that we use in lieu of CB's when we are convoying up to the mountains tho most of us are equipped with CB too. We use the FRS's in maneuvers too, mostly for storming the hot-dog redoubts and out flanking the potato salad.

And these days, even on the farm, cell phones are taking more and more of the load. :-(

2492. F.S. - VERY HEAVY DUTY 4-Element 10 Meter Beam

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-21 00:00:00 UTC
From: "Jay C. Greenberg" <wa4vrv@srv.net>

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Oh, come on, Roulle. We're not that petty, or that simplistic. In fact, many of us started out our radio hobby using CB radio. For example, I got my first CB license way back in 1976 (KBEO-0299) and I'm in the process right now of installing CB radio equipment in both of my vehicles for a pending trip (in addition to the existing ham radio equipment in those vehicles).

The difference is that ham operators like myself have used both types of radio equipment and are therefore more aware of the capabilities and limitations of both. And it is on that basis alone that we recommend one type of equipment over the other for a given situation.

> We should plan for emergencies where
> the government isn't the enemy as well
> as the other scenarios. And in these
> scenarios, CB plays a useful role,

And thats fine, Roulle. But Noah's conversation seemed to center on the use of repeaters, and other techniques, in a quest for higher communications security between a specific point and another specific point. Obviously, since his neighbors in general would not have these capabilities with their basic CB radio equipment, this conversation is not about simple conversations with neighbors in general using basic CB radio equipment.

And, as we (Randy and I) pointed out to Noah, the CB radio service was simply not designed to do what he is seeking, and the ham radio service is. So, unless you're aware of something that we're not, our statements to Noah were both factual and honest (and not just sour grapes over the loss of the 11 meter band).

And I would urge those people to check out ham radio today. For the average CB'er, the (no morse code) Technician license exam should be fairly easy since the average CB'er probably already knows more than half the stuff on the exam anyway (antennas, coax, etc).

And equipment costs have come down quite a bit in the last few years. Today, there are several 2m mobile radios prices under $150, and several more priced slightly higher than that (less than $200). And, just like a mobile CB radio, these radios can used in the home as a base station with the addition of a relatively inexpesive power supply.

The only difference is that the basic 2m radio will offer so much more than the typical CB radio - more frequencies, more power output, less noise, less crowding, greater range, more reliable communications, the use of repeaters to increase range even further, and so on.

There are also several handheld 2m radios that cost less than $150 (Yaesu VX-1R, Icom IC-T2H, and others). Small, pocket-sized, units such as this offer fairly reliable (better than a cell phone) communications over a range of twenty to fifty miles through the use of repeaters.

Ham radio has a lot to offer, Robert. And, don't forget that you can still keep your CB (with all it has to offer) also. So, in the end, you get the best of both.

I think you need to be a little more clear on this, Gregory. You're not suggesting that CB'ers use the 10 meter ham repeaters for this, are you? There are huge fines associated with such activities and, as you should know, the FCC can be very strict when it comes to enforcement of the ham bands.

I know ... but I can't resist tweaking hams from time to time! hi hi

Perhaps I read it wrong, but it seemed to me that what Noah was addressing was a net where the net control would pass on messages from a more distant station rather than a repeater operation. In parts of the west and perhaps rural areas of the East, legal CB could run on SSB and a cheaply made vertical polarized half rhombic and get some pretty fair ranges.

I think that his further point was is that CB's are plentiful and could be pressed into service in an emergency. I agree that CB's aren't the best of all possible worlds, and in my own city where I winter, my group solved the problem of communication with GMRS units and directional antennas. Our city net is spread over a footprint of 30 miles by 50 miles in mostly a urban setting, but we still run the CB's on SSB once or twice a year to see if they are still operational. They are a major PITA with all the tuning and channel changes, but they can be made to work reasonably reliably. We did that so that if we *had* to, we would have the capability of interacting with inexpensively equipped mobiles who are not now a part of our group but might be in an emergency.

Ham units certainly will be better and in some scenarios, specially if the government is the enemy, can be set up a little more securely, cover wider ranges and can use packet messaging right off the shelf. And if the group is dedicated, getting most of them licensed wouldn't be a major obstacle unless some members wanted to stay off the information grid. A major obstacle is that amateur licenses *are* in the public domain.

I think that a discussion on it'lldo communications doesn't hurt.

Why the frownie? I know a grain harvester operator with 2
machines and the complete setup- service truck, etc. He
looked at business radio for comms, but then decided, given
the costs, reliability, wider usefulness, to go with cell
phones for his drivers. Makes perfect sense to me. Of

course, he wasn't looking for a hobby- just the best way to
communicate.

I'll go $15, you pay shipping!

The right thing to do would be what HiTech did with the CP/M
stuff. Pitch it out to the public domain. It's already depreciated
fully.

I will make it $20 if you throw in the C compiler and the Masm compiler, I junked my dos compilers years ago.

Seriously though, why not do the right thing and put the source code in the public domain, dos is dead, even the source code is pretty useless, nobody drives com ports that way anymore...

2503. EZNEC: Copyright Violation

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-21 00:00:00 UTC
From: fractenna@aol.com
Message-ID: <20001021084351.21694.00000831@ng-cd1.aol.com>
Source record: 70278

NOTICE:

Roy Lewallen, W7EL, d/b/a/ 'EZNEC' is in copyright violation for unauthorized distribution and publication of the antenna file marked 'MI2'. Lewallen has publicly made and advertised this file on his http://www.eznec,com web site. Furthermore he has publicly advertised its availability on USENET.

This MI2 file was first produced by me in 1994, with a revision in 1995. It's copyright was assigned to Fractal Antenna Systems, Inc. in 1995. The MI2 file posted by Lewallen is either an exact or "substantially recognizable" derivative of my copyright file. Lewallen has neither sought nor received permission to use this file in any way.

Mr. Lewallen's commercial publication and distribution of the MI2 file does not constitute "fair use" and he has been so advised.

On 20 October, 2000, the copyright for MI2 was transferred back to me, the author. I am the sole holder of said copyright and have not authorized any copies to be published or distributed by Mr. Lewallen. The file is not in the public domain.

I urge fellow amateurs to actively discourage Mr. Lewallen from unuathorized use of copyrighted material. To do so undermines the edifice of creativity which much of the software used by hams is built upon. Not only is it stealing, but it is an insult to those who try best to educate and help others.

Mr. Lewallen has been sent a certified letter formally asking him to cease and desist. If he does not remove the material he will be sued d/b/a EZNEC.

Please let Lewallen know how you feel about stealing someone else's property. His e-mail is:

w7el@eznec.com

Thank you!

Nathan Cohen, Ph.D. N1IR

2504. FS IC-765 orig owner, excellent condx

IC-765 for sale in excellent condition electrically and cosmetically. I am a non-smoker and the original owner of the radio. In addition to the many standard features such as built in power supply, auto antenna tuner and a pair of 500 cy filters, this radio has both optional 250 cycle filters and a voice synthesizer. The rig has the PBT mod, performed by Adam AB4OJ, net controller on the Icom net. In addition to the original owner's manual, you'll receive the service manual, which I never used. I have the original cartons and styrofoam to insure safe shipping. $1200.

That's not painting with a broad brush. That's human nature.

Try this with your class: Take a plain white piece of 8 1/2" by 11" paper. Put a small, solid, black dot on it, about the size of a dime. Show it to your class and ask them what they notice about about it. The vast majority will notice the black dot. Very few will notice that the paper is mostly white, or that it is rectangularly shaped, or that the other side of the paper is still white. (unless you used a pen that bled through)

That is some people look at ham radio. It's human nature, and that is very difficult to change.

:> Again, you're not being very clear on what type of security you're
:>trying to find (who, what, where, why), so I can only speak in general
:>terms. The use of the phrase "terrain masking," and the mention of
:>survivalism in the newsgroup list, suggests you're attempting to hide
:>from people attempting to locate your position in a given area. So,
:>I'll go from that direction in my response.
:
:That's one of the goals of communication security. Another is to keep
:them from monitoring your communications and knowing what you are
:doing. If they can only monitor one side of a conversation they only
:get half the picture. Also, if you have codes and a plan for switching
:channels they will have a very hard time monitoring all your
:transmissions.

Most modern repeaters can be controlled remotely. Control commands
are send via a touch tone pad (audio) on the input frequency. It
would be possible to even change frequencies.

:>
:> As far as the use of a repeater, the repeater itself would be very
:>easy to locate since its signal is not highly directional. And, again,
:>assuming you're in a remote location, it would not be that hard to guess
:>your location based on the location of the repeater in the surrounding
:>terrain. All one has to do is locate the general area of the repeater,
:>and then look on a map for where your signal might not be heard from
:>their position, yet the repeater can still receive your signal.
:
:Here in the Ozarks that might not be so easy to do as in other places,
:but it wouldn't be impossible. Anyway, I am aware of the difference
:between a repeater and a manned relay station. I've served in a
:military relay station, but never done anything as a repeater. ;)

Modern repeaters eliminate the need of a control operator on site.
That is why the Army is using UAVs with repeaters on board. All
controls can be done remotely.

:
:> A dedicated radio operator could locate almost any number of frequency
:>pairs in a matter of moments. Its going to take a little more effort
:>than that to offer any meaningful security.
:
:Hopefully not too many dedicated radio operators would be trying to

:locate me. ;)
:
:The target group I had in mind with the security measures probably
:wouldn't include too many people with RDF capability, and most of them
:would probably be limited by their need for mobility, since they'd be
:here looking for us.

That is why the Army uses aircraft for RDFing.

:> As far as the use of a repeater, the repeater itself would be very
:> easy to locate since its signal is not highly directional.
:
:Just curious here. Suppose my goal was to communicate with a family outside the
:range of say a 2 meter pushing five watts and I set up a repeater on a piece of
:terrain that would allow us both to reach it with no problem, BUT , I only
:placed my receiving antenna so it was line of sight to both of us and I placed
:say a pair cubical quad to transmit the repeater offset lower down on either
:side of the masking terrain. There would be line loss of course, but the gain
:from the Quad could make up for a lot and be very directional. We could each
:also use a quad at our ends, again masked if possible from sides or rear and
:we might be a bit hard for someone not pretty much between us and the repeater
:to find.
:
:Would this work?

Hams have repeaters in the 10m band. Either ham equipment or CBs can
be converted. Remember there is a lot of expanded 10m and CB units
out there.

:> Why don't you post what you're trying to acheive again so those in the
:>ham radio newsgroups can get an idea of what you're wanting to do with
:>this. There are some ham operators who eat this type of stuff (RDF,
:>communications security, etc) up for breakfast. If they know what
:>you're seeking, they'll be better able to address the issue and you
:>might gain some valuable insights from their experience.
:
:I was posting about the measures which many people might take to make
:their communications more secure in a survivalist scenario. The
:specific scenario I was aiming at was one in which both sides were
:somewhat equal, rather than a situation with one side having a huge
:technological and manpower advantage. The situation most often brought
:up in misc.survivalism involves something like a small farming
:community or small town being watched by some "predators" from outside
:their area. I know it's possible for the "predators" to have some RDF
:capability, I wouldn't consider that a major problem if good comsec
:procedures are followed.
:
:I posted some of the measures we used in the Army for communication
:security and some possible ways they could be used in the civilian
:world. Things like directional antennae, low-power transmissions,
:pre-planned frequency(channel) changes, terrain masking, and a few
:other things straight from the Army's manuals(and my training).
:
:The reason I stuck with CB's is because they seem to be much more
:common than ham radios. I know there are some hams in my area, but I
:don't think there are enough for everybody to be able to communicate
:that way with each other in that situation.
:
:I've checked out the local hams sometimes and think they could be very
:handy to have around, but it just doesn't look likely that everybody
:would be able to communicate locally that way. I've thought about
:getting a license some day, but I already have more hobbies than I can
:handle, so that's just another one on the list for the future. Between
:a full time job and 45 acres of land, I seem to have enough to keep me
:busy most of the time.

Most outlaw CB operators use ham equipment like the Yaesu FT-101
and the Heathkit SB-200 family. There is a huge amount of ham gear
out there. You need to go to a hamfest.

:(snip)
:
:>What the civilian world uses is called repeaters. You receive on one
:>frequency then rebroadcast on another. It can extend a handheld radio
:>to up to 40 miles (trunked radios can go statewide with links). Hams
:>have hilltop repeaters all over the US and Europe.
:
:Yeah, I monitor one of the local ones on my scanner, but I was
:thinking more of a relay station manned by people instead of an
:automatic one. I figured since CB's would probably be much more
:available locally, more people would be able to communicate with them
:than ham radios.

Even the Army is going away from manned rebroadcast. When we
do, it is two SINCGARS hooked together like a repeater (automatic).
Frequency hopping and all.

The UAV (unmanned aircraft) are also being used to repeat
transmissions in places like Bosnia.

Use Class A CB (GMRS) in the 460 Mhz band. The first 7 channels
of FRS are GMRS. Put a repeater up on a hill with solar power.

The problem is I'd have to bring all my neighbors, too, or just buy enough radios to outfit all of them. Another side benefit for CB's is that they're getting pretty cheap nowadays. I just picked up another handheld 40 channel CB on eBay for $5.50 plus shipping.

I may get a ham radio(and license) one of these days, but it could be quite a while. For now I have CB's and FRS for transmitting locally, and receivers and scanners for monitoring more distant transmissions.

:
:
:Dwight Stewart (W5NET)
:
:http://www.qsl.net/w5net

There is another way. We do have 10 metre repeaters. On FM. Face
it, hams use CB equipment on 10m and CBers use ham equipment for
outlaw activities. It would be posible to use 10m repeaters for
automatic repeat (with solar power). Since 10m is an HF band, it
would not be as easy to locate as an UHF repeater.
```

BTW, the miliary uses 30 to 88 Mhz which has many properties
like HF.

Maybe in the high-speed, low-drag units, but I was stationed in Germany near the Czech border, in a Cav unit. We didn't have all the newest technology to patrol the border, so we had to make do with what we had. We had bodies and Hummers with radios, so we sent them out. The Cav patrolled that border for around 45 years or so, so they had figured out the best locations for relay purposes. What amazed me was the difference in radio quality. Our unit didn't devote much time to maintenance of the radios, like regular servicing and stuff. We were visited out there once by another unit, and their vehicles joined ours on a patrol of the border. Their radios were much clearer and able to communicate with the Ops center much further away. When they got back I asked what they did to make the difference, and they said it was probably the service program they had for their commo gear.

Here in the Ozarks there are lots of people living on the high terrain, so manning wouldn't be that big a problem.

Gentlemen,
My HP 608F VHF signal generator after sitting for about a year has developed pretty severe drift at the top end of it's range. I use it for maintaining my UHF repeater but it drifts off freq so fast it has become a PITA (Pain in the ..)

Anyone have any idea what may be going on here. My only tube experience is with Amplifiers. Every oscillator I ever built was Xtal ref PLL.

I get amused at the CB vs. Ham debate. Some hams still haven't gotten over the loss of the 11 meter band.

I spend much of my time at the family farm in a high valley in the Rockies. There have been times when a blizzard or severe cold settled in there, and the CB's provided the backbone of communications for people who had to have feed cattle, direct emergency vehicles into the community, or just plain be neighborly. The major town is about 20 miles away, and on some days of high sunspot activity, the only way to get a message to the feed co-op was by having that message relayed by a neighbor closer to town. We routinely relay messages from town to farms that are further out.

Ham radio may have worked better in these emergencies if there were hams available. As a matter of fact, every year the towns around here conduct a Civil Defense exercise, and hams do play a large part of the exercise. But there still is a need for CB's, especially in the rural areas. A ham can get a message to a anxious family member ten states away, but getting the message to the ham requires far less sophisticated equipment. CB fills that gap nicely.

We should plan for emergencies where the government isn't the enemy as well as the other scenarios. And in these scenarios, CB plays a useful role, specially for people who don't want to invest the time and energy into getting licensed. Most of the farm women here have no interest in ham radio, but will fire up the CB in the mornings and catch up on the latest information from the neighbors.

The last blizzard, I sat by the CB, ready to fire up the snowmobile and run to the aid of my neighbors house where his wife was pregnant and snowed in alone. I could have either taken her to the highway where the ambulance would have been waiting, called for assistance from other families or brought her to our home. As it turned out, she didn't go into labor until the county cleared the road, but still, help would have been there had she needed it.

While I tend to agree with you about hams vs cbers, I must point out that the nonesense down in the 80mtr band does not make us hams look all that better then your common, garden varity CBer. These guys are extras+, either passed or bought their ham licenses back before no-code was a gleam in the candy companies eye. And they make the filthy mouthed bums that hang out on ch14 [here in central Ky] look like decent people. So can we say, some hams could be very usefull to an emergency operation. Others might be better used for live fire drills.
I have been a ham for over 30 years and remember when Class D CB was carved from the then 11Mtr ham band. Where SSTV was developed. I was not a ham at that time, but a friend of my father was and I was interested. I still have the old Hallicrafters SW that my parents scraped up the cash for.
I even heard some of Capethorne[I may well have his first name wrong] Mcdonalds AM SSTV. God I wish that I had a recorder back then!

Why not seperate your receiver and transmitter and run audio/control/power
lines instead of coax. No coax loss. Build the receiver using something like a
Pro34, which in the monitor mode sleeps and only listens 1 a secon or so
cutting pwoer requirements by a large factor. Build a cmos controller,
dispense with the extras (CW ider time out etc). Using a Pro34 (or one of the
scanning ham HTs) as the receiver, with another HT as the TX, builing your own
controler, with a good deep cycle marine battery with a decent solar array and
you have a repeater for less than say 200. IT should be poisble to reduce this
by carefull scrounging.
What we used for backup "Secure" comms was a couple of old GLB PK1 TNC.
They used a Z80 running with a 3.58 crystal. Replace teh Z80s with Z80As, and
the crystal with a 4.0MHz Than ran 1200B*(4.00/3.58) AX25. We riiged a switch

to where it would works standard, or flip the switch and instant "secure".
We only tested it once[in the "Secure" mode] over a 25+ mile simplex path and it worked great. 25Wat mobile at my work end (inot a 1.4wave) and a 5 element yagi at the home end.
We also used it several time in the standard mode, late at night through one of the local voice repeaters. I even cobbed up a homebrew version and used the car as a digipeater with a IC-2at/Tandy TRS80/100 and the TNC for a truly portable setup. I never tested the whole system end to end in the speeded up mode, but it should have worked. And do not forget about running your tnc at a lower say 600B on VHF circuit. Fairly secure, and perfectly legal.
As long as you used two, or more, identical TNC ans do not speed (or slow) the clock too much it should work.
Yea Iknow it is not exactly legla. And there is the real risk of a smart lcoal ham have a baycom and the skill to tweak it to intercept. But this is much more secure than any voice comms. Shucks CW is getting pretty secure these day!

2525. Make a 10.5 dBd gain UHF Yagi

I was posting about the measures which many people might take to make
their communications more secure in a survivalist scenario. The
specific scenario I was aiming at was one in which both sides were
somewhat equal, rather than a situation with one side having a huge
technological and manpower advantage. The situation most often brought
up in misc.survivalism involves something like a small farming
community or small town being watched by some "predators" from outside
their area. I know it's possible for the "predators" to have some RDF
capability, I wouldn't consider that a major problem if good comsec
procedures are followed.

I posted some of the measures we used in the Army for communication
security and some possible ways they could be used in the civilian
world. Things like directional antennae, low-power transmissions,
pre-planned frequency(channel) changes, terrain masking, and a few
other things straight from the Army's manuals(and my training).

The reason I stuck with CB's is because they seem to be much more
common than ham radios. I know there are some hams in my area, but I
don't think there are enough for everybody to be able to communicate
that way with each other in that situation.

I've checked out the local hams sometimes and think they could be very
handy to have around, but it just doesn't look likely that everybody
would be able to communicate locally that way. I've thought about
getting a license some day, but I already have more hobbies than I can
handle, so that's just another one on the list for the future. Between
a full time job and 45 acres of land, I seem to have enough to keep me
busy most of the time.

Well, I am taking the plunge, folks. Working closely with my partner-in-crime (an ex-Neumann technician and distributor) we have a Chinese 797 mic or two that look really far superior and sound way better than most others.

We are going to offer them on a 100% money back warranty *

Are they Neumanns? No !

Are they VERY good ? Yes ?

Does this mean I am no longer selling Neumann? No way, Jose ! Lotsa U87ai, TLM103 and KM184 sitting here, although I can barely keep them in stock.
Call for the best prices in North America. Sorry, no email quotes on Neumann just now.

The First options:

Nady (I warned you !!) SCM1000 Multi-Pattern with 3 patterns, pad and rolloff, similar appearance externally to BPM type, MUCH better specs and sound: Price will go higher, but the intro deal is going to be $399 each!

I am sending an evaualion unit to Harvey as soon as they get in.

While we wait for the smaller ones, my mate pulled apart his stock of the ADK A51S and discovered the FET was the issue, not the capsule!
We have a limited number of Black ADK A51s, complete with shockmount and flight case: $295 with select low-noise FETs retrofitted

If you want one in the sexier silver finish, they are $350, also with shockmount and flight case and FET update.

We are working on a FET update kit...

A limited number of the BPM mics remain:

CR95, multipattern, U87 size, 3 patterns, rolloff and pad, transformerless output, etc: $855
(these were $995)

Give me a call or email!

db

* assuming they are returned intact, complete, with all cards and boxes within 14 days !! Shipping not included

Rob et all:

There is no desperation here at all. CSS is a no-debt software company and has been in business 12 years. If we don't sell it, we stay in business as we are doing now. It's just the DOS version doesn't get any work done on it.

What I am trying to do is allow some ham or group of hams an opportunity to support the DOS product and possible make some extra money for THEM since WE are focused on Windows.

We had discussed putting it into the public domain or with a GNU license but decided that the resources on supporting it would take away from our Windows products.

Fact: There are 80,000 Pk-232 that were sold by AEA
Fact: Each one of them had PcPakratt lite included.
Fact: Each version of PcPakRatt lite and PcPakRatt II has Y2K issues

So if just 1% of the hams who own PK-232s bought a $25 upgrade of PakRatt DOS, that's 800 units of sales for revenue of $20,000. If 2% bought the upgrade from a ham, that's $40,000 of revenue. From the information I have, I believe about 10%-20% of hams that have computers still run under DOS and are happy with that.

I'm looking for around $5,000+ for the source code.. I believe AEA invested about $100,000 in the development process. This does include the source for PakRatt Lite, PakRatt II for DOS and the PK-270 commercial version of the DOS software.

And there is market potential for 1 or 2 future upgrades for the DOS version, but we want to focus on Windows, not DOS.

There is one problem with these best case "off the cuff" figures.

AX.25 packet is dead. It is dying so fast, no one knows what
to do, product wise. Here locally there is one node, one frequency
remaining, and I can't find anything on HF packet except BBS
diehards.

Visual Basic and Java, are the two programming languages of
the PC that are doing well. C is fading fast, and Object Oriented
languages are the programming style of choice today. C++ had a
beginning surge, but Java has pushed it from the scene.

The big mode today is the PSK31 and modes that use the soundcard
on HF. This is even becoming popular on VHF with all-mode rigs.

So the whole concept of AX.25 is a bad investment strategy for all
older DOS C software, in my opinion.

But let's take the figures...

You may very well make 20k the first year, and all will be well,
but you also have to factor in the post-purchase costs. Say you set up
an online web page to sell the software as downloaded credit card
purchases. You don't want to have to ship this stuff (floppy and manual
costs). Figure ISDN speed as a minimum, and that will run you about
$300 a month. Then the credit card online store gets 10% of sales, now
we're down to $18k. Given the internet connection for one year ($3600)
that leaves you with $10 k, or about $5 an hour income for the year.
Then there's taxes, figure 33% or $6600, and now you're left with $3400
or about $1.63 an hour. So you are going to need two years to show
a profit. If there is only one node on one frequency today, how many will
there be a year from now.

And no, you can't legally use your cable-modem for distribution.

I think there may be a case for liquidating the software. Just put a GNU
sticker on it, and upload it to a Linux distribution site. Zero cost, and
you
are done with it. You can even claim a tax credit.

Dean.

The source code supports the multimode protocols in the PK-232, not just the AX25 packet side.

So it does CW, RTTY, ASCII, FEC, Pactor, etc... anything that the TNC supports..

And someone could add PSK-31 DOS support it it, by using soundcard code and using the TNC or TNCs serial port for the keying circut, like we're doing with the next release of Pacterm and PkTerm. It would also be good for a dos based contest or logging program that wants to add host mode TNC support to it for the PK-232.

2547. Multi-Band Mini Quad Antenna - Comments

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-22 00:00:00 UTC
From: antenna <antenna@attcanada.net>
Message-ID: <VeKI5.76424$YG5.53357@tor-nn1.netcom.ca>
Source record: 70159
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

We are currently doing our field testing on a new antenna design that you may be interested in. This antenna is a multi-band (10m, 15m, 20m) mini-quad (smaller than a full size quad) and portable (easily folded).

This antenna is designed for:

1. High performance
2. Ease of installation (and disassembly, if required). No wires to string.
3. Small turning radius (7ft).

Our field tests to date indicates that the antenna is performing as designed on all bands.

Any comments are welcome either by the newsgroups or email as we are trying to determine the interest level in this product.

If you wish to be kept update with the latest information, please drop use an email at: antenna@attcanada.net

Thank you for your interest.

I have a Heil head set with the Icom 10db gizmo. What a hassle to use mobile as it makes a big ball of wires and you can't use the gizmo with vox. It sounds pretty good I am told however, so I wonder what the differnce is between the #4 and #5 elements and the one you are refering too actually are, if any. I also wonder if it will work with vox and if it eliminates that $50.00 booster gizmo thing, which in my opinion seems to be way overpriced for what it does.

2549. Kenwood TM-741/742 differences? Any good?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-22 00:00:00 UTC
From: aj.bolton@virgin.net
Message-ID: <39f37cc3.52065786@news.virgin.net>

Cross-posted to: alt.ham-radio.vhf-uhf;,rec.radio.amateur.equipment

Hi,

I'm considering buying a Kenwood TM-741E and I wonder what the difference is between the 741 and the 742? The 742 looks very similar to the 741 although the display is rather different and there are less buttons on the front panel. I'd guess that the 741 is older.

Also, is the 741 any good? The one I am considering has 2m, 70cms, 23 cms and 10m band modules so I'd be really grateful to know if it is a reliable set and if it performs well. Are there any known problems? Fixes? Worthwhile mods?

Is it possible to configure the set to have, say, 10m and 23cms or must the 2m module be fitted all the time?

Thanks in advance,
Al Bolton

Needed before the contest:
Mod instructions related to Icom IC-740. There were 3 mods in some service manual addendums: voltage on mic jack, impedance, and sensitivity.
Needed is the mod for sensitivity of the mic audio line. I think it involved clipping one or two resistors in the mic amp circuit. Wanting to use a headset with the Icom 740 without buying that expensisve Heil preamp.

Please email W4UDX@juno.com
and / or wr4f1@juno.com

Also - that program could support the PK-900 with a little tinkering.....and
additions here and there....
ACARS is also supported by the PK-900, and that should be considered in the
next version of whatever software can be redone......

Hi Al -

The 741 is quite a good radio. I use one in my base station for VHF/UHF, and before that, several years in our motorhome. Mine has the 450 and 6-meter modules. As I recall, the 2-meter portion is fixed. The only problem I have had with mine was recently when I blew the 2-meter final amplifiers. Cost about $80 for a new module, and about 30 minutes to install. I have really enjoyed my 741A for a long time.

Since I have been a General Class for around 20 years, what am I going to need to take to move to Advanced?

To go to Extra, is it just the question exam?

Yes, you will have to take the written exam. You will only have to pass the code exam one time. If you have not passed the code you will also need to pass the 5 wpm test.

The upgrade from Tech to general was for only those that hold a Tech class from sometime before the mid 1980's . The test for the Tech class at that time included the same type of questions for the low bands and VHF bands like what is now the General and Tech tests plus the code at 5 wpm. All that is required of them is to show up and fill out the correct forms and pay for the paperwork.

:(snip)
:
:>If a radio is not serviced regularly, it goes out of tune. That
:>means a lost of power.
:
:Yeah, I spent lots of time with these guys discussing our commo gear
:and that was about the only difference I could find. The difference
:between our communications was huge.

That is why you need to be trained.

:(snip)
:
:>Which means that they are targets for incoming artillery.
:>Get an automatic repeater, use solar power. Then you
:>can check it remotely. Just stash it somewhere on their
:>property.
:
:In a combat scenario incoming artillery would be a big concern of
:mine, but in the survivalist situation I have in mind, I doubt there
:would be that much of a problem with artillery.

And you do not think that "an end of the world, as we know it"
situation would mean that there would be those hunting you
with whatever weapons it takes?

Sort of the God will punish everyone, including all christians,
when the Anti Christ comes as many Baptist believe.

:>Remember, 10/11m is not to different from the military 30
:>to 88 Mhz band. And there are repeaters for 10 m.
:
:Yep, but there's still the problem of availability of radios. Even
:right now when things are normal CB's probably outnumber ham radios by
:quite a big margin around here. Since I'd want to be able to
:communicate with as man people locally as possible, that's an
:important factor.

Those who have ham gear can communicate with the widest
range of individuals. It is you who needs the equipment.

2572. Re: More Communications Security (RDF, ham radio, etc)

:(snip)
:
:>You must have an outlaw CB group in the area. They work outside
:>the regular CB band. They either use modified CBs or modified
:>ham gear. This is the biggest element of CB, not the shit sold
:>to the public.
:
:There may be such a group in my area, but I haven't listened to the CB
:enough to know.

The outlaw CB community is very large, larger than the ham
community.

:>Why use limited equipment? And ham gear is very cheap at
:>hamfests.
:
:For me, the main factor isn't the price of the gear. It's the fact
:that a lot more people probably have CB's available in the area than
:ham radios.

What about for yourself? In an "end of the world, as we know it"
situation would you not want to have equipment that can communicate
with everyone? Ham gear can do that.

With ham gear, you can talk to the CBers as well as hams and
commercial stations.

It isnt diff. to use.. come on guys.. Here is what u need to do.. You have to have a wattmeter inline first off. Turn the unit on and let it warm up some 5 minutes say. Now put the band selector on the band u wish to talk on and turn the vfo to where u want to be. now switch to tune. and watch your meter.. DONT DO IT FULL OUT make sure the MIC knob is all the way to the left. THis will control your output. Watching your meter twist the mic till u see a slight 20 watts or so. Turn your preselctor to a peak reading then turn your final to peak reading. IT might go high so what u should do is turn down the MIC some if it shoots up high.. thats about it tune it all for peak reading. You should get 100W + out of the rig. Put it back in the mode u wish to use then slide the mic all the way to the right and wammo your hamming.. hope this helps

Thanks Tom,
You're an Ace fellow ! You hit the nail right on the head. I brought my power optics into action and yes, it is D44H.
And you have provided the specification which would have been my next question.
The device was in a Torno switch-mode PSU, the failure blew a chunk of the package off. I've found one piece of the plastic which has no marking on it, I shall have a look around on the floor to see if I can find the fragment that follows the H, so would have the code number.
Anyway with the info you have given I will be able to repair the PSU.
Really appreciate your help.
Hope to see you on-air one day, TNX es 73, Denzil G3KXF.

Who knows what they paid...? When it was a reasonable, small amount they
would probably put it in the public domain themselves... it very much
looks like a desparate last attempt to recover some of the money spent on a
program nobody is interested to maintain anymore.

Here is something to help you LEARN code.
DO not torture yourself learning Morse three time 5 wp 13 wp and so on,
that is the ARRL method and is wrong.
I taught my nephew Morse at 35 WPM from scratch.
Unfortunately he is not interested in radio, he resonates at frequencies
where girls resonate.
Get a computer program that generates code, set it on ONE character at a
time and DO NOT count dahs and dashes, learn to recognize the sound, or
the melody, of each character one character at a time (learn to
recognize the sound).
There is no melody on 5wpm but there is plenty on the higher speeds.
when you done schedule a QSO with me.

My goodness, that happened over 40 years ago. I'd guess that less
than 1% of today's hams were licensed when that occurred. The other
99% probably think that 11m has always been a citizen's band.

I believe the "debate" you mention is based on the lawlessness
some CBers display, especially those who are operating above
28 MHz; IMO that's a main cause of the animosity hams feel towards
CBers.

>Why use limited equipment? And ham gear is very cheap at
>hamfests.

For me, the main factor isn't the price of the gear. It's the fact
that a lot more people probably have CB's available in the area than
ham radios.

Yeah, I spent lots of time with these guys discussing our commo gear
and that was about the only difference I could find. The difference
between our communications was huge.

(snip)

>Which means that they are targets for incoming artillery.
>Get an automatic repeater, use solar power. Then you

In a combat scenario incoming artillery would be a big concern of
mine, but in the survivalist situation I have in mind, I doubt there
would be that much of a problem with artillery.

>Remember, 10/11m is not to different from the military 30
>to 88 Mhz band. And there are repeaters for 10 m.

Yep, but there's still the problem of availability of radios. Even
right now when things are normal CB's probably outnumber ham radios by
quite a big margin around here. Since I'd want to be able to
communicate with as man people locally as possible, that's an
important factor.

Merci! You hams are a testy lot! Make a gentle dig and look at all the responses ... obviously I am old enough to remember the event. :)

You get no argument from me as for the CB operators using illegal freqs. I have no sympathies for people who don't play by the rules. I have never ever run a linear or a "slider", nor tricked out a 10 meter rig even though I have the technical knowledge to do it.

And I don't like the foul mouthed jerks on the CB bands either.

What I was guilty of is not looking at the headers to see who I was posting to. My apologies for that, but it is too late now to trim the headers. This discussion originated on misc.survivalism and I haven't traced it back to see who started the crossposting. I am a survivalist and actively use *legal* CBs, GMRS/FRS and we even have a couple of women in the group who are into *licensed* QRP operation. It was not a discussion on the merit of hams vs. foul mouthed CBers. But such is the nature of newsgroups that things grew heated for no apparent reason. :(

The discussion as I understand it is the use of CB's in a relay net. The terms the originator used normally mean an unattended relay station to most hams, but in this case he was simply talking about a network of operators forwarding messages back and forth in an emergency to reliably cover longer distances than the nominal range of CB's.

The exercise is an entertaining one to me because I have actually lived where CB's provided a lifeline for people snowed in after a blizzard. Some of my neighbors were trapped for over two weeks before the county cleared there roads and the more distant ones messages to family/friends/feedstore were relayed into town by closer stations.

There are thousands of CB's in cars and a whole host of base stations in rural areas, and a discussion of how to utilize them in the myriad of survival situations is a necessary and proper one.

2593. Copper Electronics "not so" Specials

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-23 00:00:00 UTC
From: n7kn <n7kn@hotmail.com>
Message-ID: <wqYI5.1157$eB6.2004548@feed.centurytel.net>
Source record: 70098
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.misc

This is an email I received from Dan Asbjornsen (kb7uxe) regarding Mike Laferla (k7jml) and his experience with a 10 Meter rig bought from Copper Electronics. The letter is addressed to Jerry Seligman (w7bun) who is very active with the Radio Club of Tacoma.
I thought you may wish to share this information with other hams.
-n7kn

Hi Jerry, my sad story goes like this:

Mike Laferla K7JML purchased an RCI 10M radio from Copper Electronics (mail order)
at a cost of just under $400... Mike had the radio for about 3 months before he installed it and tried
it for the first time... It didn't work. It had cxr on am & fm,but no audio,
and nothing on ssb or cw..
He sent it back to copper for repair or replacement. They returned it saying
it was fixed..
When he tried it again, same thing, no change........ so he sent it back a
second time...
and once again, copper returned it, still not working. once again, Mike contacted copper
they wouldn't return his calls, or answer his e-mails. Mike returned the radio addressed to the
the copper VP.. they returned it, unopened.......
Mike has spent just under $100. in return charges, and still, the radio doesn't work, and it appears
that copper does not wish to face up and deal with the problem.....
Mike has contacted Ranger communications directly, and they have said, THEY
WILL make it right...
(repair or replace ?)...
So the moral of the story,
DO NOT BUY ANYTHING FROM COPPER ELECTRONICS,
THEY WILL NOT SUPPORT WHAT THEY SELL....

Hello! I've heard lots of good things about the Ten-Tec transverters for 6M. I dug up QST review on the kit, and was startled to see a noise figure measured at 7 dB! Is this a typo? Has anyone confirmed a number like that? If that is the case, it seems like it would be a great unit for casual use, but not really for more serious 6M work.

It's a longshot, but has anyone attempted any mods to it to lower the noise figure?

Thanks,

Paul WD8DKY

2596. Re: Ten-Tec 6M Transverter Performance?

I reduced the noise figure on my 10m-2m ten-tec by about 6dB. I replaced the 1N914 diode ring mixer with good Shottky diodes. I tried it on my 20M-6M ten-tec and got about 2 dB improvement. They seem to work OK. A good Ga-As FET pre-amp without an excessive amount of gain (output padded down) improved my noise figure too.

My LO xtal seems to drift quite bad. I haven't tried to cure that one yet.

Looking for the ASSEMBLY manual for a Knight T-60 transmitter.
I have the operating manual and schematic, which I downloaded
off K4XL's BAMA (I dumped the schematic to an HP-755 plotter
and plotted it out on a "D" size sheet - yeehaa!). I either
need an original manual that I can make a copy of, or a good
clean copy with all of the diagrams clearly legible.

Thanks and 73,
Dean, K5DH

2604. Wanted: RAYTHEON CB GEAR AND HISTORICAL INFO (Apelco and SBE info too!)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-23 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <FO%I5.26$W94.1140@dfw-service2.ext.raytheon.com>
Source record: 70109
Cross-posted to: rec.radio.cb,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hello to all!

I am a collector and restorer of vintage Raytheon CB radios and walkie-talkies. In addition to building up a personal collection of equipment and literature, I am attempting to document the history of the Raytheon CB line, which spans the period from 1960 through about 1972. All of the info that I collect is being shared with the company archives, which, until I began feeding them information, contained NO record at all that Raytheon had ever been in the CB radio market at all!

What I'm looking for...
I am seeking Raytheon CB radios and walkie-talkies, in any condition (but preferably GOOD condition), along with parts, microphones, crystals, owner's and service manuals, sales literature, catalogs, magazine advertisements, and so forth.

I've already established that Raytheon's CB equipment was made by the company's Apelco division. I also know that Raytheon owned SBE from some time in the mid 1960s through about 1971 or 1972. The last two Raytheon CB models sold were SBE products with Raytheon logos on them. Apelco also made CB gear for Webster, Sears/Allstate, and other brands.

I'd like to correspond with folks who had some first-hand experience with Raytheon, Apelco, or SBE CB radios from 1960 through about 1972. If you worked in the CB business for one of those companies (manufacturing, design, sales, etc), or were an independent dealer who sold or serviced those brands, please contact me and share your experiences. Unless you have some real historical information, I'm not really interested in correspondence from folks who owned or operated those radios (nothing personal, but I'm really seeking historical data only at this time).

Visit my Raytheon CB radio web site:
http://www.qsl.net/k5dh/raytheon.html

Sorry if any hams are offended by my CB-related posts being placed on three ham radio newsgroups. The fact of the matter is that most of the Raytheon CB historical info that I've collected to date has come from hams and not from CBers!

This is not uncommon for a transverter. If you really need a better
noise figure, you should be using an external pre-amplifier close to
the antenna. Why destroy the dynamic range of your transverter by
installing a pre-amp there, after you've suffered all those
transmission line losses?

And in any case, the transverter only puts out ten watts. You'll
probably want some sort of tower mounted PA/preamp for serious DX
work.

The figure may seem high in comparison to the low noise figures that you see advertised and claimed. The high ambient noise on 6 meters, both man made and atmospheric make the need for low noise figures on six a moot point. You would hear just fine with a 7 dB noise figure.

hi all

I want to make a small, lightweight transmitter to use in tracking my falcons.
It needs to be dead simple, small (bout as big as the last joint of your little finger excluding antenna) , run on 3v, transmit at 418mhz and weigh about 8-10grams.
All it needs to do is generate a pulse about every second....nothing else.
I've got a receiver (dedicated to 418mhz)
Range needs to be something around 8-10 miles line of sight

If someone can help, please keep it simple!!! ie a parts list and circuit diag.

To be honest instructions would help too......along the lines of connect this to this etcetc ..... :)

Thanks

I recently acquired an HTX242 radio, all seems to be in good shape, except there is no TX or RX audio. I have checked the final amplifier, it is working. I am in the process of searching the scematics to find the problem, but any help that any of you could provide would be great.

A more detailed explanation:
the audio seems to be OK for about 1/10th of a second when switching from RX to TX, but goes away quickly to complete silence. test signal injected at C56 in the final audio amplifier produces good signal at the output/speaker. I can also hear the DTMF tones on the speaker when pressing the keypad on the microphone.

This radio has also had the freeband mod described at http://www.qrz.com/download/mods-e-h/htx242.txt performed prior to my obtaining it.

I am sure something simple is amiss with it.
I have also posted a file with the schematics if you wish to download them. the URL is:
http://www.kd6oji.f2s.com/HTX242.zip

I have a Kenwood TS-520 HF rig 80-10 meters in very good condition.....There are few scratches on the cover and call sign engraved under the carrying handle.....It puts out full output 100 watts and would make a good starter rig or back-up.....I have the original manual and the original inner and outer cartons.....I will take $200 shipped on the East coast and from the Midwest to Ca. I'll split the shipping.....Also will consider some sort of a trade of equal value.....I can be reached at (508) 821-2993 or e-mail for more info.....WZ1U Steve / Lakeville, Ma.

Have pictures upon request !

I had it Sold, but never received the check.....

Frank,

The first thing I would go after is to check that the power supply is
stable.
Then I would
see if one of the frequency-determining components or a decoupling cap
might
have failed. Is the frequency drift associated with a particular band
switch
setting?

73,

Brian W6BY

Well, what the heck did Mike expect from Copper Electronics? Their main business is the sell of radio equipment intended for illegal use in the CB band, which suggests they don't have a lot of respect for the law (so much for the character of the owners and employees).

In other words, if you're dumb enough to buy something from a sleazy company, then don't be surprised when that same company treats you in a sleazy manner.

>we are doing now. It's just the DOS version doesn't get any work done on it.

I'm not suggesting your company desperately needs the money, I just think
you are desparately trying to recover some of the money spent on a dying
system.

>What I am trying to do is allow some ham or group of hams an opportunity to
>support the DOS product and possible make some extra money for THEM since WE
>are focused on Windows.

If that is what you really want, then you should give the sources to
someone at little or no charge, and sign a contract covering the price at
which upgrades are to be sold and the fraction of that amount that is to go
to CSS (maybe up to a maximum).
Then the risk stays with you, and you still allow someone to make money and
get your fair share of it.

>We had discussed putting it into the public domain or with a GNU license but
>decided that the resources on supporting it would take away from our Windows
>products.

When you put it on a server, with a GNU license and a clear indication that
you are not going to do further support, you will need no further resources
to support it. There even are special websites for "orphaned software" to
do exactly that. Others can then take up the opportunity to step in as a
new maintainer/coordinator.

>Fact: There are 80,000 Pk-232 that were sold by AEA
>Fact: Each one of them had PcPakratt lite included.
>Fact: Each version of PcPakRatt lite and PcPakRatt II has Y2K issues

Fact: Y2K has now been underway for some 300 days.
Probably most users of non-Y2K-aware programs by now have realized that
something needs to change, and when the original distributor if the program
does not release an upgrade, the option is to change to another program.
If Y2K issues were a motivation to buy an upgrade, you are at least a year
too late with this move. The "impulse" Y2K upgrade buyers are now all
gone. The Y2K patch should have been available, or at least announced,
at the time the problem occurred.

Yes, I "Fixed" my blown 2 meter PA.

They didn't heat sink the PA properly, the ceramic substrate cracks!
I "welded" the traces back with solder and it has worked for last few
years that way! ADD the heat grease!

The 6 meter PA has a potential problem easilly fixed...
The DC power connection to the Transistor is just attached with a solder
filet.
ADD a tinned wire to the PC board around the power pin! and re-solder.

One of my surface mount resistors on the front panel was not soldered.
It would not turn on in cold weather! (Or it would howl if you
transmitted!)

But all in all I LIKE my 741 for the last 5 or so years.

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Al,
I had a 741A for a couple of years and decided to sell it to help finance my HF mobile I wanted. I missed the 741 so much, I started a search and could not find one. I bought a new 742 instead. Both great radios. I noticed teh problems that others have listed adn that is about all I have had also. The 2 m final going out and an easy fix.Good luck in your choice and have fun with the unit.

Do you know if the boom-headset can be purchased as a separate item for
those who already own a 706? And if so, how much does it cost etc.

Hi All,
Just got started on 10 M and would like to find a nice working HF radio covering
at least 160, 80, and 40 meters. Tube units, solid state ok and SSB is not necessary, AM
fine.

Thanks,

Well, so long as no one bids over $79.95, no one will get screwed.
Course, then, at $79.95 or over, you might as well as buy it new. At
least, then, you'll know it hasn't been dropped from the top of a
tower or something :-)

I am selling my ham station as one complete package, I do not want to split anything up. Package is priced at $375.00 + actual shipping costs and includes;

TS820s w/original manual
Shure desk mic
Kenwood hand mic
Kenwood sp520 external speaker
Timewave DSP9
MFJ deluxe HF SWR Wattmeter
2 to 1 coax switch

All items are in good working order. Rig tubes are fine. I have owned this setup for about 5 years. Cosmetically everything is probably an "8" showing a little wear, but again, everything works fine. The wattmeter is new. If interested contact:

The only problem I have had with mine was recently when I blew
> the 2-meter final amplifiers. Cost about $80 for a new module, and
> about 30 minutes to install. I have really enjoyed my 741A for a long
> time.

Hello Al,

I have the TM-741 as well.
It is a fine radio and has been fairly reliable.

Ditto on the blown final.
My 2 meter went out this year too.
I obtained a replacement RF module from RF Parts in California.
Took about 30 minutes to replace and around $80 as was said.
I guess 5 years or so is'nt too bad a service for a final module.
The fan on the heat-sink is quick to turn on and is a little on the noisy
side but is not really noticeable in the car.

It does have more features than I have ever learned to use though.
I always am referring to the users manual for instructions for those not
so often used features.
I even keep a copy of the quick reference guide in my glovebox.
It even has games you can play on it. (BTW I never use this)
The bonus 800 MHz receive is a nice feature and the generous memory
channels would take a while to fill up.

I do experience some interference(broadcast TV video/audio carrier)
on my 440 receive just outside the Ham Bands. The Ham band is
interference free. Also no intermod on 2 meters so the receiver is
above average in this respect.

I bought the remote panel display cables and like the feature of the
detachable display.
I also bought the tone decode and the DTMF modules.
These allow CTCSS decode and direct keypad entry of frequency.
As you can tell I must have liked this radio considering all the options
I purchased for it.
I also had the optional 10 meter module installed but recently sold it ,as
now, I have an ICOM 706 in the car and don't need duplicate band
coverage.
I like the radio so much ,as a matter of fact,
I am considering moving it into the house for base use.

Hope this helps.
Good Luck on your search

Eddie Bryant

I wish that folks would get it out of their heads that the average ham
on 75 meters is an Extra.

I would wager that 90% of the crowd that makes the most noise and
creates the most negative reactions to 75 these days are NOT holders of
an Extra ticket.

The Extra band segment is way at the bottom of the band, not up in the
3800-4000 segment where all the mess is located. Listen down there
sometimes where the REAL Extras hand out and see the difference.

C'mon folks, let's kill this particular urban legend. It just isn;t
true!

I am looking for a pair of 2watt+ / 2Ch+ (or greater) UHF portables.
Preferably covers GMRS. I am a licensed ham (KF4MBI) so I will
consider ham equip. but it has to be in good shape and I need a set.

ie. Icom F4xxx, Spirit Pro SU22xxx (2w/2ch), kenwood, etc.
Even midland if I had to. :) :)

I currently have the following that I would be willing to sell / trade:

3x Spirit Pro 1W/1Ch VHF w/charger, new batteries
2x Spirit Pro 1W/2Ch VHF w/1x desk 16hr charger, batteries

Thanks!
Brian Wallace

Anyone that can be of assistance to me would be much appreciated. I recently pulled out an old ICOM 551 All Mode 6 meter rig from the "warehouse" (minus the FM module, I have a HT with 6 meter FM) I have been talking with a handful of HAMS that have been telling me that 6 meters is opening up again. That was enough for me to dust off the ICOM and check it out. It is operating within specs but so far, I have only had a chance to tune the band at night.

Has anyone had any luck on 6 Meter SSB lately and what times and frequencies are you making contacts on? The 551 is / was a great little rig and I would really like to put it to use. Many years ago I made contacts out of Europe and the Pacific Rim and would love to see this action return on 6 meters.

Many thinks in advance
Mike

PS - And if anyone knows where I can get the FM module for this radio, please let me know.

2655. FS: WATTMETER (Coaxial Dynamics Model 81000-A)

Source record: 70054

I admit to not listening too often during the day, but I usually turn
on 6-meters when I first enter the shack to see if anything is there.
From my QTH it has been deader than the proverbial doornail lately.
Had some good openings a few months back. I have a 5-element beam on
a tower, so it's not as if I don't have enough antenna if something
was there. QST reports periodic openings, but I never seem to be
around at the right time. Just keep trying.

That's absolutely correct. If you improve the noise figure, you won't
hear any better because the *system* noise level is determined mostly by
external noise.

A preamplifier would also be a bad idea because it adds gain, which
subtracts directly from the strong-signal handling - you may end up
hearing *less*, not more.

Note: this is the situation on 6m. On 2m the external noise level is
less, so the optimum NF is lower. On 70cm it's different again.

Hi,

Thanks for reading this. I'm trying to complete my collection of equipment made by R.L. Drake Company.
I'm still looking for MR 3 and MSR-1. The receiver may be working or not-working. Units in any condition are of interest.

There are also some other Drake units I'm still looking for. Below is my updated "Drake Wanted List". I have long experience in buying equipment from North-America and Europe, and I have several referencies. A friend of mine in Indiana may export for you if you are in USA.

DRAKE EQUIPMENT WANTED, UPDATED OCT. 24, 2000

- AN-5 ANTENNA KIT
- HPF100 HIGH PASS FILTER, ATTENUATES 0-52MHz
- IN-4 DC TO DC INVERTER (NOT THE IN-4B)
- L77 LINEAR AMPLIFIER; SIMILAR L7
- LN-5 INDUCTUBE; AC POWER LINE FILTER
- MMK-33 MOBILE MOUNTING KIT FOR TR-33C
- MN77 MATCHING NETWORK
- MN4438 MATCHING NETWORK
- MN4439 MATCHING NETWORK
- MODEL 505A POWER RECTIFIER UNIT FOR TRANSMITTER AN/ART-13A
- MODEL 522 POWER RECTIFIER UNIT
- MODEL 579-60 LOW PASS FILTER, 67MHz CUTOFF
- MODEL 587 AUDIO BAND PASS FILTER FOR USE BETWEEN MIC. AND TX
- MR-3 MARINE RECEIVER
- MSR-1 MARINE RECEIVER
- R77 COMMUNICATIONS RECEIVER; SIMILAR R4245
- R77-SM COMMUNICATIONS RECEIVER; SIMILAR R4245-SM
- SPEAKER MATCHING SPEAKER FOR THE 1-A RECEIVER
- TR77 TRANSCEIVER; SIMILAR TR4310
- TR-V MARINE VHF-TRANSCEIVER
- TV-300-FMT BAND REJECTION FILTER 88-108MHz
- TV-300-10HW HALF-WAVE HARMONIC FILTER
- TV-300-15HW HALF-WAVE HARMONIC FILTER
- TV-300-45T BAND REJECTOR, ADJUSTABLE 40-46MHz
- UHF-300-HP HIGH PASS FILTER

Thanks for your help to make my collection complete!

Sure it is. A ham can run an amp on any band as long as the power level
is kept within the levels specified for that band or the ticket held.

You can make that same preamp for dirt cheap. I use the same on my 730.
Not much to it. I sure wouldn't pay a load of money for one. I have one
"homebrew" that I run a studio mike into. Works great. And I have one
smooth sounding 730 with that mike. It's only one transister, and a few
resisters, pot, etc. Fits on a 2 inch x 1 inch strip of circuit board.

I have the H.F. module for the Yaesu FT-726R that is surplus to my needs. This module allows one to work the Russian satellites (RS-13/15) or the 15, 12 and 10 meter bands. Works perfectly! Supposed to be 10 watts but, in my rig, I measure a minimum of 10 and up to 15 watts output on the 10 meter band. This unit is rare as owners of FT-726Rs can attest: the module is not listed in the owners operating manual (but it was available!). Genuine Yaesu with cables and mounting hardware. Offers? ns1z@arrl.net

Hello all, recently I bought an Icom IC-901A from someone on Ebay and it was supposed to be working perfectly, it's not. A number of the buttons on the right hand side of the control head (Call, Band, Mhz etc.) are broken (the little plastic parts on the back of the switches are all smashed) so I'm looking for a defective control head (defective pc board or display) that I can get some plastic switch pieces from. If you have a control head that all the switches work on (say the LCD is bad or the PC board is broken, let me know how much you want for it.

Thanks, Jennifer

Look around 50.125 for the US calling frequency. If there is any activity (outside of local stuff) it will be there . The overseas calling frequency is 50.110. There is some movement to make 50.200 the US calling frequency. Most of the time the band is open from my location during the daytime hours on the east coast. You can listen on ten meters and if that band is not open, chances are that 6 will not be either, most of the time.

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:

The 6 meter module for the 551 is a tough animal to come by Mike. You might have to keep checking around the ng's or even E-bay for a rare sighting.

Six meters is generally open for DX from roughly the end of April to the end of August. There sometimes is a small amount of DX to be had around Christmas time give or take a few weeks. When the bands are "up" contacts are plentiful and European and Japanese contacts are there, depending on what part of the country you live in. I'm using a 100 watt rig with a 5 element beam at 55' and made some contacts to Spain this past summer!!

You might experience some enhanced ground wave around this time of year, but you will probably find that its rather dead for the most part.

Good luck and 73,

Chris

I recently spent almost three full afternoons and evenings calling about twice an hour on 50.125, 50.110, and 50.200, without a single response. This was a repeat of an experiment I tried in Washington State about six months ago, with the same results. And a friend of mine in Washington spent even more time trying to make a contact, again with no success. In fact, I've only had three contacts on 6 meter SSB in the last year (all three contacts in WA, prearranged on other bands). And I've had no contacts whatsoever since arriving here on the east coast.

As far as I can see, 6 meter SSB is totally dead. Of course, its not just SSB since I had no more success recently with FM. So I guess I really should say that the 6 meter band itself is dead.

In my opinion, its a total waste to have a 6 meter rig and, if I had it to do over again, I would not waste my money buying one.

Thanks for the link, dont know how I missed it... By equipment I was thinking more of a 10 mtr reciever/tranciever like the HTX-10. Several years ago I had great fun working mode A. Maybe if I get good at that again Ill try the others.

Thanks again. cul Art. KF7GD

I have 2 Carnel Labs (formerly Eaton) EMI RFI receivers for sale. The first is an NM-17/27A, covering the frequency range of 9Khz to 32Mhz. The second is an NM-37/57A, covering the frequency range of 32Mhz to 1Ghz. Both receivers have peak, quasi-peak, feild intensity and special peak detectors and are great for pre-compliance or full compliance testing. They meet mil std 461 and 462d. Both are calibrated and tracable to NIST and carry a one (1) year warranty. I will pay shipping in the US.

The package price is $19,500
The NM-17/27A alone is $11,500
The NM-37/57A alone is $13,000

any questions or for a list of complete specs E-mail me at mbender826@aol.com

I've been on 6m for about 20 years now. I've worked WAS and am at about 57 countries. It is a band that is a challenge. I run my my 551 from when I wake up until I go to bed. (8am to abou 11pm) I've recently worked TX0 from here in Arizona. So the band does open up from time to time. Even with a solar flux of 161. Preferably the flux should be over 200. The openings other mention are sporadic E openings which happen from April to the end of July. And November , December. The best bet is to program the 551 to scan between 50.100 and 50.130. The go on hf or do something else. If the rig is scanning and there is any activity on the band you will hear it. I've found that the fm module is quite expensive if you find on on eBay. You might be better off using a seoerate 6m fm rig.

I have noticed that my original IC 756 has an extremely scotch S-Meter.
Even with the Power Amp 2 turned on, even the strongest signals will
never register more than S9 + 20 dB.

Anyone else experience this? Can anyone tell me where the adjustment(s)
are
for this?

Thanks

Tune the bottom part of the band for the beacons and that will tell you
if the band is open from your QTH to other parts of the country. Be
sure your beam is oriented horizontally. A vertical antenna can cost
you up to 20Db in signal strength! With November and December comming,
there will be an increase in sporadic E openings. Good luck.

I recently picked up an HTX-10 at a swap meet. It is a nice radio but
for sat work, where you want to be transmitting and receiving at the
same time, it tends to overload easily. I couldn't use it at all to
work RS13 in mode K (15 mtrs up, 10 down). The 15 mtr tx completely
wiped it out. Going up on 2 meters (the usual way for me) was useable
but not like my regular HF rig.

RS13 will be making evening passes over the US beginning again in
early December. See you there.

2708. question about Icom FL-101 filter

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-25 00:00:00 UTC
From: Mike Ryan <w4mjr@home.com>
Message-ID: <39F77140.7B5451B1@home.com>
Source record: 70094

I have a Icom IC-765 that I am adding the opt filters. It already has
the FL-52A cw filter in it and I just put the FL-101 cw filter in it.It
does not at this time have the IC-53A installed. My question is that I
can't hear any differance in the CW mode after I added the FL-101 filter
. Sounds the same in the narrow mode as if only FL-52A filter.
Should I have got the 53A first and then installed the FL-101 ?

RS15 is sometimes working, most of the time it is not. RS12 is
switched off but RS13 is working well. It is probably the most popular
sat. It is currently in mode KA (10m down, 2m / 15m up). The AC5DK
web site (see the AMSAT listing of RS13) has more info.

Since you are considering purchasing equipment, consider FO-20, FO-29.
They both work great but suffer from a lack of operators.

2717. Re: Mobile HF Exposure Levels

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-25 01:58:04 UTC
From: Richard Ferguson <raferguson@att.net>
Message-ID: <39F63EB7.32DA8A8C@att.net>
Source record: 70060

Do the ARRL formulas take into account the fact that the operator is
inside a Faraday cage (his metal car)? I assume that the RF level
inside the vehicle is much less than outside. I have never worried
about RF inside the vehicle if the antenna is outside the vehicle. The
rear window opening is a kind of a slot, probably not more than 2 feet
wide, while the wavelength is probably on the order of 30 feet, so it is
hard to see much RF getting in a slot less than 0.1 wavelength. Even on
2M it is hard to get much RF from inside to outside the vehicle.

Note that the regulations offer an exemption from RF safety rules for
100W mobiles keyed by microphone, although not for repeaters or remote
bases in a vehicle.

I don't see why this is called a war. When those radios were cleared out at $ 129, how in the world can you beat that much radio for that little price. I have owned the 212 and 2 of the 242's and think they all worked great, both mobile, base and on packet.

If you can find a used one for less than that price - buy it.

My 2 cents worth!

From: Richard Ferguson <raferguson@att.net>
Message-ID: <39F79D8F.EC81125F@att.net>
Source record: 70009

Unfortunately, 6 meters is seasonal, and we are off season right now.
June is peak season. I enjoy 6m a lot when it is open, but when it is
dead, it is really dead. Just set up a radio for scan, like the guy
said, and don't expect much this time of year.

2736. AZDEN PCS-7000H 2 METER FM MOBILE

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-26 04:05:36 UTC
From: Patrick Mason <Jimmyk@mindspring.com>
Message-ID: <8t8ak9mei1@slb3.atl.mindspring.net>
Source record: 70011

I have a very nice Azden 2 Meter FM rig with 20 memories, DTMF Encode and decode with Encoded squelch feature. It is a 9 out of 10 in looks and a 10 in performance. I have mainly used it as a surplus rig indoors but it has been mobile for a week or so. I have upgraded to a 2000H for the car and a 706 for the house and really have no need for another extra 2 meter rig.

I purchased it at the Richmond VA Frostfest hamfest brand new shrikwrapped last January. There is no warrantee since Azden sold out to AES. I have not only the operator manual but also the service manual.

I will ship to anywhere in the continental 48 for $100 firm. 30 day money back guarrantee if it is shipped back to me in the same condition it was shipped to you in, no questions asked.

Thanks for reading this post,

73

From: n7dal@my-deja.com
Message-ID: <8t8as6$l36$1@nnrp1.deja.com>
Source record: 70013

I need a roughly 30A power supply that is variable from around 2V to 14V. Only linear supplies are available with this range, so it won't be a switcher. I have narrowed it down to the Alinco DM340MVT or the MFJ 4035MV. I would like to hear good and bad experiences to help me decide. Thanks.

Message-ID: <8t8ca6$p8h$1@slb6.atl.mindspring.net>
Source record: 70014

I have an extremely reliable HTX-202 for sale. Comes in original box with owner's manual, nickle metal hydride battery, AA alkaline battery pack, belt clip, high performance mfj antenna, battery charger and cigarette lighter plug. Does a full 6+ watts on an icom 12 bp-7 pack or on cigarette lighter plug or power supply, 4 watts on alkaline battery pack and 3.5 on 7.2 volt nickel metal hydride battery. Has pl encode and decode feature.

Has a few scratches on back where the metal belt clip goes but other than that is in great condition. It's performance is a 10. I have three of them and am selling one to make room for a dual band HT. Also comes with external hand mike. 30 day money back guarantee, no questions asked as long as it is shipped back to me in the same condition shipped to you in.

$60.00 shipped anywhere in the 48 contiguous states.

Thanks for reading this post.

All,
Please read this thread and tell me who has a problem with who.
This guy has made it impossible for me to buy anything on the web, Ive had to stop buying, as my wife and xhildren have come to the conclusion that its too much a gamble.
How is it this guy gets favorable reports, did he threaten the people he screwed? As he did me? He threatened me, should I post this, yet he has the audacity to try to back out of his word by harrasing me.
THe follwing is the thread of emails.
You be the judge.
In my opinion, this guy is a dangerous, unstable individual who need to be dealth with through the legal process.
ANy feedback, ideas on how to deal with him and this matter is appreciated.
He clearly will go to any ends NOT to back his worthless word.
He seems to believe he can and threaten people into submission.
CAVEAT EMTOR!

Jeff

If you want your money back Im sure we can come to an agreement, if you want another tuner...Im afraid, we cant...Because Im not going to buy another one......and Im not going to buy that one back, til Im assured that is in proper
condition like it was when it left.....that is the only option you have at this point...DO YOU UNDERSTAND THAT?...I could not..fail to pay you if I wanted to stay here doing what I do like I have for the past 6 years...do you understand that too?...So if you are afraid you wont get your money, arrange an escrow account and we will go thru the motions...you figure out how you wanna do it....If you talked to any real regular traders , they all told you the same thing...Murry does what he say and is a man of honor...Now lets hear you plan Jeff. If you have any contacts with KNOWN hamtraders, we will use them to go between if that helps your feeling...Ive paid more than 225 to watch a monkey fuck a football, but I ll be damned if I will do it for a weasel...73 Murray

After talking with several other ham traders last nite, we are of the opinion
that even though it makes no sense and is certainly petty on your part...the
best

I can do is take it back, if its in the same shape and whether it smells or
not,
refund your money....So I offer you this one time only opportunity...Send it
back
where it came from, insure it, pack it well...when it arrives I will refund
your
money. Anyfurther rhetoric from you will result in your continued ownership
of
said tuner....You wont have to worry about trading with me again Jeff, you
cant...I await your reply...my reputation is good, NO ONE and I mean NO ONE can
say Ive ripped em off, I will not send the money first, but I WILL send the
money and you know it...Ive paid more than 225 to to "See a monkey play
football",
its not a about money...73 Murray

All,
Please read this thread and tell me who has a problem with who.
This guy has made it impossible for me to buy anything on the web, Ive had to stop buying, as my wife and xhildren have come to the conclusion that its too much a gamble.
How is it this guy gets favorable reports, did he threaten the people he screwed? As he did me? He threatened me, should I post this, yet he has the audacity to try to back out of his word by harrasing me.
THe follwing is the thread of emails.
You be the judge.
In my opinion, this guy is a dangerous, unstable individual who need to be dealth with through the legal process.
ANy feedback, ideas on how to deal with him and this matter is appreciated.
He clearly will go to any ends NOT to back his worthless word.
He seems to believe he can and threaten people into submission.
CAVEAT EMTOR!

Jeff

If you want your money back Im sure we can come to an agreement, if you want another tuner...Im afraid, we cant...Because Im not going to buy another one......and Im not going to buy that one back, til Im assured that is in proper
condition like it was when it left.....that is the only option you have at this point...DO YOU UNDERSTAND THAT?...I could not..fail to pay you if I wanted to stay here doing what I do like I have for the past 6 years...do you understand that too?...So if you are afraid you wont get your money, arrange an escrow account and we will go thru the motions...you figure out how you wanna do it....If you talked to any real regular traders , they all told you the same thing...Murry does what he say and is a man of honor...Now lets hear you plan Jeff. If you have any contacts with KNOWN hamtraders, we will use them to go between if that helps your feeling...Ive paid more than 225 to watch a monkey fuck a football, but I ll be damned if I will do it for a weasel...73 Murray

After talking with several other ham traders last nite, we are of the opinion
that even though it makes no sense and is certainly petty on your part...the
best

I can do is take it back, if its in the same shape and whether it smells or
not,
refund your money....So I offer you this one time only opportunity...Send it
back
where it came from, insure it, pack it well...when it arrives I will refund
your
money. Anyfurther rhetoric from you will result in your continued ownership
of
said tuner....You wont have to worry about trading with me again Jeff, you
cant...I await your reply...my reputation is good, NO ONE and I mean NO ONE can
say Ive ripped em off, I will not send the money first, but I WILL send the
money and you know it...Ive paid more than 225 to to "See a monkey play
football",
its not a about money...73 Murray

All,
Please read this thread and tell me who has a problem with who.
This guy has made it impossible for me to buy anything on the web, Ive had to stop buying, as my wife and xhildren have come to the conclusion that its too much a gamble.
How is it this guy gets favorable reports, did he threaten the people he screwed? As he did me? He threatened me, should I post this, yet he has the audacity to try to back out of his word by harrasing me.
THe follwing is the thread of emails.
You be the judge.
In my opinion, this guy is a dangerous, unstable individual who need to be dealth with through the legal process.
ANy feedback, ideas on how to deal with him and this matter is appreciated.
He clearly will go to any ends NOT to back his worthless word.
He seems to believe he can and threaten people into submission.
CAVEAT EMTOR!

Jeff

If you want your money back Im sure we can come to an agreement, if you want another tuner...Im afraid, we cant...Because Im not going to buy another one......and Im not going to buy that one back, til Im assured that is in proper
condition like it was when it left.....that is the only option you have at this point...DO YOU UNDERSTAND THAT?...I could not..fail to pay you if I wanted to stay here doing what I do like I have for the past 6 years...do you understand that too?...So if you are afraid you wont get your money, arrange an escrow account and we will go thru the motions...you figure out how you wanna do it....If you talked to any real regular traders , they all told you the same thing...Murry does what he say and is a man of honor...Now lets hear you plan Jeff. If you have any contacts with KNOWN hamtraders, we will use them to go between if that helps your feeling...Ive paid more than 225 to watch a monkey fuck a football, but I ll be damned if I will do it for a weasel...73 Murray

After talking with several other ham traders last nite, we are of the opinion
that even though it makes no sense and is certainly petty on your part...the
best

I can do is take it back, if its in the same shape and whether it smells or
not,
refund your money....So I offer you this one time only opportunity...Send it
back
where it came from, insure it, pack it well...when it arrives I will refund
your
money. Anyfurther rhetoric from you will result in your continued ownership
of
said tuner....You wont have to worry about trading with me again Jeff, you
cant...I await your reply...my reputation is good, NO ONE and I mean NO ONE can
say Ive ripped em off, I will not send the money first, but I WILL send the
money and you know it...Ive paid more than 225 to to "See a monkey play
football",
its not a about money...73 Murray

Jeff

Murray has proven himself to be of questionable character on this group before. He is a racist for one. He thinks that he is always right. Just because two other bozos on this group will lie for him and say he is a good guy he thinks he is a saint. I wouldn't buy manure off him. I guess it cost you some money to find this out. You can probably sell the tuner and get most of your money back. I wouldn't worry about Murray's threats they are just that, empty threats. Later he will blame it on medication. He's an idiot plain and simple.

Barry D.

2746. Murray Neece: common THUG?, you be the judge,in his own words

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-26 12:15:29 UTC

All,
Please read this thread and tell me who has a problem with whom.
This guy has made it impossible for me to buy anything on the web, I've had to stop buying, as my wife and children have come to the conclusion that its too much a gamble.
How is it this guy gets favorable reports, did he threaten the people he screwed? As he did me? He threatened me, should I post this, yet he has the audacity to try to back out of his word by harrasing me.
The follwing is the thread of emails.
You be the judge.
In my opinion, this guy is a dangerous, unstable individual who needs to be dealt with through the legal process.
Any feedback, ideas on how to deal with him and this matter is appreciated.
He seems to believe he can and threaten people into submission.
Is there a type of syndicate on the web of people who procure for each other, thus having a vestid interest in falsly
recomending,falsly giving favorable comments on a trader for their own personal gain?
Lets see who comes out in his defense! There is a disturbing pattern
CAVEAT EMTOR!

Jeff

If you want your money back Im sure we can come to an agreement, if you want another tuner...Im afraid, we cant...Because Im not going to buy another one......and Im not going to buy that one back, til Im assured that is in proper
condition like it was when it left.....that is the only option you have at this point...DO YOU UNDERSTAND THAT?...I could not..fail to pay you if I wanted to stay here doing what I do like I have for the past 6 years...do you understand that too?...So if you are afraid you wont get your money, arrange an escrow account and we will go thru the motions...you figure out how you wanna do it....If you talked to any real regular traders , they all told you the same thing...Murry does what he say and is a man of honor...Now lets hear you plan Jeff. If you have any contacts with KNOWN hamtraders, we will use them to go between if that helps your feeling...Ive paid more than 225 to watch a monkey fuck a football, but I ll be damned if I will do it for a weasel...73 Murray

After talking with several other ham traders last nite, we are of the opinion
that even though it makes no sense and is certainly petty on your part...the
best
I can do is take it back, if its in the same shape and whether it smells or
not,
refund your money....So I offer you this one time only opportunity...Send it
back
where it came from, insure it, pack it well...when it arrives I will refund
your
money. Anyfurther rhetoric from you will result in your continued ownership
of
said tuner....You wont have to worry about trading with me again Jeff, you
cant...I await your reply...my reputation is good, NO ONE and I mean NO ONE can
say Ive ripped em off, I will not send the money first, but I WILL send the
money and you know it...Ive paid more than 225 to to "See a monkey play
football",
its not a about money...73 Murray

RETAILER IN NEED OF DISTRIBUTOR IMPORT/EXPORT. CB, AMATUER. WILL MARKET ALL LINES.

2748. IC-290a frequency tuning ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-26 13:07:00 UTC
From: Vytautas Mickevicius <ke@spkaunas.omnitel.net>
Message-ID: <39F82C74.E33@spkaunas.omnitel.net>
Source record: 70026

Hi

friend of mine is asking about behaviour of frequency tuning of IC-290A
while being "on-air".
After PTT is pressed, the frequency is going only upward - independent
of to what direction the main tuning knob is turned. Is it a native
"feature " of all 290's or his radio is ill?

I never had bothered about this when had my own IC-290A, but he is
going to try it on satellite upward link, and hopes to find his
downward signal by twiddling the frequency knob more easily. But
the frequency goes up only, and can be lowered only after the
releasing of PTT...

Any responses are appreciated via e-mail: ke@kaunas.omnitel.net
or please remove anti-spam letters <sp> from the address in a header.

Thank you, Vytas LY2PU

2749. WTB: TAIT miniphone 373 airband transciever

I tell you one thing.
If you call a crybaby someone who is promised an item has NO smell of cigarettes, and it does.If that is your idea of a cry baby, then I hope all on the web take note of who you are, and NEVER buy ANYTHING form you (ot anyone who comes out for Murray Neece) because they see nothing wrong with what he does. Read the email thread, he ADMITS to it!!!!
Read it carefully! and be notified!!!
CAVEAT EMPTOR!!
Jeff

2752. Re: Murray Neece: GOOD GUY

Newsgroup: rec.radio.amateur.equipment

But he did finally offer to buy it back! All you had to do was send it back to get a refund. Problem solved...

In this day and age, I think that is a pretty good offer on Murray's part.

73,

Paul WD8DKY

You bought a piece of used equipment at a good price and want it to smell like new. That is not very realistic. Next why bring your wife and children into the transaction, did you not make the transaction yourself?

I have dealt with Murry and everything was as he described it, in fact he sent me the equipment and waited on me to complete my part of the bargain.

As I read the messages, you were convinced you were going to get screwed and did everything you could to insure the outcome would match your expectations. All this inspite of Murry trying to work with you. IMHO You are being unreasonable about the whole transaction.

"RadioFreq0" <radiofreq0@aol.com> wrote in message news:20001026070001.13329.00003086@ng-md1.aol.com...

2754. Murray Neece: GOOD GUY

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-26 16:32:07 UTC
From: radiobuyer <radiobuyer@hotmail.com>
Message-ID: <IhXJ5.981$fv1.118692@news1.primary.net>

I for one can say Murray Neece has ALWAYS been honest and fair. I have known him for 5 years and know for a FACT he is a man of his word! Sounds to me like Jeff has a wife who makes ALL the decisions. And another thing: Murray is damn sure not a thug!! But he....like anyone else DON'T LIKE CRYBABIES. And by the way Jeff....It's YOU who has the problem.

2755. (OT) Help in putting medical control contact system together.

This is for a non-amateur application, thus it is off-topic.
However, there are no other applicable forums available
to seek help in.

Background: Very busy paramedic system needs to find
a way to bring the medical control box to the doctor in
the ER. If any one remembers the TV show "Emergency!",
then you will remember the doctor going to the console to
speak with Johnny and Roy.

I need to put an HT or a cordless phone into the doctor's
hands so they can speak with us without having to go to
the console.

Our console is a General Devices Corp GEMS 2000 Series
biotelemetry receiving station. We utilize tone-remote control
for our UHF radio (the transmitter is 10 miles away, cellular or
POTS telephone service, and tone-remote control VHF
radio (the transmitter is on the roof of the hospital).

If we were using only radio or only telephone service, we
would have no problems. However, we have to provide a
high degree of redundency to ensure reliability of the system.

If we used only radio contact, we could utilize HT's in the ER
for the doctors. They key up the radio and with a short voice
delay, we could ensure that gets to the field.

If we used only telephone contact, we could give the doctors
a cordless phone to walk around with.

Using both, we run into problems. If the ER docs use the
cordless phone, and we contact using radio, there would have
to be some sort of VOX system in place. If there is a lot of
background noise,
then the system would always be
in transmit.

If the paramedic's use telephone, and the ER has HT's, then
the same problem exists.

Question: Is there any suggestions from the group on how
to work around this dillema?

Do you really think I am going to see a nickel of it?
Why would I send it back directly to a confirmed liar?
Once taken....., twice taken.......!
JEEEEZ!
Jeff

2759. Icom 781's discontinued

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-26 17:53:18 UTC
From: Andy Wallace <andywallace@home.com>
Message-ID: <ic_J5.122637$g6.56850271@news2.rdc2.tx.home.com>
Source record: 70037

From: "Andy Wallace" <andywallace@home.com>
Subject: Icom 781 retired
Date: Thursday, October 26, 2000 10:24 AM

Will be interesting to see what happens to used 781 prices. I just learned that Icom has discontinued the radio. Hope they will replace it with a high-end "super radio" but noted in the new CQ that we picked up only 1/2 of 1 % new hams total in the last year with the lower CW requirement and only 18,000 new generals moving up from Tech Plus. I don't think removing all CW would make much additional difference. The great influx of "CBers" that some fret about is a joke--we are shrinking unless we can get the young computer generation interested in ham radio. Alpha gave it up--who is next?

Andy K5VM

2760. RF Concepts 2-317 Pinout?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-26 18:15:52 UTC
From: Paul Knight <paul.knight@prairiecomm.com>

Hello! I just picked one of these up, sans manual. Can someone with a manual tell me the pinout of the accessory jack, and whether the key line requires ground or +V? I would like to key the amp directly via my radio.

Thanks much!

Paul WD8DKY

HAMFEST October 29, 2000 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - October 29, 2000

LINDENHURST, LI - NY

On October 29, 2000 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Walter Wenzel KA2RGI at 631 957-0218 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. Wife's and children under 12 admitted with no charge.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam session. Current ARRL/VEC fee is $ 6.65,
exact change is appreciated.

Talk-in will be via GSBARC Repeater on 146.685 -600 136.5 PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 136.5 PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704

Hi folks,

I'm looking for two of the small knobs for a Knight T-60 that
I'm fixin' up. They don't have to be pristine, they just have
to look decent.

73,
Dean, K5DH

Thanks Jeff, it is hard enough out here trying to find someone honest
to deal with, you have just removed one of the "speed bumps" in my
dealings. As I reading ALL the posts,,,,,,,,,,,, kept thinking,,,
bipolar. ..... I think WE are all learning , in this day
and time, more and more we cannot trust our 'fellow man' with his word
or his handshake, creating an ever increasing need for lawyers.
And "there" again, it starts all over again. :)

Hi Paul
If this amp is the same as the 2-117 then the pinout of the 5 pin din
is as follows

the pins are as numbered below

2
4 . 5
. .
1. .3

SSB FM
1.------------------------o ï¿½ o
|
2.-----------------o ï¿½ o |
POWER | -+ 10mfd
to J2 3.---+13.6----------.| -
PREAMP | |
4.-----------------o ! o |
|
5.----------------------------.

*note ï¿½ and ! denotes a switch leg and o denotes a switch contact

Jeff...

I bet Murray has conducted hundreds, if not THOUSANDS of transactions via the NG's and the various ham classified sites. He is NOT going to lose the reputation that he has EARNED over your measly $225 (or however much it was...) He offered to take it back and refund your money, yet you refuse. That is absolutely ridiculous! If you were dealing with, say, AES, and had an issue with a rig you bought from them, I'm sure they'd take it back and refund your money, but I'm also absolutely positive that you'd have to send the product back first. Where's the difference here??? Murray has been around for years, and I don't think he's going anywhere anytime soon. That is, of course, unless he gets fed up with dealing with people like you. Thank God there are people like him. Give it up...you're gaining no respect here...

I don't know if Murray smokes or not, but if he does, then chances are, he's lost the ability to tell whether or not a piece of gear has a strong smoke smell. He could have told you that he didn't smell anything, without necessarily lying.

Send it back for a refund, and whine some more if you don't get your money.

The HW-16 not exactly QRP. It does a bit more than that. About 90w input
if I remember right. Uses a single 6146 I think. Should do near 50w out
I bet. Been a couple of light years since I messed with one of those. MK

Those are easy to tune. The others gave the basic procedure. A couple of details... When fully loaded on that rig you will pull appx 250 ma plate current. And should be in the range of 120w out. Also resting current should be 60ma. I ran one of those things for years except was a HW-100. About the same thing. Just hope your rubber O rings aren't shot...They dry up and break. MK

Hi all. I have four nice items on Ebay for sale. The T4X-C auction
end Saturday October 28 at about 7:00 PM California time, and the
others end on Sunday, October 29 from about 6:15 to 6:45 PM California
time.

Drake T4X-C: Excellent, L@@k
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=477911482

DX Engineering Speech Processor for Drake
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=478931596

Drake AC-4 Power Supply: Guaranteed!
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=478953755

Drake MS-4 Speaker: Excellent!
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=478969726

At the present time, the T4X-C is at $150, the DX-Eng is at $160, the
AC-4 is at $50, and the MS-4 is at $50.

All items are fully satisfaction guaranteed.

Thanks for your interest and good luck with your bidding. You can
email questions to NeilR@innermedia.com

I have good news and bad news; first, that's a great amp; second, if memory serves, as wired from the factory, switching is +V, however the amp can be reconfigured internally to switch on ground.

The bad news is my documentation is in a file cabinet in storage 700 miles away. I should be going there within a month, and if you haven't gotten any better reply before then, I'll get it out and copy it for you.

The other reply you've gotten here covers the pinouts.

Source record: 69964

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Paul
I just saw this and I hope it helps

" EXT KEYING: The amplifier is factory set for "plus voltage" keying.
Most transmitters do not provide a "ground" during transmit, but most do
have a positive voltage at their back panel. You must consult your
instruction manual, for your particular radio, to locate this voltage.
This is then connected to the phono jack on the amplifier.
To change the amplifier from "plus" keying to "ground" keying you must
remove the cover and move the wire from the "+" pad to the "-" pad."

Hope this helps!

2788. Re: Anti-ebayers try filters

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-27 15:08:51 UTC
From: Robert Allen & Marsha Camp <mcamp@together.net>
Message-ID: <39F99A83.47645BA8@together.net>
Source record: 69966

To any one who wants to filter ebay using netscape 4.7
and
maybe earlier versions

I'll use the format ">MENU NAME or BUTTON>MENU NAME or
BUTTON" to
indicate double left mouse click on the MENU NAME or
BUTTON
following the ">". Don't type in quotes.
NS has a help file that also describes how to set a
filter and can
be accessed from the filter window.
To set a message filter in Netscape 4.7 (this works on
previous
versions I think but I don't remember how far back). You
start in
NS Messenger and do the following:

>EDIT>MESSAGE FILTER
>NEW type "ebay" in "filter name" box and "ebay" the
empty box
below the "advance" button >DOWN ARROW in "then" box
>DELETE(there are other options that allow moving
messages to
other folders)
>at this point you can either >OK>OK or >MORE
>DOWN ARROW in "then" box
then type "fa" or "auction" in new empty box below the
"advance"
button
>DELETE
>at this point you can either >OK>OK (sets filter) or
>MORE
(allows additional filter words to be set) type "fa" or
"auction"
in new empty box below the "advance" button
when you have set all the words you think will describe
the type
of message you are trying to filter
>OK>OK

There are many other ways that filters can be applied, I
use them
for any e-mail spam that doesn't have my address, e-mail
spam that

does have my address, separating ebay or e-mail NGs
messages from
general messages. Works quite well once you figure out
the filters
page.
Good luck. I'll answer any questions I can.
Bob KG1FRW 73s

Source record: 69968

PLEASE resolve this now!

Amen. Jeff, you initially asked for feedback, and after reading all the threads I think Murray was more than accomodating. I also think you should have taken the refund of your money when offered. Jeff; with all due respect, why did you decide to bring Murray to task in the court of public opinion? I think it was ill-advised to air your dirty laundry in public like this. Did you think public pressure would help resolve your differences? Murray's business practices are not subject to dictation by the body politic, and frankly I am more confident in Murray's business practices NOW than before I read all these threads. I have never bought anything from Murray and don't know him, but, having read his replies, he looks like a straight shooter to me.

Having said that; it doesn't matter what I think, or what anyone else thinks. The appropriate thing to do was to try to work out your differences, and failing to achieve agreement you might have posted a message like: "I bought something that Murray said was smoke free and I smelled smoke on it and he wouldn't replace it, he would only offer me a refund." Then we could have all marked it as duly noted.

We have all learned a lesson here, which is: When buying a piece of equipment, it is appropriate to ask, "what if I don't like it when I get it, or more specifically, what if we materially disagree on condition, looks, operation, or 'smell'." Most large businesses spell out their return policies. Murray, it may be prudent to put your return policy in your signature line henceforth.

FWIW, My .02, IMHO, etc.

Hi...I have just obtained a used Yaesu FT-990 and find it's a fine radio, get great audio reports with it and I've explored all it's many functions etc. But one charasteristic that it seems to have is a very stingy S meter. I'm quite experienced (many long years on the bands) and a signal that I'd judge to be maybe 30 db over will show as about S8/S9 or so. It seems to have normal sensitivity but this S meter thing is rather annoying...I find that practically every contact gives me MUCH better reports than I see on this meter. I'm certainly not above adjusting the meter sensitivity but I have only the operators manual which doesn't mention this procedure (if there is one!). Anyone have any info for me?...tks for reading this...

BTW my call is VE1EO (PEI Canada)...

2791. FAST CASH

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-27 16:43:55 UTC
From: mcdonnellfam@home.COM
Message-ID: <39F9B0F7.A30543EA@home.com>
Source record: 69969

Dear Friend:
With a couple of minutes of your time I'm
going to show you how you can
turn
$6 and
6 stamps into thousands of dollars. Don't
get skeptical yet, just read
the
letter and then decide if you want to invest
a measly $6!!

HOW TO TURN SIX DOLLARS INTO SIX THOUSAND:
READING THIS COULD CHANGE YOUR LIFE! Wow!!
IT DOES WORK!

A little while back, I was browsing through
newsgroups, just like you
are
now, and came across an article similar to
this that said you could make

thousands of dollars within weeks with only
an initial investment of
$6.00!
So I thought, "Yeah right, this must be a
scam", but like most of us, I
was
curious, so I kept reading. Anyway, it said
that you send $1.00 to each
of
the 6 names and address stated in the
article. You then place your own
name
and address in the bottom of the list at #6,
and post the article in at
least 200 newsgroups.
(There are thousands) No catch, that was it.
So after thinking it over,
and
talking to a few people first, I thought
about trying it. I figured:
"What
have I got to lose except 6 stamps and
$6.00, right?" Then I invested
the

measly $6.00. Well GUESS WHAT!?...Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just

kept coming in. In my first week, I made about $25.00. By the end of the

second week I had made a total of over $1,000.00! In the third week I had over 10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly.
It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how

this works and most importantly, WHY it works... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!
Six Bucks and Six stamps... not a big deal to get lots more $$$$. IT WORKS!!!!
Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in! It's easy.
It's legal. And, your investment is only $6.00 (Plus postage).

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it really works! If all of the following

instructions
are adhered to, you will receive
extraordinary dividends.

PLEASE NOTE:
Please follow these directions EXACTLY, and
$50,000 or more can be yours
in
20
to 60 days. This program remains successful
because of the honesty and
integrity of the participants. Please
continue its success by carefully
adhering to the instructions.
You will now become part of the Mail Order
business. In this business
your
product is not solid and tangible, it's a
service. You are in the
business
of developing Mailing Lists. Many large
corporations are happy to pay
big
bucks for quality lists. However, the money
made from the mailing lists
is
made from people like you and me asking to
be included in that list.

Here are the 4 EASY, EASY, EASY steps to
success:

STEP 1: Get 6 separate pieces of paper and
write the following on each
piece
of paper "PLEASE PUT ME ON YOUR MAILING
LIST."
Now get 6 US $1.00 bills and place ONE
inside EACH of the 6 pieces of
paper
so the
bill will not be seen through the envelope
(to prevent thievery).

Next, place one paper in each of the 6
envelopes and seal them. You
should
now have 6 sealed envelopes, each with a
piece of paper stating the
above
phrase, your name and address, and a $1.00

bill. What you are doing is
creating a service. THIS IS ABSOLUTELY
LEGAL! You are requesting a
legitimate service and you are paying for
it! Like most of us I was a
little
skeptical and a little worried about the
legal aspects of it all. So I
checked it out with the U.S. Post Office
(1-800-725-2161) and they
confirmed
that it is indeed legal. Mail the 6
envelopes to the following
addresses:

1) Sue Wagner
608 First Avenue
Altoona, PA 16602

2) C. Mangan
503 Oak Ave NW
Elkader, IA 52043

3) Richard Powers
748 Battlefield Blvd. South
Chesapeake, Va. 23322

4) Ryan Palmer
6595 380th Ct.
North Branch, Mn 55056

5)Susan Moreland
233 cr 190
Longbranch, TX 75669

6)Carrie McDonnell
3130-109 Ave S.W.
Calgary, AB Canada
T2W 3H2

STEP 2: Now, you do not need to re-type this
entire letter . Simply put
your
cursor at the beginning of this letter and
drag your cursor to the
bottom of
this document, and select 'copy' from the
edit menu(or right mouse click
and
choose "copy"). This will copy the entire
letter into the computer's
memory

temporarily. Now click "Start" then
"accessories" then "wordpad" Open a

blank 'notepad' file and place your cursor
at the top of the blank page.

>From the 'edit' menu select 'paste'.(or
right mouse click and choose
"paste") This will paste a copy of the
letter into notepad so that you
can
add your name to the list. Take the #1 name
off the list that you see
above,(to do so, put your cursor at the end
of the address of the FIRST
(#1)
address and click "backspace" until name and
address are gone.) Change
the
other numbers to one lower number (6
becomes 5, 5 becomes 4, etc...) by

putting your cursor on the right side of
each number and pushing
backspace
one time, then type the new number and add
YOUR Name as number 6 on the
list. (when you add your name it may be
double spaced... thats ok.)

STEP 3:. Now, post your amended article to
at least 200 newsgroups (I
think
there are close to 24,000 groups). All you
need is 200,
but remember, the more you post, the more
money you make! You won't get
very
much unless you post like crazy. :) This is
perfectly legal! If you have
any
doubts, refer to Title 18 Sec. 1302 & 1341
of the Postal lottery laws.
Keep
a copy of these steps for yourself and,
whenever you need money, you can

use it again, and again.

PLEASE REMEMBER that this program remains
successful because of the

Hi,

My IC-706 MKII after warm few minutes ,the FM RX lost sensitivity (in all bands), only strong signals, are receive. The problem is not in front end. If change to SSB, RTTY, AM or FM Wide is OK. The problem is only in NARROW FM and Normal FM, the TX is OK all time. I turn off, after 10 minutes I turn on again and is OK for + or - 5 minutes. Warm and the cycle repet again.

Thanks and best 73's

Source record: 69976
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

For Sale NEW 7036 (6BE6) tubes.
The boxes have the following information on them:
5960-00-074-4833 ELECTRON TUBE
1 EACH DLA900-82-G-0017-005
A-3/83 GE-7036 GENERAL ELECTRIC CO. Tubes are 5 to a sleeve.
The 7036 is electrically the same as the 6BE6 but it physically
taller. It is the same height as a 6AQ5 so tubes shields will
not fit from a 6BE6.
$10.00 per sleeve plus $3.20 priorty mail shipping U.S. locations only.
1-4 sleeves $3.20 priority mail shipping
4-8 sleeves $6.20 priority mail shipping
Thanks Larry WA9VRH

Source record: 69977

HI,
I am trying to hook up the ICOM UI7 fm/am board in my 725 and had a question.
Hooking up the J21 and J 22 wires were no problem but I am having trouble finding J5.
Is it marked. It shows in the diagram that it is on the control unit but there are nothing marking the j5 that I can see. Any help would be appreciated!!
Thanks

Cross-posted to: alt.ham-radio.dxing,alt.ham-radio.hf,alt.ham-radio.ssb,rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello everyone. I'm fairly new to HF and have a few questions about my antenna setup.

1. I have a G5RV Dipole up about 40' set up as an inverted "v", and use it on 10-80 meters with an external tuner. I just got a new rig with a built-in autotuner. My question is: will the autotuner handle the SWR of the G5RV as well as my manual tuner does, or will I be better off to continue using the manual tuner? II have heard that autotuners have a low tolerance to high SWR, and in some spots, the SWR on the G5RV is very high (3.1+).

2. How far should the ladderline and coax be from the leg of my tower? Do the "arms" of the antenna have to be in a V shape, or can I string them to fit my lot (If I do a V config., one arm hangs about 10' above my telephone line, and I don't want to do that).

3. I notice that on 40 and especially 80 meters, I get RFI on our TV's and phones as well as radios, but only on occasion. Would installing a good low-pass filter help to resolve this situation, or should I look into installing line and high-pass filters on the effected equipment?

Any information would be greatly appreciated!

Thanks
Adam

Dwight,

They may or may not. Since CAP went even more into USAF control and
NTIA, they are not supposed to be revealed by members. True, they are
in the public domain, it's just that Nat. HQ has forbidden members from
revealing them. Don't know why, but MARS members are told not to,
either.

For all you R-390A/URR receiver owners out there these tubes will
work for the internal SSB conversion. The web page with the information
is at http://www.eagle.ca/~harry/ba/r390a/r390assb.htm I did this mod
to an EAC R-390A/URR and it now performs very well when receiving SSB.
You only need one tube per R-390A/URR but if your like me you might be
able to use an entire sleeve on several R-390A's!

Hi all. I have four nice items on Ebay for sale. The T4X-C auction
end Saturday October 28 at about 7:00 PM California time, and the
others end on Sunday, October 29 from about 6:15 to 6:45 PM California
time.

Drake T4X-C: Excellent, L@@k
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=477911482

DX Engineering Speech Processor for Drake
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=478931596

Drake AC-4 Power Supply: Guaranteed!
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=478953755

Drake MS-4 Speaker: Excellent!
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=478969726

At the present time, the T4X-C is at $150, the DX-Eng is at $160, the
AC-4 is at $50, and the MS-4 is at $50.

All items are fully satisfaction guaranteed.

Thanks for your interest and good luck with your bidding. You can
email questions to NeilR@innermedia.com

Well, ain't that a load of crap. Okay, if they want to be that way, here are some of the frequencies that I know of...

122.9000 (AM) Air Training
123.1000 (AM) Air Search & Rescue
143.1000 (FM) F-1 (repeater in)
148.1500 (FM) F-1 (repeater out)
143.7500 (FM) F-2 (repeater in)
143.1250 (FM) F-2 (repeater out)
148.1375 (FM) Local Operations
149.5375 (FM) Air Operations
149.8950 (FM) Packet
121.6000 (AM) Training Beacon
148.1500 (FM) National Simplex

If you search around those frequencies, especially when something is going on (training, etc), you'll easily find other frequencies. You can also find others listed at various places on the internet.

Yes, I agree with what Walt here says...I have a G5RV and use it with an FT-990 which has an autotuner and it works fine, my ant has several spots with swr over 3:1 and the tuner handles it fine...just for your info...

2841. Yaesu VX-1 Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-28 19:25:20 UTC
From: Jim <headbanger@pobox.com>
Message-ID: <KKFK5.4136$qR3.1415471@homer.alpha.net>
Source record: 69919

Howdy.

My Yaesu VX-1 shuts itself off if you look at it crosseyed. If you pick it up, put it on your belt, or set it on its bottom, it clicks and shuts off.

I think I've got this narrowed down to the trapdoor arrangement of the battery compartment. THere's a little door that unlatches and swings down so you can stick the battery pack in it. I use the AA battery adapter that is the same size as the Li battery that comes with the unit.

It looks like there's some kind of an electrical contact on the hinge side of this trapdoor that has an intermittent connection. When that connection breaks, the radio is instantly off.

Anyone else have this problem -- and how did you fix it?

Thanks and 73

Jim

2842. F.S. VERY HEAVY DUTY 4-Element 10 Meter Beam

Newsgroup: rec.radio.amateur.equipment

Source record: 69920

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Greetings,

I will be getting a Heil Pro-Micro boomset/headphones to go with my IC-706mkIIG radio. The mic will have the HC-5 cartridge installed.

I am hoping someone has already used this combination and can answer some questions.

Is the Heil in-line mic amplifier (HMP) necessary or desirable for proper operation on the 706?

Any advice regarding the setting of the 706 mic gain or ALC?

Thanks and 73, TR

Well,

Like I said, they are in the public domain--always have been. But at USAF's direction, CAP members are ordered not to reveal them. I don't care if somebody finds them, and I doubt anyone else in CAP would either. It's just that we can't tell them ourselves. That's all.

BTW, at least one of the frequencies you posted is wrong. Hee! Hee!

While you're at it, why don't you post the HF frequencies? I can't.

Source record: 69930

Well, I may have solved this problem myself -- so, if anyone else has the problem and reads this, maybe it will help.

It seemed as if the intermittent connection was at the hinge end of the trapdoor arrangement, so I looked there, and found a little spoon-like extension of what would be the baseplate of the battery compartment. I took a little screwdriver and bent this structure up just a little, teeny bit, and that seems to have done the trick.

I have for sale some high quality GPS antennas. These cost $145.00 new. Please check out the 3 pictures for full information. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPSII,II+, III+ or any Garmin or other GPS unit that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. BNC to BNC jumpers up to 10 feet are also available for a small additional charge. Customers can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your interest!

2861. Need Service Manual - Alinco DR-110T

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-29 03:44:00 UTC
From: wacoradiodoc@aol.com
Message-ID: <20001028234400.29393.00000574@ng-cm1.aol.com>
Source record: 69939

I am looking for a service manual for the Alinco DR-110T, or if someone would just look up a part number from theirs for me, that is all I really need. If you are interested in doing the latter, I need the part number of a surface mount transistor or IC that is located next to C29 on the back of the front panel display board. I can't tell exactly what it is since the component is burned and the silkscreen component ID is smudged. It could be Q4, but don't hold me to it.

Thanks for any help you can provide. Just e-mail your response.

2862. FS/FT: Alinco DJ-S11T

I've got an Alinco DJ-S11T mini-HT for sale/trade. Its only a couple of months old and has seen very little use (mostly used for listening in while I was waiting for my ticket to arrive, have only transmitted with it once or twice).

You can get these new for around $75-80; I figure this one is worth $50; I'd like to sell it for that or trade for other radio equipment of equivalent value (make an offer, any offer.. I just dont use this at all now that I have a Yaesu FT-1500M here at the house).

>
>Thanks and best 73's
>

Some years ago I had a very similar problem with an Icom IC490 (70cm UHF)
set after a warm up time (20 minutes) complete loss of RX on FM switch to
SSB
or CW and RX is OK. FM TX ok.
at first the fault was thought to be "Lazy" Xtal in the FM IF that would
stop oscillating,
having changed the Xtal still had problem. So replaced FM IF IC (MC3359)
and problem was solved.
I do not know the workings of the IC706 but hope this will give you some
ideas where to look.

Adam, As you well know, opinions on antennas are a dime a dozen, everybody has his favorite. I tell you from first hand experience (been there, done that, got the T-shirt to prove it) throw that G5RV away and just put you up an inverted V or a flattop for 80 mtrs feed it with coax (rg8x is light and will handle up to 600 watts and is inexpensive) Your'e autotuner will love the Vor strait dipole, and I will bet you will hear better and receive better signal reports.

It doesn't take a PHD to run this reliable HT. This model has been in production since 1986 and is still going strong. Here are the current AES new prices on the offered equipment:

FT-23R HT - $219
Belt Clip - $7.95
DTMF Adapter - $48.95
Slim Speaker Mic - $30.94
Encoder Option - $24.95
DC adaptor - $ 31.95

Total $363.75

The HT and accessories are in good condition and has a new high watt (12V) battery.

Price: $165 (Less than half of new price) PLUS shipping costs from 29609 to your QTH. Has original manual, box, original wall charger.

Will consider trades.

Cheers,

AL

Hi Alex,

These radios are known for having the pots go out. I ordered them new
from Kenwood a couple years back. As I recall, one set could only be
ordered w/ a small attached PCB- not cheap.

As far as I know, I have heard no order to have us keep the freq's
"secret". Now my Wing's DC may have gotten it, but it certainly didn't
get down to the
squadron level! Plus, the comm regs (including freq's) are now online at
the National Tech Center...so I'm not to confident there was that order
:-) But hey, you know CAP...someone somewhere may have said...

> or a flattop for 80 mtrs feed it with coax ...

Opinions are one thing - physics is another. Your above configuration (with coax all the way to the dipole) is much worse advice than the G5RV on the bands where the G5RV performs well, i.e. 80m, 40m, 20m, 15m, and 12m. According to EZNEC, the 300 ohm series section transformer (matching section) lowers the 50 ohm SWR from 69:1 to 3.4:1 on 80m, from 64:1 to 4.3:1 on 40m, from 74:1 to 7.8:1 on 15m, and from 15:1 to 2.2:1 on 12m. Take a few minutes to calculate the relative losses in the coax due to SWR and you will see that the G5RV beats your antidotal advice all to heck. A good rule of thumb is not to run more than 50 ft of coax with an SWR higher than 10:1.

Greetings,

Get yourself a spray bottle and fill it with isopropyl rubbing alcohol. Remove the top and bottom covers and set tuner on it's side on top of a towel or rag (disposable). Douse the insides of the tuner with the alcohol so that it runs off. You may have to repeat this step to completely clean it out. You should see a yellowish-brown residue run off the pcb and other internal components. Let it air out and dry completely before replacing covers. Spray down the insides of the top and bottom cover as well. The Fabreeze trick isn't going to work unless you get all that tar/nicotine out first. Hope this helps.

I purchased one at a swap meet a couple months ago. It lacks CW (a big thing for me) and a CTCSS encoder for 10 mtr FM. Also, I wish the tuning resolution was 0.1 Hz instead of 1 Hz.

Aside from my complaints I am quite happy with it. I have had a lot of fun with 10 mtr mobile operation since I purchased it. It has a very sensitive receiver although it is subject to overload (not a problem for most users but I tried using it for sat work).

So, in summary I consider it worth the $90 I paid for it. You can get them on Ebay about any day for about the same price.

I'm looking for someone in the NW Washington area that goes by either Bob Christian, or John Sparks. He's a big guy, probably about 350+. He drives an older hightop camper style van. He's into radio gear, surveillance equipment, and firearms. I paid (cash/trade) him for a Yaesu VX5R, FT100D, and 2 Icom 735s. That was over a month ago, and noone has seen him since. He goes to a lot of the ham shows around the area. Just when you think you know someone? He'd been over to my house, visited with my wife, and everything. Then after he takes off, we find out that some things I'd seen in his van, he'd actually taken from ANOTHER mutual friend right before he took off. Anyhow, if anyone ever runs across him, PLEASE email me at gr8dayz@home.com a license plate number, ANYTHING would be great. Thanks.

Take Care, Ken.

I have had the chance to use a couple of these rigs and have found them to be pretty good little rigs. RX'er is pretty good and TX audio also good. They lack a lot of features that a couple of hundred dollars more would get you. If CW is your thing it is my understanding from reading the manual the there is not a built in keyer. Spend the little extra and get an FT 100 and have a top notch mobile rig. I have a 100 myself and couldn't be happier with mine. The 100 models can be found in some places for 899.00. The D model is a bit more.

Hello all
I have a IC 970 and I would like to know if some one use this TX and can help me
about some question :

1> Is it possible to modify the waiting delay when stoping on busy frequency during the scan ? (I would like it stop until 2second after the end
of the busy frequency, as other scanners for example)
2> It is possible to extand the UHF and SHF band ? It's ok for the 144 band but not
for others ones.

Thank you for your help and sorry for my too bad english ! (I'm French)

Hello again, and thanks for the advice so far. I wanted to make a few clarifications about my setup though. I intend to use my G5RV on ALL HF bands (10-80, including WARC). The antenna has 102' of "flat-top" to it, and about 30 feet or so of 400 ohm laddeline which is connected to a balun, after which there is about 70 feet or so of rg-8x. If precise measurements are needed, I can provide some. I am aware that certain lengths of coax can increase the SWR, but if memory serves, the length I have is one shown to be within an acceptable SWR range (although the SWR is still really high in spots).

My main concern was that my new rig's autotuner would fail if too great of an SWR is shown to it.

Thanks for your patience on this matter...I am slowly but surely learning the "HF ropes", as I am more experianced with VHF antenna systems.

>

So what you do about that is run PARALLEL dipoles, such that one of
them always presents a modest SWR on all bands of interest. 80,40, and
twenty meter dipoles paralleled on a single coax run do a quite good job
of covering the HF bands here.

FYI, "rotor wire" is somewhat special cable that has, in the case of the 8-conductor cable two wires that are heavier gauge than the other six wires. These heavy wires are for the motor connection and the others are for control connections.

It is false economy to skimp on the cable to a rotator, especially if the rotator is going to be heavily loaded with a big antenna, possibility of ice, etc. Better to spend a few extra $$$ here than elsewhere if you want to rotator to do its job and to keep you on the ground instead of up there working on it.

The wire sizes should be determined by the specific rotator you are using, its antenna load and the length of the cable to get from the control unit to the rotator.

"Phone wire" is probably OK for control connections but altogether too small for the motor connections. You can make your own cable, if you want to, using something like 6-conductor computer or telephone cable wire for the control leads and a two-wire cable of heavier (much heavier!) gauge for the motor leads. It is just a little messier to install than the neat all-in-one cable.

You can use any wire that is big enough. You may want to make sure that it is rated for outside use as the sun and rain will have bad effects on some insulation over a period of time. Don't recall without looking if the ham iv takes 2 or 3 large wires for the motor, 18 guage recommmended and the others are # 22 for runs up to about 100 feet. The voltage is low enough that you don't have to worry about that for the insulation.

But for crissake don't try to trim the individual flattops for low swr on their
own bands because they all interact and trimming one will make some other
dipole too long/short etc and you'll drive yourself nuts. BTW, don't try using
what cable companies and telcos use for 'lashing wire' to make antennas out of,
the manufacturers build a little resistance into the material in them and you
just cannot get the swr down. (drove myself nuts trying to once).

Are you talking about "143.1000" for the F-1 repeater in? That was a typo - it should have read 143.9000.

> While you're at it, why don't you post the HF frequencies? I can't.

Nope, don't have the CAP HF frequencies here at home. I'm sure they're available somewhere at the station, but all I copied to listen to here at the house were the VHF frequencies.

The standard G5RV does not work well on 30m, 17m, and 10m. However,
slight variations have a big effect on 10m. If you really want an
all HF band antenna, take a look at mine on my web page. Also follow
the G5RV web page selection to find out all about the G5RV.

You guys sound like you have the same problems we have in the Coast Guard Auxiliary - a pile of constantly changing rules and regulations, with the endless confusion often associated with that.

Everybody in the Auxiliary, and I mean everybody, seems to think that its their job to come up with a new rule or regulation. So, when we are not getting something from the gold side (the active duty Coast Guard side), we're getting something from somewhere up the Auxiliary's chain of command.

Source record: 69855

Hello, all.

I just received a yaesu ft51r dual band HT and it seems to have a few problems.

My uncle played with it before giving it to me and now I find that I can only transmit in the 430-440 band only. Nothing in the 440-450 range.
Also, on 2m it only allows me to transmit from 144 to 146.....

Sounds like a non US type of band plan. Of course, he bought it here new in the US and was working for many years.
It has been modified but i do not know which mod.

Anyone help with how to reset this for US band plans?

How about anyone with just the keyboard commands to reset the machine with a hard reset?
I obviously do not have a manual.

Any other help would be grand for this real dual band HT.

thanks

Ten-Tec dudes, please help...

I picked up a sad ol' Ten-Tec Triton IV with the matching
accessory digital frequency display at a swap meet this
past weekend. The rig is allegedly working, but I doubt
that. Here's what I need so far:
- complete manual for both pieces (photocopies will do)
- Triton IV front panel in nice condition
- three knobs to fit D-shaped shafts (without setscrew)
- source for dial string "bungee cord" material
- any advice/tips/tricks pertaining to these rigs

Dave,
If this is anything like my ft-50, get the manual from Yaesu, you'll need it to keep track of everything it can do. They quoted me $11 total for mine. One other thing you can try is an internet search, I found out how to operate about 60% of mine before I got the manual.
read the reviews and the mod pages.

I cut them for center band, separate them as much as possible,
avoiding close parallel installations and tune them with a tuner. It
has always worked for me.

That "carrier wire" is stainlss steel of high strength, and I never
pass an opportunity to grab it when available. I don't use it for
antennas but there are many other excellent uses for it.

IMO Nothing beats Copperweld for antennas. A few years ago I boubht a
spool of some new stuff called "Silky Smooth" or somethbing like that
from The Wireman. It was many small strands of plated steel and looked
like a good thing, and I repaced all my old copperweld with it. Turns
out it was NOT a good thing at all. I climbed the tower last week and in
looking things over and I see that ALL the entire length of each wire
element on all my antennas are now RUSTING! The plating is coming off
the small strands and over the entire length of every wire element small
points of rust are appearing. I'll have to replace every element on
every wire antenna, 160, 80, 40 and 30 meter dipoles. So much for
another "technological" advance! It's copperweld exclusively for me from
here on.

2937. Kenwood D7-A Upgrade Scam

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-30 18:08:32 UTC
From: bob@bnbcomp.net
Message-ID: <8tkdep$t82$1@nnrp1.deja.com>
Source record: 69865

I recently visited Pacificon, where I learned to my shock and surprise that the "Upgrade" to the D7-A which turns it in to the A(G) is a purely flash bios upgrade, for which Kenwood wishes to charge $60 plus S&H both ways.

When I wrote to them pointing out that Motorola, for one, upgrades their radios for free, and that the practice is universal (and demanded) in the computer business, I received a rather incoherent reply stating that 1)it wasn't a bug fix (not true - it fixes several bugs in parsing the GPS sentences) 2) that it was a "labor charge".

Well, I have no problem with those unable to apply a flash update on their own being charged labor. It is pretty clear, though, that this is an attempt to get another chunk of $$ out of me for a radio that is still under Warantee. Kenwood is punishing me for being an early adopter of their technology, as I could have waited and gotten the A(G) for the same price as I paid for the A.

If this strikes you as unfair and counter to the spirit of amateur radio, please email Kenwood (CUyeda@kenwood.com) and express your displeasure.

Anyone have any idea what price range the new Kenwood TS-2000 will likely be in? Are we talking IC-756Pro, or IC-718? :-)

Hi Bob, well that's not all that Kenwood has done to us hams buddy...I'm just one of the many who were stung by their mistake of using the wrong material to stabilize the components in the VCO on their TS-440 HF rig. This compound turned black (from cream coloured) and gets very corrosive, it eats the leads off the components in the VCO box (and there's lots of tiny components in there). You'd think that they'd at least pay for the repair that their mistake caused but they won't. I think I'll stick with Yaesu...

If it rained silver dollars, you'd probably bitch about having to bend over and pick them up.

Last time I checked "free upgrades" are not "universal practice" in computers or ANY market.

Perhaps all other equipment manufacturers are punishing you by not even SELLING HTs with built-in TNCs?

Perform your own flash bios update and forego the $60 charge. Oh, yeah, you have to WRITE the update yourself.

Sheesh! You bought a radio, not a lifetime of freeloading. I like mine, and gladly got the upgrade. It's a wonderful piece of engineering.

2944. Kenwood TS-450/690 Service Manual

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-30 23:45:39 UTC
From: John Reed <jreed@NOSPAM.thor.atl.ga.us>
Message-ID: <svs21i3qnoodf9@corp.supernews.com>
Source record: 69872

Does anyone here own the Service Manual for a Kenwood TS-450/690?

This past weekend, while mountain-topping in North Georgia, the radio, which was propped against the passenger seat, bounced, and slipped off the edge of the seat, causing the two small "power" and "mic" pots to break off. The metal post of the "pot" broke in two - but the plastic knobs themselves are fine.

Can someone with the Service Manual locate these pot and supply me with the kenwood part number so that I may order one (two) ?

Thanks - please reply direct to email, removing "NOSPAM" from the address.

John

> If it rained silver dollars, you'd probably bitch about having to bend over and pick them up.

Note, Alice, that these silver dollars are mine. I paid $439 for the radio from HRO, plus tax. While still well within waranty, the TH-D7A (G) comes out, same radio with changes to the flash bios. I can buy the TH-D7A(G) for $409. Kenwood will not give anyone the upgrade, they want the $60. So if I reaaallly want the upgrade I'm supposed to pay a total of around $519 for a $409 radio. I think not.

>
> Last time I checked "free upgrades" are not "universal practice" in computers
> or ANY market.

Free "flash bios" updates are pretty standard - I agree that hardware based upgrades are not usually free. Motorola regularly gives out free upgrades for their flash based radios. I get free updates to motherboards, video cards, etc. all the time. The point is not to punish the poor sap that bought the product too early, since he/she generated the interest and income which gave you the incentive to improve the software.

> Perhaps all other equipment manufacturers are punishing you by not even SELLING
> HTs with built-in TNCs?

I didn't buy this from another manufacturer; I bought it from Kenwood. I guess that means I should get screwed, huh?

> Perform your own flash bios update and forego the $60 charge. Oh, yeah, you

Hi Dean!
Don't overlook Ten Tec for parts and info. They are famous for their
support of their old rigs. I'm not sure they would have a front panel, (but
they might since they are made in house) but I bet they will have a manual,
probably the knobs (also made in house) and dial cord material. Call Paul
at (865)428-0364 and I bet he can fix you up.
73
Jim KC4EE
PS All parts I have obtained from them have been very resonable in price.

I was told under $ 2000 street price in USA Dollars from several people including a Rep from Kenwood. This is not in stone though.
It all depends on how you buy the radio. There is a black box (no display) and can be used like a Ten Tec Pegasus or you can buy a optional remote head and cable and use it mobile, or you can buy it witht he base face place already attached for base use.Very versatile radio. It is really just a box with a lot of stuff put in it if you think about it. The Subreceiver is simply a Dual Band one at a time FM radio like the TMg 707. they added AF dsp to this part.
The tuner appears to be a TS-570S 160- 6 mtr tuner (3 to one max). The main receiver is similar design to the TS870 (if DSP) but also has ALL the bands on it in all modes.
Only thing left out on this radio is 70 MHZ for the BRitish and 220 MHZ for the Americans. AND a power Supply.
I think it even has a TNC and the Kenwood SKY Command built in.

Let me share with you how the "Flash Bios" are updated.

First the radio has to be disassembled then leads have to be
soldered to the RAM chip. Then the software is loaded the
leads desoldered and the radio reassembled. I had mine done
at Dayton and watched the process.

What you are getting charged for is the labor involved it ain't
exactly like the plug upgrades on a Motorola.

2956. Re: Civil Air Patrol freq's

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-31 01:39:46 UTC
From: Royce L Fontenot <climate@attglobal.net>
Message-ID: <39FE22E2.FB32B9DB@attglobal.net>
Source record: 69884

Well, for CAP, it was a major switch. We had been under the FCC for many many years, and then we were switched to NTIA, which has an entirely different set of guidelines, including a new set of tech standards. So there has been a great deal of confusion in the comms area, not unlike the recent FCC restructuring for Amateur Radio. Also, different regions/wings have different policies (I'm sure the CGAux is the same between districts/groups), so one wing may have one policy when another doesn't. I still don't see why our freq's would be "secret", especally since they are available at the CAP National Tech Center website which has the following disclaimer:

"Information presented on these pages is considered public information and may be distributed or copied, unless restricted by access. Information that is restricted by access is considered Protected from Disclosure. Any person who intentionally Distributes, Reproduces, or Discloses its content is
subject to the penalties set forth in 18 USC Sec. 2511 and/or related State and Federal Laws. "

Personally, I'm not wild about some of people (read: media) listening to everything we do on an actual mission, but it's an open freq and the freq's are posted on a open, unclassified system. Not much I can do there! :-)

I'm still curious though, it may be the order was issued and not passed along to all...so thanks Jerry, I'll do some asking around to see if so!

Yep, I remember being told that when I was in AF mars. Well, actually, I wasn't told that, but it was in the training manuals. We weren't supposed to give the frequencies out, and that was in the mid 80's. I'm not in mars now. The local houston VHF CAP frequencies I think I found in a "text" scanner freq list or something like that. So I guess at least here, those were fairly public. Don't know about now though. MK

Well , the first crew for the ISS is scheduled to launch tomorrow (Tues..) and dock Thursday . I know the call signs but what about the frequency . However I am sure amateur operations will not begin for some time though . I don't guess the freq. has been determined yet (or has it) . Does anyone know why they haven't decided on one yet or when they might get around to deciding on what the freq. will be . Also I heard the Russians plan on sending a crew to MIR in January . Don't know how much truth is to that though . But would like to see it happen . It would probably be another last chance for a QSO .

I was bidding on a Heil Micro-Pro at ebay. The Micro-Pro requires a 706 adapter for use. Depending on the user, a heil pre-amp may or may not be needed for best sound.

The Micro-Pro is not the same as the promotional boomset that is being given away with the current 706mkIIG radios. I don't know what element is in the promotional boomset, but my understanding is it is specifically made for the 706 radio, so there should be no compatibilty concerns.

Royce,

The directive to not disclose CAP freqs. came from the NC Wing DOK. I didn't argue with it. Dwight is right, there are a lot of confusing things that occur because of changes. I mean, I don't care whether they are "known" or not. I was just doing what I had been told to do.

BTW, I do think it IS a good idea not to divulge frequencies due to the reasons you stated. There are times when the media can get in the way, present premature info, and generally mess things up. This is why we often use the HF freqs up near 25-26 MHZ for certain local missions. With the higher power, and SSB, they are quite effective. AND scanners, at least the usual ones, can't copy SSB making for somewhat effective scrambling. Which thwarts the media and the ambulance chasers.

We get that all the time. In fact, since much of our communications with the public is on open marine frequencies, we occasionally have spectatators and the press showing up at incident locations. In fact, if the "story" is big, or drawn out over a period of time, we have to waste time with crowd control - which is something one would think would not be necessary on water.

Sorry I thought you didn't understand some effort was involved.
Apparently you just want to whine, send me an address I get some
cheese out your way.

BTW they didn't plan to mod it going in they responded to requests
to make the rig more than it was originally intended to be. Most
companies charge an hour minimum no matter what the actual time
$60 doesn't seem so bad. Do you work for free? I know I don't.

Perhaps if all you petty whiners make enough noise Kenwood won't
bother responding to suggestions for improvements and you'll get
your wish-- no charges.

Source record: 69749

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Would anyone care to report their experiences with any antenna noise cancelling devices (Eg., the MFJ-1025 or the ANC-4, now produced by TimeWave)? I found a 1996 QST review of the ANC-4 but little in the way of actual operator comments on either of these devices recently. I live in a fairly high noise urban setting and am looking for solutions. Thank you.

Band
> one at a time FM radio like the TMg 707. they added AF dsp to this part.

Hmmmmmm. Hopefully the Subreceiver will be able to do transmit on one band
while receiving on the other, as the D700A can.... That makes Satellite
work on the FM birds less painful, as you can hear yourself coming back
down, and if you're making it.

I assume you'd be able to buy it with one control configuration (e.g.,
mobile), and add another mode later on (e.g., base)......

Then there are the wierdos that gripe about other gear that's not
upgradeable at all.

Let's all pass along your gripe to Kenwood and ensure that they "force" all
of us to buy brand new equipment everytime there is an advance - such as the
APRS enhanced command syntax that partly instigated this upgrade. You COULD
have been required to purchase the "TH-D8A" to get these new features.

By the way, you paid too much for the radio to start with! :-)

I really get a kick out of people who want to throw their two cents in.
Maybe if you would mind your own business you wouldn't let things get to
you. Obviously this bothers you.....and i'm glad.

hello this is KD7HDA
I am setting up a new shack with my son, KD7IAU and need an opinion. We have a 20A Astron P/S that will be in a location separate from most of the equipment and I am looking for info on the best way connect and disconnect from 12v power. I figure running 10g wire to the shack (less than 5 feet) but the question arises after that.....

Is it best to have a junction box with connectors and a meter?
or a strip with alligator clips and a meter somewhere inline?

am not sure, and I am certain there is an elmer site somewhere that shows this. Could someone tell me where?
thanks
73,
Michael

>

Flame ignored

> BTW they didn't plan to mod it going in

Why not? You have a flash bios and you make no plans to reload the program or add an upgrade, especially correct original errors. The company that does this leaves themselves open for the competition to take up the ball and leave them in their dust. As I said before I will be taking this kind of attitude into account when purchasing new radios.
I bought a Yaesu ft-50rd ht (first radio) and now realize that it doesn't do everything the manual says it will. This kind of stuff doesn't breed confidence.

> they responded to requests
> to make the rig more than it was originally intended to be.

I didn't say performance upgrades should be free, but original mistakes should be corrected free and the upgrade ought to be spectacular for $60

> Most
> companies charge an hour minimum no matter what the actual time
> $60 doesn't seem so bad. Do you work for free? I know I don't.

I don't charge a minimum of an hour for 15 mins. work because that would be dishonest.

>
>
> Perhaps if all you petty whiners make enough noise Kenwood won't
> bother responding to suggestions for improvements and you'll get
> your wish-- no charges.

Or maybe companies look at discussions like this and wonder if this wasn't the best idea and form a different game plan. If that involves not releasing upgrades or repairing bugs to a radio because it is not worth it to them so be it, but they shouldn't complain if some other company's game plan is to be more aggressive with their customer service and buyers start buying other company's product.
BTW you don't need to use name calling to get your point across.

I just got the radioshack flyer in the mail and it has the ALINCO DX-70TD for $
599
by www.Radioshack.com. The radio looks just like the original Alinco DX70T
but radio shack added a "T' to call it a DX-70TD. Is this the same radio in
which you had to move slide switches to change subaudible tones ? Most moder
radios from the last 20 years allow you to changet the subaudible tones from
the front panel. Did Alinco fix this on this model ?/ What is the scoop> the
Guy at Radio shack that I spoke with didn't even know what amateur radio was .
Thanks, TED

First, Gerald, let me thank you for your thoughtful answer to my original post. Let me just raise a couple of points in response.

In article <39fe20cf.79941615@nntp.mindspring.com>, kk5yyNOSPAM@arrl.net wrote:
>
> Let me share with you how the "Flash Bios" are updated.
>
> First the radio has to be disassembled then leads have to be
> soldered to the RAM chip. Then the software is loaded the
> leads desoldered and the radio reassembled. I had mine done
> at Dayton and watched the process.

So? I've had mine apart to do the MARS mod, and am certainly capable of soldering a wire to a pin on an IC. The point is I want to do it myself.

As I said in my original post, 60 bucks is probably fair for someone that wants to mail the radio off and have some unknown tech fooling with it. If the clock started again on the waranty, it would be great, but of course it doesn't.

>
> What you are getting charged for is the labor involved it ain't
> exactly like the plug upgrades on a Motorola.

There is split opinion from Kenwood on this. One guy claims it is only labor, but another Kenwood employee told me that the charge was for the upgrade, and how long it took was immaterial.

Making this a labor charge but not allowing anyone but Kenwood to do the labor would be illegal in the US.

A couple of other questions raised further down this thread:

1) aren't I lucky that Kenwood didn't make me buy the TH-D8A and not upgrade me at all?
No, not lucky at all. I can get $300+ for the radio I have, buy a new one and get a whole new waranty for about the same price. In essence, I am being forced to buy a new radio.

2) gee, how nice that they took suggestions about what the radio should have been in the first place and then implemented them, charging the people who made the suggestions to give them a simple upgrade. NOT! I exclude, of course, those who cannot work on their on gear or do not want to.

3) you are right.. HRO charged me too much for the radio.

Best 73's
Bob

The "D" means discontinued. The radio is the original DX-70T that only had 10W output on 6M. RadioShack bought all the remaining stock from Alinco to liquidate thru their .com & special order phone#'s, like they did a couple of years ago with the discontinued Alinco DJ-190. The "T" (D) is no longer available or orderable thru regular Alinco dealers, just the TH (100W 6-160meters) version.

I have a Yaesu 767GX and just bought a 70cm module for it. I shorted the internal jumper pair so it operates from 440-449.99MHz but the display still reads 430-439.99. Anyone know if there is a way to change this so it read accurately? Thanks.

Rick, KA1HVH

Hi Steve!
Thanks for your note....the new HS-706 will be available from our dealers or directly from us in about 6 weeks. It is THE definitive answer for the 706...trust me! It will be placed on our web site in the next 7 - 10 days.....Stay tuned!

Thanks for your interest and support.

Michael,

I have a sim situation. I power my shack off a 35 amp Astron located on the floor below my shack. I ran #8 wire fused on both leads and ran it directly to my HF rig. I then ran a #12 cable fused on both legs from the supply to a MFJ, metered outlet strip that I runs all of my other 12volt gear.

I have never had any trouble. My total distance from the supply to the shack is about 12 feet.

Hope this helps.

Correction. I have fumble fingers! Should read 6 AA batteries for the 9 volts
required for memory backup.

Sorry for the confusion.

Hi all,

My name is Alex Wiecek VE3GOP, and I'm a member of the Polish Amateur Radio Club VE3XPL here in Toronto. We are currently trying to establish a listing of all polish speaking Canadian Ham Radio Operators living either in Canada or abroad. The purpose of this activity is to present a petition to the Industry Canada to obtain a temporary special event callsign to commemorate the 75th aniversary of the Polish Ham Radio Society in Poland. We tried contacting the IC office in Ottawa but they don't seem to be responsive and as such, we have decided that the next approach would be to present them with as many e-mail petitions as possible to make our voices heard.

We need your help, if you are a polish speaking amateur or know someone who is, we would like to hear from you.

Please contact me at alexwiecek@home.com, and if you'd like to learn more about our club, please visit http://web.ionsys.com/~magnum/ve3xpl/index.htm

your help would be greatly appreciated.

Thank you.

The boomset that I purchased and enqiured about the pre-amp, was the Pro-micro with a HC-5 element. This is not the same as the promotional model being offered with the new 706s. I'll be curious to see how the new HS-706 stacks up against the Pro-Micro.

I have an ANC-4 for heavy duty line noise and it works fine for
that. Since I bought it I have found a better solution (the power
company came and trimmed the trees and fixed the poles) so it
is out on loan to a buddy next to an engineering shop. He finds
it invaluable.

Dwight, there is a large Polish community in Canada. The family of my tech in my Canadian office came from Warsaw and still speaks Polish at home (he's 2nd generation). Very strong sentiment and connections with the mother country. One way to show a little solidarity (pun intended) with the old home country.

Andrew

(PS. my brother has photos of several early Debonairs but not yours. I've asked if he comes across any of them to email them to me so I can send them on to you. Might be interesting to see if any are sister ships)

Over ten years ago I purchased call sign decals from K2RPZ Print in Rocky Point, L.I. I used them to affix my call sign to postcards and photographs as QSL cards.I would like to do so again but cannot locate the source. Can anyone tell me where I might obtain these decals. Thank you.

======
Hi Jim -- just an idea. You can print your own on Avery products. They make
them in many colors -- including transparent. I affixed them to a 35mm photo I
took and it becomes a QSL card. For a sample of transparent use see URL:
http://www.qrz.com/database?callsign=ac6v
The AC6V is a transparent label printed on my trusty HP 812C printer. The
reverse side is a large Avery label with the QSl info printed on it.

And Mail box etc can make decals for you as well

Can some Collins geru on the 30S1 amp tell me what temp. the air sensor is set at. This is the unit on the swivel over the output tube.

I know the tube specs. Also have the manuals for the unit. The manual says amp good for 40 deg. C air (ambient air). I can not find a max. temp for the exhaust air. The manual says don't touch the sensor, TOO late someone else has already done this.

Any info on a replacement part.

thanks

I wonder why they take such high voltage and current?...most memory backup batteries are little 3 volt lithium cells...perhaps those are rather old units?....

Being an eternal cheapskate I am looking for an inexpensive headset/boom mic for an HF radio. I was wondering if the computer headsets with boom mics have sufficient gain to work for this. What sufficient freq response? I figured I could wire up a 1/8" jack to a 5 pin DIN and have an outboard ptt switch (or use VOX).

Thanks for any input!

Source record: 69728
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

For sale or trade:

Six (6) Radio Shack BTX-121 2-channel VHF high-band handheld transceivers. RF power output is 1W or 100 mW (switchable). All six are in working condition, with crystals installed for 151.625 MHz and 154.600 MHz. I charged up all of the battery packs last week, and they all took a full charge. Four of the radios have brand new rubber antennas, the other two have old but good rubber antennas. Six wall chargers are included (some of them are not the original ones, but they all work and charge the radios just fine). Cosmetically, the radios show some wear, but none are what I'd consider "beat up". One radio is missing the little rubber plug that covers the spkr/mic jack. One copy of the operator's manual is included (a text version downloaded from Radio Shack's web site).

The price is $300.00 for all six, or I'll sell them in pairs for $100.00 per pair. These sold for $149.95 each when new, and the extra crystals were $25.00 per radio. Buyer is responsible for shipping charges. I *may* still have some 154.570 MHz crystals that I pulled from some of the radios, and if I do, I'll include them at no extra charge.

I will also trade. I'm looking for various ham gear, including:
- Drake T-4XC transmitter with AC-4 p/s
- Drake 2B receiver with 2BQ spkr/QMult
- Antenna tuner with roller coil, balun, and bypass switch, must be capable of handling at least 1 KW of power
- Ten-Tec TX-100 xmtr, model 200 vfo, and RX-315 rcvr

We used to use these radios at car shows for the show staff to communicate with each other, but we're no longer doing shows so we no longer need the radios.

By the way: the upcoming MURS (the new VHF CB service) will have 154.600 MHz as one of its channels, so these should be considered MURS-ready!

Thanks and 73,
Dean, K5DH

3052. Cheap 746, $895

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-01 20:19:08 UTC
From: Hamtrader <hamtrader@hamtrader.cc>
Message-ID: <3A007ABC.EFF6483A@hamtrader.cc>
Source record: 69729

I have a nice Icom 746 HF/6/2meter rig
for sale...It has a slight problem that
does not affect the operation of the rig.
The Display is only about 75% bright.
Everything else works 100%. I guess
the florescent bulb behind the display
needs replacing and I am not a Radio
Tech., so I have decided to sell it at
a reduced price instead of repairing it
and selling it for $1050.00 like most of
the others are going for.
I have checked with Icom and the bulb
cost $25.00. If there is anyone wanting
a good deal on a 746 that can either put
up with the 75% bright display or knows
how to fix the problem, come on down and
buy this one...
Works great.
Thanks and 73

HOW TO TURN SIX DOLLARS INTO SIX THOUSAND DOLLARS: : READING THIS =
COULD CHANGE YOUR LIFE! IT DOES WORK! : I found this on a bulletin board =
and decided to try it. A little : while back, I was browsing through =
newsgroups, just like you are now, : and came across an article similar =
to this that said you could make : thousands of dollars within weeks =
with only an initial investment of : $6.00! So I thought, "Yeah right, =
this must be a scam", but : like most of us, I was curious, so I kept =
reading. Anyway, it said : that you send $1.00 to each of the 6 names =
and address stated in the : article. You then place your own name and =
address in the bottom of : the list at #6, and post the article in at =
least 200 newsgroups. : (There are thousands) No catch, that was it. So =
after thinking it : over, and talking to a few people first, I thought =
about trying it. I : figured: "what have I got to lose except 6 stamps =
and $6.00, : right?" Then I invested the measly $6.00. Well GUESS =
WHAT!?... : within 7 days, I started getting money in the mail! I was =
shocked! I : figured it would end soon, but the money just kept coming =
in. In my : first week, I made about $25.00. By the end of the second =
week I had : made a total of over $1,000.00! In the third week I had =
over : $10,000.00 and it's still growing. This is now my fourth week and =
I : have made a total of just over $42,000.00 and it's still coming in : =
rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more : =
than that on the lottery!! Let me tell you how this works and most : =
importantly, WHY it works... Also, make sure you print a copy of this : =
article NOW, so you can get the information off of it as you need it. : =
I promise you that if you follow the directions exactly, that you : will =
start making more money than you thought possible by doing : something =
so easy! : Suggestion: Read this entire message carefully! (print it out =
or : download it.) Follow the simple directions and watch the money come =
: in! : It's easy. It's legal. And, your investment is only $6.00 (Plus =
: postage) : IMPORTANT: This is not a rip-off; it is not indecent; it is =
not : illegal; and it is 99% no risk - it really works! : If all of the =
following instructions are adhered to, you will receive : extraordinary =
dividends. : PLEASE NOTE: : Please follow these directions EXACTLY, and =
$50,000 or more can be : yours in 20 to 60 days. This program remains =
successful because of : the honesty and integrity of the participants. =
```

Please continue its : success by carefully adhering to the instructions. =
: You will now become part of the Mail Order business. In this business =
: your product is not solid and tangible, it's a service. You are in : =
the business of developing Mailing Lists. Many large corporations are : =
happy to pay big bucks for quality lists. However, the money made : from =
the mailing lists is secondary to the income which is made from : people =
like you and me asking to be included in that list. : Here are the 4 =
easy steps to success: : STEP 1: Get 6 separate pieces of paper and =
write the following on : each piece of paper "PLEASE PUT ME ON YOUR =
MAILING LIST." Now : get 6 US $1.00 bills and place ONE inside EACH of =
the 6 pieces of : paper so the bill will not be seen through the =
envelope (to prevent : thievery). Next, place one paper in each of the 6 =
envelopes and seal : them. You should now have 6 sealed envelopes, each =
with a piece of : paper stating the above phrase, your name and address, =
and a $1.00 : bill. What you are doing is creating a service. THIS IS =
ABSOLUTELY : LEGAL! You are requesting a legitimate service and you are =
paying for : it! Like most of us I was a little skeptical and a little =
worried : about the legal aspects of it all. So I checked it out with =
the U.S. : Post Office (1-800-725-2161) and they confirmed that it is =
indeed : legal. Mail the 6 envelopes to the following addresses: : #1)=20

E. Benford : 6656 Mableton Pwky APT.#D4 : Mableton, GA.. 30126 : =
#2) Kim Williams : 3334 Kingsland Avenue : Bronx, NY 10469 : #3) Yury =
Konev : 823 Pavonia Avenue : Jersey City, NJ 07306 : #4 A. Campbell : =
P.O. Box 432 : Nellysford, VA.. 22958 : #5B. Page. PO Box 5024 Kendall =
Park NJ 08824 #6 Ewald Kerkhoff site 41 comp. 30 Penticton, B.C. V2A =
7K8 Canada : STEP 2: Now take the #1 name off the list that you see =
above, move : the other names up (6 becomes 5, 5 becomes 4, etc...) and =
add YOUR : Name as number 6 on the list. : STEP 3: Change anything you =
need to, but try to keep this article as : close to original as =
possible. Now, post your amended article to at : least 200 newsgroups. =
(I think there are close to 24,000 groups) All : you need is 200, but =
remember, the more you post, the more money you : make! You won't get =
very much unless you post like crazy. :) : This is perfectly legal! If =
you have any doubts, refer to Title 18 : Sec. 1302 & 1341 of the Postal =
lottery laws. : Keep a copy of these steps for yourself and, whenever =
you need money, : you can use it again, and again. : PLEASE REMEMBER =
that this program remains successful because of the : honesty and =
integrity of the participants and by their carefully : adhering to the =
directions. Look at it this way. If you are of : integrity, the program =
will continue and the money that so many : others have received will =
come your way. : NOTE: You may want to retain every name and address =
sent to you, : either on a computer or hard copy and keep the notes =
people send you. : This VERIFIES that you are truly providing a service. =
(Also, it might : be a good idea to wrap the $1 bill in dark paper to =
reduce the risk : of mail theft.) : So, as each post is downloaded and =
the directions carefully followed, : six members will be reimbursed for =
their participation as a List : Developer with one dollar each. Your =
name will move up the list : geometrically so that when your name =
reaches the #1 position you will : be receiving thousands of dollars in =

CASH!!! What an opportunity for : only $6.00 ($1.00 for each of the =
first six people listed above) Send : it now, add your own name to the =
list and you're in business! : ---DIRECTIONS ----- FOR HOW TO POST TO =
NEWSGROUPS---------- : Step 1) You do not need to re-type this entire =
letter to do your own : posting. Simply put your cursor at the beginning =
of this letter and : drag your cursor to the bottom of this document, =
and select 'copy' : from the edit menu. This will copy the entire letter =
into the : computer's memory. : Step 2) Open a blank 'notepad' file and =
place your cursor at the top : of the blank page. From the 'edit' menu =
select 'paste'. This will : paste a copy of the letter into notepad so =
that you can add your name : to the list. Step 3) Save your new notepad =
file as a .txt file. If : you want to do your postings in different =
settings, you'll always : have this file to go back to. : Step 4) Use =
Netscape or Internet explorer and try searching for : various newsgroups =
(on-line forums, message boards, chat sites, : discussions.) : Step 5) =
Visit these message boards and post this article as a new : message by =
highlighting the text of this letter and selecting paste : from the edit =
menu. Fill in the Subject, this will be the header that : everyone sees =
as they scroll through the list of postings in a : particular group, =
click the post message button. You're done with : your first one! =
Congratulations...THAT'S IT! All you have to do is : jump to different =
newsgroups and post away, after you get the hang of : it, it will take =
about 30 seconds for each newsgroup! **REMEMBER, THE : MORE NEWSGROUPS =
YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT : YOU HAVE TO POST A =
MINIMUM OF 200** That's it! You will begin receiving : money from around =
the world within days! You may eventually want to : rent a P.O.Box due =
to the large amount of mail you will receive. If : you wish to stay =
anonymous, you can invent a name to use, as long as : the postman will =
deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE : CORRECT.** : Now, : =
each of the 5 persons who just sent me $1.00 make the MINIMUM 200 : =
postings, each with my name at #5 and only 5 persons respond to each : =
of the original 5, that is another $25.00 for me, now those 25 each : =
make 200 MINIMUM posts with my name at #4 and only 5 replies each, I : =
will bring in an additional $125.00! Now, those 125 persons turn : =
around and post the MINIMUM 200 with my name at #3 and only receive 5 : =
replies each, I will make an additional $625.00! OK, now here is the : =
fun part, each of those 625 persons post a MINIMUM 200 letters with : my =
name at #2 and they each only receive 5 replies, that just made me : =
$3,125.00!!! Those 3,125 persons will all deliver this message to 200 : =
newsgroups with my name at #1 and if still 5 persons per 200 : =
newsgroups react I will receive $15,625,00! With an original : =
investment of only $6.00! AMAZING! When your name is no longer on the : =
list, you just take the latest posting in the newsgroups, and send : out =
another $6.00 to names on the list, putting your name at number 6 : =
again. And start posting again. The thing to remember is: do you : =
realize that thousands of people all over the world are joining the : =
internet and reading these articles everyday?, JUST LIKE YOU are : now!! =
So, can you afford $6.00 and see if it really works?? I think : so... =
People have said, "what if the plan is played out and no : one sends you =
the money? So what! What are the chances of that : happening when there =

are tons of new honest users and new honest : people who are joining the =
internet and newsgroups everyday and are : willing to give it a try? =
Estimates are at 20,000 to 50,000 new : users, every day, with thousands =
of those joining the actual : internet. Remember, play FAIRLY and =
HONESTLY and this will really : work.=20

us, I was curious, so I kept reading. Anyway, it said : that you =
send=20
$1.00 to each of the 6 names and address stated in the : article. =
You then=20
place your own name and address in the bottom of : the list at #6, =
and=20
post the article in at least 200 newsgroups. : (There are =
thousands) No=20
catch, that was it. So after thinking it : over, and talking to a =
few=20
people first, I thought about trying it. I : figured: "what have I =
got to=20
lose except 6 stamps and $6.00, : right?" Then I invested the =
measly=20
$6.00. Well GUESS WHAT!?... : within 7 days, I started getting =
money in=20
the mail! I was shocked! I : figured it would end soon, but the =

money just=20
kept coming in. In my : first week, I made about $25.00. By the =
end of the=20
second week I had : made a total of over $1,000.00! In the third =
week I=20
had over : $10,000.00 and it's still growing. This is now my =
fourth week=20
and I : have made a total of just over $42,000.00 and it's still =
coming in=20
: rapidly. It's certainly worth $6.00, and 6 stamps, I have spent =
more :=20
than that on the lottery!! Let me tell you how this works and most =
:=20
importantly, WHY it works... Also, make sure you print a copy of =
this :=20
article NOW, so you can get the information off of it as you need =
it. : I=20
promise you that if you follow the directions exactly, that you : =
will=20
start making more money than you thought possible by doing : =
something so=20
easy! : Suggestion: Read this entire message carefully! (print it =
out or :=20
download it.) Follow the simple directions and watch the money =
come : in!=20
: It's easy. It's legal. And, your investment is only $6.00 (Plus =
:=20
postage) : IMPORTANT: This is not a rip-off; it is not indecent; =
it is not=20
: illegal; and it is 99% no risk - it really works! : If all of =
the=20
following instructions are adhered to, you will receive : =
extraordinary=20
dividends. : PLEASE NOTE: : Please follow these directions =
EXACTLY, and=20
$50,000 or more can be : yours in 20 to 60 days. This program =
remains=20
successful because of : the honesty and integrity of the =
participants.=20
Please continue its : success by carefully adhering to the =
instructions. :=20
You will now become part of the Mail Order business. In this =
business :=20
your product is not solid and tangible, it's a service. You are in =
: the=20
business of developing Mailing Lists. Many large corporations are =
: happy=20
to pay big bucks for quality lists. However, the money made : from =
the=20
mailing lists is secondary to the income which is made from : =

people like=20
you and me asking to be included in that list. : Here are the 4 =
easy steps=20
to success: : STEP 1: Get 6 separate pieces of paper and write the =

following on : each piece of paper "PLEASE PUT ME ON YOUR MAILING =
LIST."=20
Now : get 6 US $1.00 bills and place ONE inside EACH of the 6 =
pieces of :=20
paper so the bill will not be seen through the envelope (to =
prevent :=20
thievery). Next, place one paper in each of the 6 envelopes and =
seal :=20
them. You should now have 6 sealed envelopes, each with a piece of =
: paper=20
stating the above phrase, your name and address, and a $1.00 : =
bill. What=20
you are doing is creating a service. THIS IS ABSOLUTELY : LEGAL! =
You are=20
requesting a legitimate service and you are paying for : it! Like =
most of=20
us I was a little skeptical and a little worried : about the legal =
aspects=20
of it all. So I checked it out with the U.S. : Post Office=20
(1-800-725-2161) and they confirmed that it is indeed : legal. =
Mail the 6=20
envelopes to the following addresses: : #1)

E. Benford =
: 6656=20
Mableton Pwky APT.#D4 : Mableton, GA.. 30126 : #2) Kim Williams : =
3334=20
Kingsland Avenue : Bronx, NY 10469 : #3) Yury Konev : 823 Pavonia =
Avenue :=20
Jersey City, NJ 07306 : #4 A. Campbell : P.O. Box 432 : =
Nellysford, VA..=20
22958 : #5B. Page. PO Box 5024 Kendall Park NJ 08824 #6 Ewald =
Kerkhoff=20
site 41 comp. =
30 Penticton, B.C. V2A 7K8 =
Canada :=20
STEP 2: Now take the #1 name off the list that you see above, move =
: the=20
other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR : =
Name as=20
number 6 on the list. : STEP 3: Change anything you need to, but =
try to=20
keep this article as : close to original as possible. Now, post =
your=20
amended article to at : least 200 newsgroups. (I think there are =
close to=20

24,000 groups) All : you need is 200, but remember, the more you =
post, the=20
more money you : make! You won't get very much unless you post =
like crazy.=20
:) : This is perfectly legal! If you have any doubts, refer to =
Title 18 :=20
Sec. 1302 & 1341 of the Postal lottery laws. : Keep a copy of =
these=20
steps for yourself and, whenever you need money, : you can use it =
again,=20
and again. : PLEASE REMEMBER that this program remains successful =
because=20
of the : honesty and integrity of the participants and by their =
carefully=20
: adhering to the directions. Look at it this way. If you are of : =

integrity, the program will continue and the money that so many : =
others=20
have received will come your way. : NOTE: You may want to retain =
every=20
name and address sent to you, : either on a computer or hard copy =
and keep=20
the notes people send you. : This VERIFIES that you are truly =
providing a=20
service. (Also, it might : be a good idea to wrap the $1 bill in =
dark=20
paper to reduce the risk : of mail theft.) : So, as each post is=20
downloaded and the directions carefully followed, : six members =
will be=20
reimbursed for their participation as a List : Developer with one =
dollar=20
each. Your name will move up the list : geometrically so that when =
your=20
name reaches the #1 position you will : be receiving thousands of =
dollars=20
in CASH!!! What an opportunity for : only $6.00 ($1.00 for each of =
the=20
first six people listed above) Send : it now, add your own name to =
the=20
list and you're in business! : ---DIRECTIONS ----- FOR HOW TO POST =
TO=20
NEWSGROUPS---------- : Step 1) You do not need to re-type this =
entire=20
letter to do your own : posting. Simply put your cursor at the =
beginning=20
of this letter and : drag your cursor to the bottom of this =
document, and=20
select 'copy' : from the edit menu. This will copy the entire =
letter into=20
the : computer's memory. : Step 2) Open a blank 'notepad' file and =

place=20
your cursor at the top : of the blank page. From the 'edit' menu =
select=20
'paste'. This will : paste a copy of the letter into notepad so =
that you=20
can add your name : to the list. Step 3) Save your new notepad =
file as a=20
.txt file. If : you want to do your postings in different =
settings, you'll=20
always : have this file to go back to. : Step 4) Use Netscape or =
Internet=20
explorer and try searching for : various newsgroups (on-line =
forums,=20
message boards, chat sites, : discussions.) : Step 5) Visit these =
message=20
boards and post this article as a new : message by highlighting =
the text=20
of this letter and selecting paste : from the edit menu. Fill in =
the=20
Subject, this will be the header that : everyone sees as they =
scroll=20
through the list of postings in a : particular group, click the =
post=20
message button. You're done with : your first one!=20
Congratulations...THAT'S IT! All you have to do is : jump to =
different=20
newsgroups and post away, after you get the hang of : it, it will =
take=20
about 30 seconds for each newsgroup! **REMEMBER, THE : MORE =
NEWSGROUPS YOU=20
POST IN, THE MORE MONEY YOU WILL MAKE! BUT : YOU HAVE TO POST A =
MINIMUM OF=20
200** That's it! You will begin receiving : money from around the =
world=20
within days! You may eventually want to : rent a P.O.Box due to =
the large=20
amount of mail you =
will=20
receive. If : you wish to stay anonymous, you can invent a name to =
use, as=20
long as : the postman will deliver it. **JUST MAKE SURE ALL THE =
ADDRESSES=20
ARE : CORRECT.** : Now, : each of the 5 persons who just sent me =
$1.00=20
make the MINIMUM 200 : postings, each with my name at #5 and only =
5=20
persons respond to each : of the original 5, that is another =
$25.00 for=20
me, now those 25 each : make 200 MINIMUM posts with my name at #4 =
and only=20

5 replies each, I : will bring in an additional $125.00! Now, =
those 125=20
persons turn : around and post the MINIMUM 200 with my name at #3 =
and only=20
receive 5 : replies each, I will make an additional $625.00! OK, =
now here=20
is the : fun part, each of those 625 persons post a MINIMUM 200 =
letters=20
with : my name at #2 and they each only receive 5 replies, that =
just made=20
me : $3,125.00!!! Those 3,125 persons will all deliver this =
message to 200=20
: newsgroups with my name at #1 and if still 5 persons per 200 :=20
newsgroups react I will receive $15,625,00! With an original : =
investment=20
of only $6.00! AMAZING! When your name is no longer on the : list, =
you=20
just take the latest posting in the newsgroups, and send : out =
another=20
$6.00 to names on the list, putting your name at number 6 : again. =
And=20
start posting again. The thing to remember is: do you : realize =
that=20
thousands of people all over the world are joining the : internet =
and=20
reading these articles everyday?, JUST LIKE YOU are : now!! So, =
can you=20
afford $6.00 and see if it really works?? I think : so... People =
have=20
said, "what if the plan is played out and no : one sends you the =
money? So=20
what! What are the chances of that : happening when there are tons =
of new=20
honest users and new honest : people who are joining the internet =
and=20
newsgroups everyday and are : willing to give it a try? Estimates =
are at=20
20,000 to 50,000 new : users, every day, with thousands of those =
joining=20
the actual : internet. Remember, play FAIRLY and HONESTLY and this =
will=20
really : work.

PSK-31 and AGW Packet Engine support planned PacTerm '98 and PKTerm '99 Release 1.5

Muscle Shoals, Alabama. November 1, 2000: Creative Services Software has announced that PacTerm '98 and PKTerm '99 release 1.5 will support the hot new mode PSK-31 as well as the AGW Packet Engine. This is the first product to integrate DSP sound card technology in conjunction with TNC technology. This release will be a FREE upgrade for owners of the current product and users who purchase the product today.

New enhancements for version 1.5 include:
- PSK-31 sound card support, using the TNC's keying circuit or the TNC's serial port for keying the radio with RTS or DTR, saving a serial port for other functions!!!
- AGW Packet Engine for sound card Packet support
- Support for 2 simultaneous TNCs (1 packet and 1 multimode)
- Point and click to set TNC commands for startup
- Startup/Shutdown commands for each call sign
- 10 mode-specific macros in addition to 10 global macros for each call sign
- CQ, ID and QRT macros
- Pactor connected station call sign display in title bar

The popular TNC program, written in C++, has been available since November 1997. It supports Multistream Packet, each in its own window, and all HF modes, user defined macros, user defined colors and fonts, CD callbooks, COM1 through COM35 (including select USB to serial port converters), Quick Connects, save session in RTF or TXT format and much, much more.

The program runs under Windows 95/98/Me and Windows NT/2000. It is a true 32-bit Windows application, designed using the Windows Style Guidelines available from Microsoft.

PacTerm '98 and PKTerm '99 are $79.95. They are available directly from Creative Services Software or your favorite dealer. You can also download the program in demo mode from the CSS web site.
Creative Services Software is at http://www.cssincorp.com.

Windows, Windows 95, Windows 98, Windows NT and Windows 2000 are Registered Trademarks of Microsoft Corporation.

My try with one of those was bad, bad, bad. Very muddy sound - low quality devices, gawd knows what the impedance was.
As they say, you get what you pay for.

3058. FT-50 battery pack connections

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-01 21:48:53 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <3a009061$0$30011$44a10c7e@news.net-link.net>
Source record: 69738

On a couple of my pack I have been having problems with intermittent connections of the 3 gold pins on the rig maintaining contact with the battery pack. The pins all seem to move correctly and I think what has happened is over time, the metal contact plates on the batteries have been pushed in to the point the pins some times don't (can't) reach the battery contacts. Any one else have the problem? Can you get into the packs and push out the contact plates?

3059. ADMS2E software for FT-90

Source record: 69737

he "D" means discontinued. The radio IS the original DX-70T that only had 10W output on 6M. RadioShack bought all the remaining stock from Alinco to liquidate thru their .com & special order phone#'s, like they did a couple of years ago with the discontinued Alinco DJ-190. The "T" (D) is no longer available or orderable thru regular Alinco dealers, just the TH (100W 6-160meters) version.
If you plan on using 6M you may want to look at the 70TH, as it is selling for only about $120-150 more, but that is a lot cheaper than buying a 100Wpep 6M amp down the road.....

Bill, the DX-70TH is the High Power modle. 100 watts out on HF and 6 meters. The DX-70T is 100 watts out on HF and 10 watts out on 6 meters. The Alinco that Ratt Shack is selling is the Alinco DX-70T.

Dwight, first of all it's not a group but a society. Something that's equivalent to your ARRL, though a lot smaller but it's an organization with the same purpose as ARRL.

Second, as many have pointed out, why not? There is quite a large group here in Toronto with their roots in Poland, may it be first or second generation Canadians. They would simply like to celebrate the 75th anniversary not only amongst themselves but also with their polish ham friends in Poland and those scattered around the world. Many of them were active members of PZK (Polish Ham Radio Society) and being 4000 miles away from Poland, for one reason or another, are not able to participate in PZK's activities in full capacity.

73's Alex VE3GOP

I certainly understand the desire to maintain roots with the "motherland," but this just seems a strange way to do it - a "special event" to "celebrate" the anniversary of an radio organization on Poland (an organization that no longer has anything specific to do with that person in Canada). It just makes me wonder if the actual goal is to maintain roots with the "motherland," or to maintain roots with this organization.

I base that wonder on the fact that I've spent many years overseas during the last twenty years and never once did I even consider the notion of a special event to celebrate the anniversary of some organization here in the US.

Of course, it doesn't really matter what I think - you're free to do what you want. Its just that your announcement seemed odd to me, so I decided to ask rather than just walk away with a wrong impression of your intent.

Hi all,

I'm considering ordering a CCRadio, since I enjoy listening to AM radio and would like to be able to pull more stations and get better reception on the weaker signal stations in my area (Rhode Island). What I'm wondering is, does the CCRadio have good shielding against outside electromagnetic interference?

Often times, when I'm listening to the AM radios inside my house (whether it be my walkman or my JVC component system), I hear very annoying high pitched siren like noises in the background. This doesn't occur when listening to FM. I've got 2 computers that are sometimes both on and a bunch of misc. electronic gadgets hooked up in my room, which can't be helping. If getting the CCRadio won't solve this problem, does anyone have any suggestions on what I can do to remedy this?

If the radio was shielded against this noise, it would not pick up desired signals either. If you have a radio that is satisfactory for the AM BC band presently and you just want to improve reception on weak signals, get a loop antenna. It will be a lot cheaper (unless you buy a Kiwa) and it will allow your present radio to perform at least as well as the Ccrane. As for the interference, next time you have that problem, start turning things off one at a time until the interference goes away. Once you have isolated the source of the interference, you can deal with it at the source. That is a lot easier (and cheaper) than trying to deal with it at the radio.

Hello Brian, this is a way to go as well. Problem is, that the
anniversary falls sometime in December so they don't have much time to
get the ball rolling. Unfortunately, I am not the organizer of these
festivities but have been asked to see if I can drum up support on the
Internet, so I cannot really be blamed for doing this a little too late.
But as they say, better late than never.. :)

thanks Brian.

Why would you say that the organization has nothing to do with that
person? Do you not find members of the ARRL in Germany or anywhere else
in the world? I'm sure of these guys are still members of PZK.

Well, I thought I was making myself perfectly clear and hoped that a
lot of amateurs out there would come to the same conclusion as to the
intent of this activity. Based on the responses so far, I can see that
the higher percentage of amateurs do understand what we're trying to do.

Hello!

I have for sale an IC-10 chipset (comprised of an 8251A UART and a 4040 counter), so your Kenwood rig (TS-440S, R-5000) can communicate with a computer and use automatic log, CAT, etc. There are sockets provided in the rigs, so installation is easy.

Price is US$25, shipped.

E-mail if interested.

Thanks!

JOSE

Hello Bill:

I run a DX-70TH and I think its a great rig. Its a very basic compared to its elder ICOM and YAESU competitors, however "basic" is the reason I like it (not to mention the price comparison). The difference between the TD and TH models is output wattage. The TD model has10 watts output on 6 meters and the TH model has 100 watts output on 6 meters. Those are the only differences between the two radios. The detachable faceplate for mobile operation is a great feature which I personally take full advantange of when 6 meters is open.

The radio's appearance is a real 10 as you can see in the photos (click photos for the larger view). I have not personally used this rig but Kevin (W7KEV) has and will vouch for its quality.

The rig has optional filters as follows:

AM - YK-88A-1

CW 500hz - YK-88C-1

CW 500hz - YG-455C-1

This rig has the optional antenna tuner installed.

Radio comes with a like new in the box MC-60A desk Mic.

Original Box and a Manual are included.

I have the CCRadio and the Select-A-Tenna loop.

The CCRadio has a built-in 8-inch ferrite antenna, and pulls in signals nicely. Whether it would show resistance to your electromagnetic interference or not, I have no way of knowing. I do have a noisy location here -- when I tune SSB signals on the HF bands I get a lot of buzz and hash from some interfering source around here, but I don't get the same buzz on the CCRadio when it's tuned to the AM band.

My only real complaint about the CCRadio is on some local AM stations that have heavy audio compression with a lot of lows, I get a little distortion coming through the speaker.

The Select-A-Tenna loop also works quite well in pumping up weak, distant signals. However, it has absolutely no effect on local strong signals, and would not help you at all in nulling out interference on such signals -- the built-in ALC of the radio overrides whatever effect the loop may have on local signals.

If you buy this stuff from the Crane company, there's a 30-day satisfaction guarantee if it doesn't meet expectations.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

3091. HELP! ICOM 735 Has "DEAD SPOTS" Every 100KHZ

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-02 14:41:21 UTC
From: wb9gkz@aol.com
Message-ID: <20001102094121.20311.00000205@ng-fh1.aol.com>
Source record: 69668

My trusty old 735 has dead spots on every band, at intervals of 100 KHz. The digital read-out is OK, but the receiver goes silent and it will not transmit.

The "dead spot" window grows wider as the radio warms up. The window may grow from 5KHz to about 10 KHz.

Any thoughts on what to check. I have the workbench cleared and the Service Manual ready to go.

TNX........Pat, WB9GKZ

3092. Re: Alinco DX-70TD Comments Please

>
>Radio Shack has the Alinco DX-70TD on Sale for $600...
>Any Comments on this rig for a mobile unit...I have read teh eham.net
>reviews es am looing for other opinions...

This will be a long reply...

I use a DX-70T as my dedicated mobile rig, and I am very pleased with its performance. For the money, you just can't beat it. It lacks many of the bells 'n whistles that the IC-706 series and the FT-100 series have (notch filter, CW keyer, DSP, VOX, 2m, 70cm), but its raw performance will stand up with any of the competition, and its ease of use puts the others to shame (ie, NO commonly-used functions are hidden in menus!). I haven't found myself wanting any of the "missing" features, either. When was the last time you used VOX in the mobile? Fumbling with a touchy notch filter or a DSP while bouncing down the highway is no picnic. Very few mobile HF operators use CW, so no keyer is no problem for most of us. I prefer a separate rig for VHF and UHF, since I often listen to 2m while I'm surfing the HF bands. Kenwood's TS-50S is a good rig that can be bought for about the same cost as the DX-70T, but it doesn't have 6m and the front panel cannot be remotely mounted. Hardly a QSO goes by where I don't receive unsolicited compliments on the quality of the DX-70's transmitted audio, something that all Alinco gear is noted for. The DX-70's come standard with narrow SSB and CW filters, which are expensive options on the competitor's mobile rigs. Split-frequency operation with the dual VFOs is very easy, and I regularly attack DX pileups using both VFOs, even while I'm motoring down the highway in traffic.

The DX-70 does have its quirks. The mic jack is not part of the front panel, it's on the main chassis behind the front panel. If you remote-mount the rig, you need their mic cable extension cord. I made a little bracket to hold the inline connector that's on the end of the extension cord, and mounted it on the console of my pickup. That puts the mic down out of the way, rather than having it connected to the front panel. This ended up being a plus in my installation, rather than a setback. YMMV. Band changing is not as easy as I'd like. It takes a couple of clicks on a button and a twist of the multi-function knob, but after doing it a few times, you can do it without even looking at the rig. It's just a little different to get used to. The noise blanker has been the subject of a lot of criticism for not working well. This seems to vary from rig to rig. Mine works very well in knocking down ignition

noise, but as with most modern NB's, it introduces some distortion on incoming signals that have a low signal-to-noise ration. This is not a big deal most of the time (at least for me, as I try to work mainly strong stations to cut my workload while driving).

All in all, I can't imagine anyone coming up with a better package for the price. The DX-70 is the best HF mobile rig that we're not buying. With the price now at $600, I expect that "not buying" to change to "buying"! :)

Source record: 69672

Your VCO is outta wack, Icom uses up to 4 steps to the VCO on the 735 and 725 etal.. When you tune across a given band the VCO's seamlessly engage (shift) into one another.. Your problem is a very common one, the solution is to replace the plastic Icom Varicaps with ceramic/ mica style (common style).. Icom can provide the parts cheaply and they are aware of this problem on the 725,726,735,765.. These late 80's early 90's rigs had a bad run of these plastic topped caps and some stay on the money while others faulter.. Order the new ones and install, then follow the VCO alignment procedure in the service manual using a good digital voltmeter... Regards.. Richy KB2CPW

Source record: 69678

I too have seent he add. I think the "D" means discontinued. I have not seen a Alinco DX-70T for say for a few years now at the Dealers. They appeared to simply just sell the DX-70TH. My question is like you. I am wondering what the D is.
I remember the the Subaudible tone encoder was set by means of some dip switches under the belly of radio. This is archaic since most radios in the last 20 years including ALinco allow you to set the subaudible tone by means of the front panel digital display. Perhaps they fixed this? I doubt it. i noticed the same old mocrophone is used whil the DX-70Th has a much more modern mic with key for DTMF encoding. My best guess is Radio Shack bought out the last of the 1995 radios and are seeling them off. I also noticed AES Ham store is selling the Yaesu FT-840 for $ 599 also. HMM

3101. wiring a Brown key to a TS-120S

Source record: 69680

Works GREAT. That is my usual microphone.

1) Be sure you get the "normal" PC mike which is Electret.

2) Provide DC Bias for electret mic. Many ICOM provide 5 vdc on the audio line. Inside my Alinco was Jumper 1. It was on the schematic (but not in the owners manual) and it provided the filtered 8vdc to the mic.

3) LISTEN to headphones. I have found all the mikes I tried were good, but some of the headphones are real junk. I am using an Andrea, and have borrowed an tried a freinds Labtec. Both result in Unsolicited compliments on my audio.

4) I wired up a radio mic plug with little pigtails, one for mic, one for UP / DN and one for PTT. This lets me try various mics, and use my foot pedal.

KA9CAR.

Thanks for everyone's comments on 6 meters. It is a shame that more HAMs don't play around on 6 meters. The one complaint that the band is never open is not a legit one. The band is very open, it is just not utilized. I talked to Europe on SSB @25 watts yesterday and you would think we were across town. All you have to do is tune through the band and you will hear numerous beacons loud and clear.

I am still going to do some experimenting once I get the 6 m beam on the tower.

Again - thanks for all the help and comments.

Help.

I have a pc board that was overheated by a short.
It was a molex wire connector to the board.
I replaced the female molex connector only to find
the males pins that the molex connector attaches to were burnt on the board.

I got a new set of male pins for the board only to discover when
I removed the board that they have melted the solder connection to
the board so now there are no traces to solder the new pins to.

Can I use expoxy for pc boards to repair this??

In article <3a052887.25324688@news.frontiernet.net>, mdemeo@frontiernet.net says...
>
>What is the general opinion of the HF 160-6 meter rig? I am thinking
>of purchasing one and am wondering if anyone has had any experience
>with the rig. The price is in my range for the modes and bands covered.

Hi Mike,

The rig that R/S has for sale is the Alinco DX-70TD (the "D" means it is a discontinued model). The only difference between the "T" and the "TH" model is that the "T" is 10 Watts on 6m, and the "TH" is 100 Watts on 6m. Other than that, they're totally identical.

I use a DX-70T as my dedicated mobile rig, and I am very pleased with its performance. For the money, you just can't beat it. It lacks many of the bells 'n whistles that the IC-706 series and the FT-100 series have (notch filter, CW keyer, DSP, VOX, 2m, 70cm), but its raw performance will stand up with any of the competition, and its ease of use puts the others to shame (ie, NO commonly-used functions are hidden in menus!). I haven't found myself wanting any of the "missing" features, either. When was the last time you used VOX in the mobile? Fumbling with a touchy notch filter or a DSP while bouncing down the highway is no picnic. Very few mobile HF operators use CW, so no keyer is no problem for most of us. I prefer a separate rig for VHF and UHF, since I often listen to 2m while I'm surfing the HF bands. Kenwood's TS-50S is a good rig that can be bought for about the same cost as the DX-70T, but it doesn't have 6m and the front panel cannot be remotely mounted. Hardly a QSO goes by where I don't receive unsolicited compliments on the quality of the DX-70's transmitted audio, something that all Alinco gear is noted for. The DX-70 comes standard with narrow SSB and CW filters, which are expensive options on the competitor's mobile rigs. Split-frequency operation with the dual VFOs is very easy, and I regularly attack DX pileups using both VFOs, even while I'm motoring down the highway in traffic.

The DX-70 does have its quirks. The mic jack is not part of the front panel, it's on the main chassis behind the front panel. If you remote-mount the rig, you need their mic cable extension cord. I made a little bracket to hold the inline connector that's on the end of the extension cord, and mounted it on the console of my pickup. That puts the mic down out of the way, rather than having it connected to the front panel. This ended up being a plus in my installation, rather than a setback. YMMV. Band changing is not

as easy as I'd like. It takes a couple of clicks on a button and a twist of the multi-function knob, but after doing it a few times, you can do it without even looking at the rig. It's just a little different to get used to. The noise blanker has been the subject of a lot of criticism for not working well. This seems to vary from rig to rig. Mine works very well in knocking down ignition noise, but as with most modern NB's, it introduces some distortion on incoming signals that have a low signal-to-noise ration. This is not a big deal most of the time (at least for me, as I try to work mainly strong stations to cut my workload while driving). I have read that, if your NB doesn't work right, Alinco will make a mod to it for free if the rig is under warranty. I've owned two DX-70s, several years apart, and had no NB problems at all.

I have a section on my web site with pictures and information on my mobile setup, if you wanna take a look.

Try a DX-70... you'll like it!

Hi,

What's the best way to re-tune (fix) my 2m/440 dual band antenna from Anli. It worked perfectly just a few days ago, for some reason it's "out of tune"? I cann't send our receive from it. There are no physical damage to the antenna. The mobile radio works fine when I put up someone else's antenna.

Will it be cheaper to simply buy another mobile antenna or invest in a antenna tuner?

Please advise.

Jackie

From: TR <w7trx@my-deja.com>
Message-ID: <8tvgsv$6lg$1@nnrp1.deja.com>
Source record: 69636

Greetings,

I was considering the purchase of a high stability crystal for my Icom 706mkIIG.

My owners manual lists the CR-282 which retails for $150.

When I checked the HRO catalog it lists the CR-502 for the 706 and the 706mkII, but no listing for the 706mkIIG version. The CR-502 is only $77 dollars.

I am curious what the difference is between the two crystals (considering the significant price difference), and will the CR-502 function properly in my 706mkIIG?

Thanks and 73, TR

NO - the tuned input in the 2100 is not broad enough to cover the
"normal" ham band AND WARC band at the same time - you MIGHT be able to
sacrifice the appropriate adjacent ham band, retune the tuned input to
your chosen WARC band, and operate that way - but not sure how efficient
the tank circuit would be outside its design frequency...

Source record: 69638

Jackie,

If your antenna worked a few days ago and now will not work, needs to be investigated further. If you are not receiving anything then I would say that either the feedline, connector or antenna base connection is either shorted together or open someplace. The reason I say this is that no matter what the VSWR is you should be able to receive something. Attaching a piece of wire to the antenna connection should allow you to receive something. I would not retune the antenna or anything else until you find the real cause of the trouble.

Hope this helps!
Chuck

Chuck,

Thanks for the reply. I attached my friends antenna (using the same
magnet and cable) and it worked just fine. So I know for sure it's
the antenna (not the base or cable).

I can receive and transmit, but only at a fraction what it use to. I
can barely hit the closest repeater using my 50w mobile.

Anyone know what the going price will be? Or when it will be FCC approved
for sale.
Looks real good -- might have to get one of these -- nice :)

Hello,

I have a Kenwood TH-D7A 2m/70cm portable with built-in 1.2k/9.6k packet tnc. I have all original manuals and boxes. MARS/CAP mod done. Radio is in excellent condition. Non-smoker. Asking $300 shipped.

12 Yaesu FTH-2009 VHF commercial portables. Radios have 6 channels and 5 watts output. 138-151Mhz split. The radios are well-used, but in working order.
Inlcudes 6 NC-40 dual-pocket, desktop rapid chargers. These radios are programmable with the Vertex VPL-1 programming cable and CE2 software. Asking $250 for the lot, plus $10 shipping.

Yaesu FT-50. Clean condition with extra battery(1500mah, I think) and magmount antenna. Asking $200 shipped.

Terms are prepayment by MO or PayPal. All radios are guarranted not DOA.

TR,

The CR502 will NOT work in the MKIIG. I just went thru this. I have
2 706s--one is the original, and the other is the MKIIG. Unfortunate-
ly, they made a change. This was explained to my by Dwight at Comm,
HQ when I bought the new one at Shelby, NC hamfest. I had the CR282
installed (they took the rig back with them and then sent it to me).
I got the thing on Tuesday following the hamfest--really FAST service.
The old 706 is now in Wilmington having some parts replaced AND the
CR502 installed. I have to have these filters to make them NTIA com-
pliant for Civil Air Patrol. Had to put Kenwood's filter in my TS 50,
too!

Anyhow, you'll have to have the CR282 for the MKIIG.

3141. Ken G71A, Memory/reset problems/belt-clip...

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-03 01:05:19 UTC
From: Don Kulha <dkulha@vom.com>
Message-ID: <3A020F44.5F757C56@vom.com>
Source record: 69599

Greetings...

Hope this is the right place to post this...if not suggestions appreciated.

My Kenwood THG71A H/T is acting a little wierd lately. It loses what's in memory after a bit and when I do a full on reset (F+PWRON) it seems to works as advertised but it doesn't always come up "right". Occasionally it does but usually it resets to an odd set of defaults; VHF step size is 12.5, UHF freq range is 430-440, top of the VHF range is 146...sounds vaguely like a "european" set-up. It does the above consistently enought that it can't be random chance. Sounds more like a firmware than a hardware issue somehow.

I contacted Kenwood but aside from saying something about the eprom (eeprom) maybe being a problem they haven't volunteered anything other than "send it in". I asked for a guesstimate cost to fix it and the person in "customer care" said he didn't repair radios and had no idea (guess his telephone was broken). I'd hate to throw good money after bad here folks...If I send it in and I think the cost exceeds what's reasonable I still have to pay $35 for an estimate (the radio is out of warranty).

So, if anyone has thoughts on the problem, has an idea what Kenwwod has charged to repair these radios in the past, etc. your tips would be appreciated.

Thanks in Advance.....Don

P.S. - FYI, had a problem with Kenwood's belt clip on this thing. 3 times since I've owned it the radio has parted ways with it's belt clip and fallen to the ground. The belt clip stays tucked behind my belt and the radio has landed on carpet/concrete/bounced down a wood staircase. This might have some bearing on my problem, don't know, but it's more of a heads-up. The last time it happened the PB39 battery case cracked so I've epoxied the clip on. I've heard of others having this happen so some good super glue might be a good preventive folks.

I have both and my SRIII is slightly more sensitive.

Get a cheap MW loop and the difference doesn't matter.

I have both and agree with Ron. While the SRIII is not great at
rejecting strong adjacent channel interference - it certainly
outperforms the CCR on this. The CCR folds +/- 30 to 40 khz
in the presence of local 5 kw MW station. About +/- 20 khz with the
SRIII.

Battery life on CCR very much overstated. Set of D cells in the SRIII
seem to last forever.

SRIII has infamous poor dial accuracy and prone to a birdie or two
across the MW spectrum.

CCR reception on FM is quite a joke (could they have made that whip
antenna any shorter?) - SRIII far superior there.

Russ Johnson

Would recommend considering a closeout DX-375 from Radio Shack ($30) and
getting their MW Loop ($30). The 375 is quite a good performer on MW.

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

> as you so delicately put it.

Well, my friend, if you think asking a question is an attempt to
"demean" something, then you truly have a twisted sense of the word.
Look, I have no problem with anyone maintaining a connection with their
ancestry or their motherland. However, the message talked about
celebrating the anniversary of an organization, not their homeland or
their ancestry. So, I just wondered out loud if the goal was to
maintain a connection with their motherland, or to maintain a connection
to this organization.

To get back to the specific issue raised (the special permit), if the
goal is to maintain a connection to this organization (a business with
no legal, or non-profit, status in Canada), then I can certainly
understand why no special permit was issued. Of course, that seems so
obvious in light of the opening message, I didn't think I had to spell
it out for people. But, obviously some people are not able to see the obvious.

I have a Yaesu FL-2100B Amp, the matching amp to the FT-101. It is a
10-80 meter amp, no WARC bands.

CAN THIS AMP BE OPERATED ON WARC BANDS, 12 and 17 Meters, and if so what

are the complications, what modifications do I need to do, etc. has
anyone done this out there?

I know that most amps, such as the Ameritron 811's, the Ameritron 572,
etc, only have non WARC bands on their switches, but have a 10/12, and
15/17 meter setting.... can I arrange this with the FL2100B??? How
about retuning the tuned inputs to some happy medium between 15 and 17,
for example.....

ANY ideas appreciated....

3161. Ten-Tec Pegasus control program for linux ??

Has anyone heard of any ham's that are working on a control program for the TenTec Pegasus radio in Linux ?? I'm using WinDOZE now, but will be shifting strictly to Linux soon and don't want to run dual boot just for the pegasus. I'll be working on one as soon as things slow down at work, but would like some imput from others. TNX and 73's Jack WD9IFW

The RD HF +6meter mobile is an Alinco DX-70TD. I would venture to say it is the same rig as their DX-70TH as I can see no cosmetic or spec differences but with a $130 lower price. Anyone who has run Alinco rigs will tell you they are very well built. Seeing they are putting their name on the RS unit, I would think they would keep the level of performance up to par with their other gear. (imho) The Flyer ad and the RS catalog list it as $699.99 and is a special order item. It is a shame they wont have them in the stores to check them out.

It would be great if someone on this group that gets one, keeps us informed of it's performance.

Mike and the group,
I have had the opportunity to play with a coupleofAlinco DX70 rigs and
havefound them to be a pretty good rig. They have a limited amount of features
but on of the pluses are that they dohave a narrow SSB filter built in. The
reciever is good (no FT 100 this) and isa nice sized rig for mobile operation
or limited space fixed staion operation. The 10 watts on 6 meters would be a
negetive for me as I like to create DX on 6 when it's not there. Over All it's
a good rig and a good value for the money.

>but with a $130 lower price. Anyone..."
THE Radio is Not the Alinco Dx-70TH, but the discontinued DX-70T (D),
which only has 10W maximum output on 6M vs the 100W output of the TH (clearly
stated in the flyer & specs), hence the price difference.....
...."Seeing they are putting their name on the RS unit, I would think they
would keep".....
Radio Shack's name is not put on the unit, they are just liquidating the
remaining stock of old Alinco DX-70T's no name changes.....

Can't help with the band mods but those amps had a bad habit of arcing over to ground inside the finals cage...I fixed several here in town a few years ago by picking up one of those little picture frames in a dept store, the ones with a glass panel in them, you'll need to measure the cage to see what size of frame to buy. (I forget now) You use the glass as an insulator by sliding it down between the antenna loading capacitor (or plate tuning cap. - I forget!) and the inside of the cage. There is one particular size of frame which fits perfectly, something like 2.5 inch by 3.5 inch and this fixes that problem every time.

go to Radio Shack,their boom mic headset combination is the SAME as HEIL,
then just change the insert to a HC-4/5
in VK, we have 4 or 5 companies that sell the same headsets under different
names,all they do then is stick their own name plarcs in the side of the
headset.
all are uniform,been doing it for years.

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

I owned the 767 years back, and distinctly recall there are 2 modules for 70cM-
one for the low end one for the hi end. I spoke w/ a tech at Yaesu about
retuning one to the other's range and the answer was that it was not
techcnically feasable.

>I removed the board that they have melted the solder connection to
>the board so now there are no traces to solder the new pins to.

> Can I use expoxy for pc boards to repair this??

Do you mean that the traces are actually gone from the board?

If so, don't try the epoxy intended for repairing PC board traces. It
is reasonably conductive, and should work fine for traces carrying
low-level signal, but it's almost certainly not conductive enough to
use for traces carrying significant amounts of power. It sounds like
your Molex connector was probably used for power.

You *can* use ordinary non-conductive epoxy to hold the new Molex
connector on the board, in place of the soldered pins. Then, for
each pin of the Molex connector that can't simply be soldered in
place due to damage to the PC board foil, follow the board pattern
until you do reach good copper foil on the board. Then solder
a suitable-sized piece of copper wire between the Molex pin and
the good foil. This will give you a good electrical connection.

Dave

3196. WTB: ICOM IC-R100 ORIGINAL OWNERS MANUAL

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-04 00:00:00 UTC

Hi,
I have a FT-50rd, 2 yrs old and was wondering whether I should just replace the pins.
How much did the pins cost?
Do you think the replacement parts are an improvement over the originals?
How old is your radio?
Do you remove the battery a lot?
Bob KB1FRW

3208. Radio Shack HTX-242 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-04 00:00:00 UTC
From: Donald Peters <petersdw@powwwer.net>
Message-ID: <t09q2vddq9os39@corp.supernews.com>
Source record: 69595

What is wrong with the HTX-242s that Radio Shack has been clearing out?

I bought one recently for an incredible clearance price ($120!!!). A friend of mine also bought one. My friend's radio works wonderfully, but mine occasionally locks up when it transmits. All the microphone functions seem to freeze and the radio has to be reset to unkey the mic.

I've read some of the reviews for this radio on the web, and it seems that some people are having the exact same problem, while others are having no trouble at all.

This really is a very good radio (when it works correctly), but I am disturbed by this apparent design flaw. Is the microphone bad or is it the main unit? Either way, since mine is under warranty, I'll be returning it hopefully in exchange for a working one.

Greetings,
I drive a semi, and am looking for a dual band 2M/440 radio with a remote head and large display, any such animal out there? It would also be nice if I could change the display color ie: amber to blue or green for readability.
Any suggestions, recommendations or experience with such a radio?
Thanks,
Gerry

From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <8tvk0fsjh6@mark.ucdavis.edu>
Source record: 69560

Hi there,

There are a few issues to using your amplifier on other bands. First off, there are the tuned input and output circuits. Depending on what type of circuit your amplifier uses for both ends, some warc band operation may be possible. This would require someone who really knows amplifier circuits to have a look at it.
Input circuits are a little more tricky, but conventional pi outputs can be bandswitched to the new range.

Another very serious issue are stray series and parallel resonances in the plate choke and other circuits. Most often the generic early amplifier moved problem part value "results" issues into an area of frequencies where they never expected you to operate. Now that you want to place a signal through the amplifier in that frequency range, these parts will smoke when the rf hits them.

Yes, there are amplifier circuits and parts which you can place in your amplifier to make it wide band. But it's a lot of home work to do it right. Otherwise your guessing and often smoking the amplifier...

cheers
skipp

: are the complications, what modifications do I need to do, etc. has
: anyone done this out there?

: I know that most amps, such as the Ameritron 811's, the Ameritron 572,
: etc, only have non WARC bands on their switches, but have a 10/12, and
: 15/17 meter setting.... can I arrange this with the FL2100B??? How
: about retuning the tuned inputs to some happy medium between 15 and 17,
: for example.....

: ANY ideas appreciated....

Do yourself a favor and when shipping do not use UPS. They are the most expensive and the most incompetent delivery service available. They find it impossible to deliver even the simplest of package without damage and on time. You do not need the trouble this company will cause.

I'm not sure why you need epoxy if the traces are gone. Is the board
itself missing a chunk? If the connector can be solidly mounted to the
pc board as is, I'd just do that and run wires to the connectors from
the traces that are left, or make my own new trace from solder. Thats
what I usually do on a gone trace. I just melt a thin string of solder
to make a new one if it isn't very long. If it's too long to reach, you
may have to wire it up. If you do have to repair the pcc board, I guess
epoxy would work. I've never had to do that before, so not sure. One
thing, once cured, epoxy will be hard as a rock. Fiberglass repair might
work also. MK

Funny- My experience has been quite the contrary- My biggest problems
have been Fedex (gets lost when not in the city) and RPS (sends Semi on
country roads with 2lb package)

Another problem is people posting stuff like this on multi-NG addresses,
not on subject- and probably just to get revenge after a dissagreement.

Strange. Over about 5 yrs or so, I've had at least 60 or 70 pkgs delivered
and sent through UPS and only two problems. One was delivered two days late
and the other was a minor damage problem . They had me fill out some forms
and sent me a check for the insurance money within one week. They told me
to keep the goods and they didn't even want to look at it. Couldn't ask for
better service. Unfortunately, it is inconvenient for me to use UPS and I
end up using USPS and with them, have never had a problem.

I agree. UPS' delivery time has been ridiculous lately. I have been
shipping with the Post Office Priority Mail for items less than 5 pounds
because it is a lot cheaper and quicker. Although, I believe UPS is
cheaper on the heavier stuff than the post office but it takes longer
for UPS to deliver.

3239. Re: Radio Shack HF Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-05 00:00:00 UTC
From: ns1r@aol.com
Message-ID: <20001105114344.25981.00000727@ng-fv1.aol.com>
Source record: 69486

The Alinco DX70T(d) is simply a Alinoc DX-70T that is (D) discontinured. Radio Shack purchased all existing inventory from Alinco and is selling them out for $599 plus shipping. The radio was available in 1995 so it is a older design burt the sest price for a HF moble radio. The 6 mtrs is only 10 watts and the Sub audible tones for FM must be selected with a set of dipswitches under the belly of the radio.
If you simply want HF for chap $ you can't beat it for the $.

3240. CASH FOR=>[HACKED GM300's, MAXTRACS, RADIUS]<=====

Hi:

WANTED: BROKEN, DEAD, GM300's, MAXTRACS, RADIUS

Will pay a fair and reasonable price

If you have some Old Radius GM300's, and wish to turn them into CASH
or wish to trade them out for some working radios, please feel free to contact
me at anytime.

Lots of stuff in the warehouse for trade, including, but not limited to Bird
Wattmeters, Elements, Dielectric Wattmeters, Counters, Tools, Radios,
Motorola portables VHF and UHF, Tons of Programming Hardware (Pls, No SW),
manuals, and just about everything needed for programming Mototola Radios, and
some Bendix_king, Rehlem, Icom, Fushitsu, ect.

I am looking for GM300's, (target radio at this time) Also interested in
Maxtracs, Radius Mobiles both UHF and VHF.

Will pay a fair and resonable price on ones that are complete, and will
consider water damaged ones too on a case by case basis.

Please feel free to email @ anytime.

Tnx

Monty

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi all,
I have for sale a nice Icom 725 HF radio. This radio has the hard-to-find
UI7 AM/FM board installed.
Also is the matching AT-160 antenna tuner and bracket that factory mounts to
the 725. This tuner is also compatable other newer Icom series radios with
the tuner button feature like the 706. I have the manuals for both the
radio and tuner and have the orginal box for the 725. This radio is in very
good condition with low hrs. and would give it a 9.5 out of 10 on appearance
and works 100% with 100 watts out on ssb/fm and 25 watts on AM.
I am upgrading is the reason for selling.
$550 plus shipping for package
No trades please...
Repy to gbaker@pacifier.com for more information

Icom 761 - W/Full filter set, 2 CW, 2 SSB. W/optional HM36 hand mic.
Built-in power supply. Appearance is 9.5, only some
wear on silkscreening on a couple of the mode buttons. Receive on
this rig rivals Omni6 and FT1000, great contesting rig.
100+ watts clean TX. PBT amd IF shift. Auto-tuner. Recently
serviced and aligned by Icom America. Will not ship, this is a big
beefy radio. Will meet or deliver within 100 miles of Nashville,
TN. Asking $1000.

Bob,

I have a 3 year old unit which started to develop stripes last winter.
There seems to be a narrow band, not too hot, not too cold, where it
is fine. Above or below that, I get stripes. Usual 1-3. After the
rig has been on for a bit, they go away, usually. As they don't cause
any legibility problems, I suspect I will leave it alone.

> conditioned batteries.

Oh, come on Phil, you didn't really expect a message relating to anything electronic in a radio newsgroup, did you? Since this is a radio newsgroup, the message had to be about United Parcal. Gee, you need to get these newsgroups figured out. Electronics related stuff is discussed in the child birth newsgroup, and I haven't found where amateur radio related topics are discussed yet. If you come across it, let me know.

I had the same symptom but the problem unfortunately was the pin itself. It became intermittent and then eventually popped out of the hole along with the spring. I had to get a whole new one from Yaesu, take the radio apart and re-solder it to the board.

I have now had to do this three times - once for each pin as they have all done the same thing to me.

FS: Alinco DR-605T Dual band VHF/UHF Mobil w/CrossBand Repeater Feature

- Special aluminum mounting case for use as a station rig
- Power cable and microphone
- Operation manual
- Original box

Very good cosmetics, excellent electronics - 35 watts out on both bands.

$250.00 + shipping from 97006

Thanks,
Rick

Eddie, it's a huge hassle...I had one of those beasts and I fought with it for
years. The potting compound in the VCO box turns black and crispy and very
corrosive. It eats the leads off the components in there. (and there's a bunch
of 'em in that box). I've looked into other 440s and noticed that the compound
is cream coloured and sort of rubbery, but I don't know if mine was that way at
first or not.

Mine was very old (bought in 1982 or so). It was only a fair radio, was
extremely fussy about having any other rig running off it's power supply, I used

to run a 2 meter rig and found that it caused 'RF in the audio' on the 440. The problem with digging the compound out is that there is a hell of a bunch of tiny capacitors and resistors in that box all packed like sardines and it makes it almost impossible to get all of the stuff out therefore you're gonna be plagued with problems (if indeed you do have the bad stuff in there). I used a jeweller's screwdriver, a magnifying set of glasses, lot's of light and a buncha hours and I STILL didn't get it all.

To tell you the truth, I'd be surprised if you do...having bought it in 87...I'd have thought that K'wood would have fixed their problem b4 that!...

ps:
Mine didn't have the 'whine' but did have the frustrating 'multi number syndrome'. (use a fingernail to poke the buttons instead of your fingertip, seems to work better!)

Message-ID: <3a078226_4@corp.newsfeeds.com>
Source record: 69417

It wouldn't make any difference.... people would still cross-post. They think that by putting their ad in front of as many people as possible they maximize their chances of selling it for the best price. In a sense, that is correct, but they don't stop to think of the number of folks that get royally hacked off at them for taking up their time... whether it be the FS/FA debate or UPS messed me over (would that be screwed-UPS?), or people complaining about having to download the same message from several groups when they are paying a per minute charge for internet access. Of course, then all the flaming starts and threads get perpetuated and they go on and on when people should just let them die. But they can't do that. They just have to get their $.02 in.
It often (notice I didn't say always) boils down to someone thinking that they are better than someone else. It might also be a case of someone new not knowing what is going on. A lot of the mess could be sorted out if some people would simply be a little less sensitive, and if a few people would simply stop complaining about stuff and set up a few simple filters.
Another simple way to deal with the issue it to simply press the delete key. Suddenly the message is gone, and can't hurt you anymore. Wait a minute... what am I saying.... That's never gonna happen. Please continue.

Look for an old computer "sidemount" which allowed a "desktop" computer to be mounted on its side. Some are plastic, some are metal, the metal of course would be the best for your application.

When I lived up north it was easy to find a ground for my rigs through the plumbing pipes, etc. Here in Florida however, almost everything is PVC. Here's my plan: I intend to run transmission line into the house through the wall near the station location. There will be a lightening arrestor in the line from the mast mounted vertical. (ten meter vertical, about twenty feet high, I'm starting slow.) It will be adjacent to the transmission line entrance point, connected to an 8 or 9 ft. ground rod. From the ground buss in the shack, I intend to run a bare ground wire through the line access point out to be connected to the same ground rod used for the lightening arrestor.Any comments or suggestions will be appreciated.

3318. Kenwood TS-440 SAT- Whining noise -Hotglue fix ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-06 00:00:00 UTC
From: Eddie Bryant N4UMJ <N4UMJ@carolina.rr.com>
Message-ID: <JuAN5.31795$G95.9026620@typhoon.southeast.rr.com>
Source record: 69540

I have a 1987 vintage TS-440 SAT and it works normally except that
it has a slight annoying whine just slightly above the background
noise that slowly ramps up in frequency and then drops only to
have another heterodyne in and start again.
Sounds sort of like one of those arcade motorcycle games.
This does not move the S-meter. Tapping on the radio doesn't seem
to have an effect on it so I would think it would not be a loose
connection.

Is this the PLL potting compound that I have read about that
eventually attracts moisture and causes the PLL to become unstable?
If so what is the recommended fix. I have seen repairs that mention
hot glue replacement. Seems like that would be too permanent.
Hopefully you would not have to replace any more components
as this seems like it would be a permanent seal.
Also for the existing compound that is in there what is the best way
for removal? And after removal and replacement I read about a tune
up and alignment. Not too sure what test equipment this involves?
I have a TS-440 service manual if it is contained in it.

I might attempt this myself if it is fairly straightforward.
I plan on selling the radio afterwards so I am not too crazy about
putting this much time into the radio if it is too much of a hassle.

Also this radio has the famous multiple 999999's when a single 9
key is pressed.
I heard there was not much you could do for that.

Thanks in advance for any replies,
Eddie Bryant

Being in Florida, the best advice I can add is to set things
up where you can readily DISCONNECT the antenna and and PULL
the ac power physically. Having a good ground is a mixed
blessing if a lightning surge comes in via the power. It'll
jump right thru your gear to get to that nice ground.
Oh, and pull ur telco/modem connection too when a storm is
in the area.

Message-ID: <3A06EB8C.59A7@bellsouth.net>
Source record: 69546

I have both the original 706 and a MKIIG. They have been fine mobile and base rigs. The only thing that annoys me about them is the "sharpness of the squelch. There is no "delay" in it, i.e., it's either on or off. If you set it at the threshold, it seems to be affected by anything and everything, popping and hashing, etc. If you set it "deep" you miss weak signals. Is there a way to add a little delay or "hysteresis" to the squelch circuit? Haven't seen anything on this in mods.

3325. Question on jungle radio for nature conservation project

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-06 00:00:00 UTC
From: johnburkeburnett <johnburkeburnett@email.msn.com>
Message-ID: <u5o#GoBSAHA.330@cpmsnbbsa09>
Source record: 69547

Our non-profit organization is working with indigenous people in Papua New Guinea to support local rainforest and marine conservation efforts. Since there are no roads in the area and transportation is difficult, part of our strategy is to facilitate enhanced communication among villages that are separated by dense lowland mangrove and rainforest. We are investigating how to set up a simple, low-cost, yet effective radio network among these villages in order to provide them with a means of communicating among themselves on the activities of logging companies and fishing trawlers that are degrading the natural resource base.

Does anyone know what sort of radio system we would need? CB or SSB? We don't need anything fancy, just effective; we also want to minimize cost and need something fairly rugged. Local regulations require use of 27 MHz band frequency for CBs. I understand that trees can absorb much of the radio transmission, but don't know to what degree this will be a problem. We would need sufficient power to transmit over perhaps 60 kilometers (37 miles). Also, we are talking about a very poor and remote area without any electrical supply other than batteries that are brought in. What sort of antennas would be required at a minimum? Any details anyone could provide would be most appreciated. Radio systems and the technical specifications involved are not part of our expertise, so please also advise of any other considerations we would need to take into account.

Thanks for your help.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-06 00:14:07 UTC
From: w2zr@aol.com
Message-ID: <20001105191407.26165.00000674@ng-cp1.aol.com>
Source record: 69516

My personal experiences with UPS have been terrible. They pushed my friend's Viking Valiant end over end up the driveway. The largest transformer tore out of the chassis, smashed every tube and dented the cabinet. I wouldn't trust them with anything less fragile than an anvil.

73,
Steve W2ZR

3327. Ray Jefferson Radio Direction finder?

Hi, anyone know where I can get some info on a Ray Jefferson (model 6140) radio direction finder? I picked one up at the hamfest today and I would like to get a manual. A bit beat up but it seems to work fine.

Thanks for your help.

Art KF7GD

3328. In need of mounting / Bracket ideas!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-06 00:32:39 UTC
From: Dan Hayman <DanHayman@Accomplishments.com>
Message-ID: <H_mN5.23600$Pw6.1793268@newsread1.prod.itd.earthlink.net>
Source record: 69518

Hi.

I have a new RV (Class C). Not a lot of room in the cab area. I would like to inexpensively mount my Kenwood TS 440S w/o drilling holes (the catch!!). I have the idea of placing the radio on the floor & standing vertically (so I can operate while mobile). In this way, I could place the radio on the side of the seat. I envision a bracket which looks like this: ____|____|____ with the vertical bars holding the radio up and the horizontal bars acting as a platform on the floor (this would provide stability & walkway clearance). The problem is that I can not figure out how to build this or for that matter find such a beast sold. If anybody has any ideas which would help, I would love to hear about it. Alternative ideas are welcome as well.

After this is figured out, it will be a matter of mounting a 102" mast to the RV, using the internal A.T. & off we go!

Thanks in advance & 73's

Dan, KD0DAN (formerly KB6CYW)

Oh.....

I thought from the title that you were relating the fact that
if one overcharges the batteries in an Uninterruptable Power
Supply (commonly called a UPS) the UPS will not deliver as much
power as compared to properly charged and conditioned batteries.

Walt, I perked my ears up when I saw GMDSS in your post :) . That system cost me a job (actually it made me realise the folly of working for a living!). I was one of the Radio Officers on a car ferry between Canada (NS) and USA (Maine). MV Bluenose. (C6DZ). The powers-that-be installed a GMDSS and closed the Radio Room and we three ROs retired, one after 38 years of continuous service on that ferry!. What I'd like to know is how versatile, reliable and easy to use for the average Deck Officer (who I've found to be somewhat lacking in electronic skills) is this system?. (this of course doesn't apply to you because of your ham license...) :)

3341. Older RCI2950 RX problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-07 00:00:00 UTC
From: n2ogm@aol.com
Message-ID: <3a087703.2618421@netnews.worldnet.att.net>
Source record: 69250

I have an RCI2950 about 11 years old that seems to have gone deaf. It will respond to very strong signals from a signal generator and I can trace the signal through the RX sections, but not sure what levels should be in various stages. The unit is also quite noisy with and without an antenna connected. The TX is right on the money into a dummy load, power output level, audio quality/ level, and frequency all correct. It will still hold stored frequencies without power applied so I assume the internal battery is good. I've been the only owner and have done no modifications to the radio. It has always worked well in the past and never needed service. Anyone else ever run into this? Thanks.

Chris N2OGM

3342. Maxon Radios - service manuals, software, programming cables.

Newsgroup: rec.radio.amateur.equipment

Remove the .nospam before replying.

The following is documentation and software NOT hardware. All is offered in good faith and believed to be correct and accurate.There is adequate detail to construct several of the programmer hardware interfaces from this documentation but this is not for the beginner.

Maxon Service documentation and software :

SD125 VHF & UHF Data Radios
- Full service manual
- Programming software
- Drawings for programmer cables
- Drawings for programmer interface to PC

SP130 & SP140
- Full service manual
- Programming software

MM6854 Dual Band GSM Modem
- Full service manual
- Command summary

PM160 & PM100
- Full service Manual
- DSM99 group programmer software
- PM160 VHF & UHF programming software

SM2000 (PM100)
- Full service manual
- Programming software

SP110
- Programming software

Misc. programming software and manual for the following radios:
- SP-2150, 2350 and 2450
- SP-2550 and 2850 series
- SPX-2550 and 2580 series
- SL-70W
- SM-4150
- SP-120, 130 and 140
- Pioneer VHF, 220 and UHF - very little information about this unit.

Drawings of programming adaptors (documents):
- ACC 2000 (for SD125)

- QPA 4000
- BP 4000
- SM 2000
- DSM 400
- MAX236 Interface IC

The majority of the electronic documentation is in PDF format. A reader is also supplied (Adobe Acrobat). The package contains a CD-ROM (PC format) and a small set of drawings.

All this very current data for $27 including shipping anywhere in the USA. by Priority Mail. Accept PayPal and Cashiers Checks.

Email me for further details.

Mark.

Hi Gang,

Am interested in buying a very inexpensive 10M converted CB
type rig or one of the 10M Uniden/Radio Shack transceivers.
Even better if it does CW, but a simple SSB rig is fine.
Price needs to be cheap .... dont bother if your price is more
than $30 or $40 for the CB converts, or $60 to $70 for
the radio shack HTX100, or $100-$120 for the Uniden 2510/2600.

Let me know what you have, price, condition, etc.

No easy access to parts like PLL IC's, varactor diodes
or IF oscillator crystals here so needs to be converted already
and in good operating condition.

Need a cheap rig for DXpedition use and dont want to be out big
bucks if this one gets confiscated by the customs yahoo's.

thanks.

Dave,

I talked to the tech that works on the FT-847 and he said it would be best to send it in for he feels that it is more than one part that has gone out. To try and repair it over the internet is impossible without seeing the radio.

If you decide to send it in, put a note with the radio telling about the problem and phone number where you can be reach. Send to:

Vertex Standard USA, Inc.
ATT: Amateur Supply
17210 Edwards Road
Cerritos, CA 90703

Turn around time is around 8 weeks and the labor rate is $50 and hour.

Hi Rok:

FYI - 6 meter FM is getting a lot of action in the USA with
repeaters and 52.525 simplex. Many people using the Icom 706
mobile and fixed and quite a few Alinco 6 meter rigs too plus
the Icom and Yaesu HTs.

73 and hope to work you - its the band where anything
can happen!

Depends on the part,

If you are looking for something like a power unit (final chip) they are made be toshiba and you can get most of the internal parts from RF parts company.

Some of the accessories you can get from AES and if AES does not have it they can usually tell you who might.

Good luck with it.

Hello Jim:

My advise to you is make sure you connect you grounding system to the main electrical service panel ground as per the National Electrical Code. In addition, use multiple points (several ground rods) all connected in series with your station ground which ultimately connects to your electrical service panel ground as well. My QTH is subject to lightning hits (Ive lost computers, tv's, well pumps, electric g-door openers and the like) and this is the only system Ive found that minimizes damage. Of course, nothing can stop damage from a direct lightning hit however one can try to prevent the resulting damage. Also try visiting www.polyphaser.com and look up the essay on "Multiple Point Grounds".

I hope this helps.

Source record: 69440

Hello,

for an experiment I need an receiver with signal-indicator at 147.456
Mc.
My Yeasu 290R should be possible to modify the
frequency range from 144-146 to 144-148.
Can anybody teel me how to do it?
It should be a minor modification, as some of the
transceivers were standard able to do the complete range from 144 to
148.

Thanks in advance,

Jan de Vries

3360. Icom IC-207H Mic Ext. Cable

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-07 00:00:00 UTC
From: Chris Singleton <ke3mc@qsl.net>
Message-ID: <t0g8edivp2hoe4@corp.supernews.com>
Source record: 69442
Cross-posted to: alt.ham-radio.mods,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Are there any alternatives for a Mic extension cable for the IC-207H other than purchasing the OPC440 ($86) or OPC647 ($55) from Icom??? It seems to me that there must be a way to make this cable a lot cheaper than this- especially when I only need about a 3' extension... Any information regarding sources for the "special" shielded cable and RJ-45 connectors would be appreciated.

If all else fails, I suppose that I'll have to "bite the bullet" and pay the inflated prices... It seems that they really have me by the b***s!!!! If I don't extend the cable, the tension of pulling on the Mic (radio is just below the driver's seat) will eventually cause the cable to separate from the connector and I'll have to replace the connector (or cable) anyway.

73's.

Do you remember the Antenna Specialist PDL-2 and Moonraker IV beams?

Well they have been discontinued! BUT, Antenna Specialist has approx
200 each of these left! They are also selling DIRECT!

PDL-2 = $85.88
Moonraker IV = $169.00

Shipping is $20.00 and they will charge you your local tax.

These antennas were designed for the 11 meter band which makes them
modifiable for the 10 meter band.

For the Moonraker IV, you would shorten each of the elements by cutting
the bottoms off and re-inserting them; shortening the fiberglass sections
and wire loop; re-spacing the elements on the boom; re-tuning the gamma
match section.

I DO NOT KNOW THE MEASUREMENTS! (Wish I did) I'm hoping that Roy
can (has?) model this antenna and will publish the info!

The PDL-2 modifications should be similar.

This is a GREAT opportunity to jump on well built and designed antennas
that are inexpensive and easy to turn!

Antennas Specialist says, "When they are gone...they are gone!"

Dino

Since you are in DC, start by paying a visit to the embassy and get some help from them in determining the available legal spectrum available to you in country for this sort of thing. I would expect a very lax regulatory structure in P2, but you have to stay legal. Solar cells can be used to charge batteries so that is not a major problem but will become expensive. 27 MHz is badly trashed both by American activity as well as pirated activities from the Malaysian area, and the legal limit on power would not serve you either. This will be a challenge to find a piece of spectrum which you can use with little or no licensing and still make the haul over the mountanous terrain you have there.

From: Peter Gogas <peter@gogas.org>
Message-ID: <t0f70b4kvqjdd0@corp.supernews.com>
Source record: 69427
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have to complete Syntor X radio's with 32 ch scan heads. I recieved one from a local municipality and another at a hamfest. I connected these to a power supply (connected cable to radio first, then applied power). I can recieve fine, but when I try to transmit I get nothing. I've swapped parts on the two radios and I still can't get either of them to transmit.

Is there any tricks to getting these to transmit? I have them connected to a 50amp Astron power supply, so power should not be a problem. I used a voltmeter and confirmed that the drawer units are getting power.

Thanks,
Peter Gogas, W1AGG

Hello all,
I've a 1200 MHz module which seems out of order on my IC970.
only "-.---.---" is displayed on screen and not "1.296.000" for example.

Do anybody can help me to adjust the PLL of the module (I think the
problem is here)

Or do anybody can send me by mail any documentation or/and schematics of

it (by scaning ?) , I didn't recive
any documentation when I receive this module in second hand.

Sorry for my english

3381. FS:CUSHCRAFT R7000 HF vertical antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-08 00:00:00 UTC
From: john williams <ac6ts@n2.net>
Message-ID: <3A0A097B.F7BC9D76@n2.net>
Source record: 69248

FS:CUSHCRAFT R7000 HF VERTICAL ANTENNA

Cushcraft 10, 12, 15, 17, 20, 30, 40 Meters HF antenna with
manual. Complete and in Good shape. Works great dx. This is a half wave
on
all above bands. 5 yrs old. Rated at 1500 watts. Has never had more than

100 watts run through it. Can roof mount etc. Has it's own radial system

built in with a small footprint. Already assembled, I broke it down into
3
sections for transport. Marked the joints with a felt marker for easy
setup.
This is a very GOOD antenna. I have too many overhead power lines to
safely
set up here at my home. Antenna is 24 ft. long.
Price is: $150.00 firm. Buyer must pick up in Escondido, Ca., North San
Diego
County. Sorry...I will not ship. Feel free to email any questions to me:

John Williams at ac6ts@n2.net or ac6ts@amsat.org

Thank you for reading.

Paul,

You are exactly right about the vert portion. The reason I mentioned it is we set my Dad up with a Ten meter mobile. Besides his mobile, I noticed a lot of mobile stations with considerable better reception on the vert. This also helped in local FM modes. I never tried it DX on AM or FM though. It would be interesting.

It was a long time ago and I remember it was fun and challeging to mod this ant.

Mike

Herbal V: An Incredible All-Natural Healthy Alternative To V----a

Herbal V is the All Natural Approach to Male Virility,
Vitality and Pleasure.

Available N o w !

Welcome to the New Sexual Revolution.

It's the all natural male potency and pleasure pill that men
everywhere are buzzing about. Herbal V is safe, natural and
specifically formulated to help support male sexual function
and pleasure. You just take two easy-to-swallow tablets
one hour before sex. And there's more great news - you can
get Herbal V for less than $1 a pill.

Amazing word of mouth praise on Herbal V has been spreading
like wildfire-already over 1,500,000 men have chosen
Herbal V. Since it is 100% natural you will never have
to worry about safety. Try doctor-recommended Herbal V
today and have the greatest night of your life!

Herbal V... Bringing Back the Magic!

1,585,000 men can't be wrong. To date over 1 million men
have tried the super supplement Herbal V.
Here is why:

No Doctor Visit Required
Available Over the Counter
Not a Drug
100% Natural
Safe, No Worries
Highest Quality Pharmaceutical-Grade Pure Nutriceuticals
Guaranteed Potency & Purity

Be a Real Man Again!

Questions and Answers

What is Herbal V?

Herbal V is a proprietary blend that was specifically
developed as a safe alternative for men who prefer
an all-natural approach to address impotence and boost
sexual performance. This amazing formula first became
popular with Hollywood insiders and the wealthy elite.
They were maximizing their sex lives, long before it

was available to the general public.

How does Herbal V work?

Developed by a team whose goal was to create the perfect all-natural aphrodisiac. Herbal V is the result of that remarkable effort. The Herbal V formula contains a precise blend of cutting edge pro-sexual nutrients from around the world that provide nutritional support, making it possible for a man to have a pleasurable sexual experience.

What can Herbal V do for me?

Herbal V helps support male sexual function and pleasure in a safe and natural manner. Simply put, it can make your sex life incredible.

Is Herbal V Safe?

One of the great things about Herbal V is that it is not a drug. It is an incredible herbal dietary supplement that provides nutritional support for male sexual function and pleasure. One of the most comforting features of Herbal V is that you never have to worry about safety.

Herbal V: Safe - Natural - Exciting

Many have speculated that because Herbal V is so popular with men, it must contain prescription drugs or chemical components. Herbal V does not contain any elements or traces of any prescription drug. Herbal V is made using the world's most technologically advanced state-of-the-art cold processing equipment to ensure maximum purity. Herbal V has been independently analyzed by the nation's premier testing facility to ensure purity, quality and to end the rumors that, because it is so popular, it must somehow be chemical. It is not. Herbal V is natural - just as it says on the label. Herbal V is simply fantastic!

Herbal V: Ingredients

Yohimbe, saw palmetto, avena sativa, androstenedione, guarana, taurine, siberian ginseng, tribulus terrestris. Tribulus Terrestis is certified to enhanced testosterone levels by increasing Luteinzing hormone (LH) levels. Androstenedione which is a precursor to testosterone unlocks bound testosterone and makes it biologically active again quickly. This means a dramatic surge in desire. Avena Sativa Stimulates the neurotransmitter pleasure centers to maximum capacity. This greatly intensifies pleasure.

Just listen to what Herbal V has done for the sex lives
of people like you!

On a scale of 1 to 10, it's a 15. Electrifying. It's like
a wonder pill!
Justin Q B., New Haven, Texas

I haven't had sexual relations in 11 years. Then with
Herbal V it was... wow! It works again!
Sid R., Lakeland, Florida

I had sex four times in one night. It made me feel
like a 19-year-old again.
Chip S, Beech Mountain, North Carolina

Herbal V has turned my husband into a Sexual Superman!
I like the fact that it's all natural and has no
side effects. It's bringing back the good old days.
Jennifer B, Beverly Hills, California

The above testimonials are from product literature,
and we have not independently verified them.
However, the following testimonial is from a "senior"
gentleman who has purchased his second bottle of
Herbal V. When we heard his words with our own ears,
we asked his permission to print them here.

Man! I'm wild as I can be! I feel like I'm 25 years old again!
I'm not believing this!
Mr. Murphy, age 64, Lampart, IL.

Risk Free: Double Your Money Back Guarantee

If Herbal V does not give the desired results as stated
above, simply return the unused portion for a
double-your money back refund. No questions asked !

Order Now: Safe, Fast, Secure, Private

Source record: 69318

Hello Terry. "Been there, done that" says it all. Being a crystal rig, it should be a matter of taking the manual for the radios and replace the current caps with caps of smaller value to move the freq range. A good crystal company can make the crystals for you. Crystal rigs are relatively simple compared to a synthesized radio.

>I bought a quantity of Ritron Portable handheld transcievers which are
>currently crystaled and tuned at 47.42 MHz (Red Cross Freq)
>
>Would like to recrystal and tune to 6 meter band. Does anyone have any
>information on these? Ritron doesn't even answer their E-mail!!
>
>Ritron model AIE9QZRT-050.

Message-ID: <s4li0toefn23q3o67cslco13dk3vji8oeu@4ax.com>
Source record: 69319

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

#1 - VERY BRIEF INTRODUCTION

Due to an enormous client list, I can only take serious applicants at this time. I am offering a full or part-time position in processing e-mail. You can work at home. I do require that you have a computer and are familiar with internet/e-mail functions. As to the salary it's totally up to you. You will be running your own business, the sky is the limit. What you will see represents a totally legal money making business that anyone can generate a significant residual income.

You will receive full instructions, and I will always be available to help you and answer your questions. This is a genuine home business. This is not a chain letter, money game, telecom scheme, or any of the multitudes of dubious "business" offers that come through your e-mail box. This business will generate a residual income of $2,000 to $6,000 every month with only part-time commitment (about 10 hours a week).

A full time commitment (about 30 hours a week) based on statistics gathered from associates world wide, will translate into an income of $10,000 or more per month!

To prove my confidence and sincerity in this opportunity, there is NO CHARGE to join us for the first month. You will receive all information to get started plus the first month's information package ($90 value). If by remote chance you are not satisfied with the program after the first month and want to discontinue, you may by all means do so and I will not contact you again.

But on the other hand, if you are satisfied with the program and wish to continue after the first month, that is when you have to pay $90 for the next month's information package. Since you DO NOT pay anything until after you are already earning an incredible residual income, you have absolutely nothing to lose.

IMPORTANT!

If the above opportunity interests you in the least, and you would like more specific information about our business please contact me at adenby@consultant.com and type in the SUBJECT LINE: "FORWARD PROJECT 21 INFO". Insert your full name, your correct e-mail address, and any specific questions you may have at this time in the body of the message.

We are successful only if YOU are successful, and therefore we will do everything in our power to ensure that your relationship with us is a profitable and successful one. I look forward to your response.

Sincerely,
Angela Denby

All,

I am looking for the service manual for a Kenwood TS-520 service manual (a photo copy is fine). I am willing to pay a reasonable price for the service/copying costs/shipping if anyone has this manual and is willing to make a copy.

I am also looking for the CW filter for this rig. The part number is YG3395C.

Please send all response to me via email as I do not get onto the newsgroups very often.

Thanks in advance to all who reply,
Rick

Source record: 69324
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

Hello Mike:

I agree with you about these antennas because I too had one in the early70's and all that has to be done to modify them is to cut about about 4" off of each stainless steel radial end in addition to shrinking the circumference of the reflector loop by about 1'.

However if one is to use the Moonraker 4 for 10 meter ham use, the vertical half of the antenna is wasted because it doesnt get used (unless contacting local 10 meter mobiles is considered). If one takes away the vertical use of this antenna, all one has left is a 4 element horizontal quagi which can be bought or homemade for alot less than $169. I agree that if one of these antennas were a freebee or a gift for someone that it would definately be worth the time installing, but not if one has to buy it new for $169.

The PDL II (AV-122) on the otherhand is definately worth buying for $89 (if this is the correct price) and converting it to10 meters because the fiberglass spreader arms and the orbital gamma matching sections alone are probably worth $30-$40. Not to mention the mounting hardware, the #14 bare copper wire, and the boom itself.

3401. LAST DAY! FA: Viking Challenger HF/6M Transmitter w/VF-1 VFO!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-08 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <3a09b2bc.80317004@news.pacbell.net>
Source record: 69335

I have for auction a Johnson Viking Challenger HF/6M Transmitter along with the Heathkit VF-1 VFO. This is a really nice set. These are collectables from the 1950's-1960's. The transmitter has been tested and transmits full power out!

The transmitter has a built-in power supply, and the VFO gets its power from the transmitter. The VF-1 VFO plugs directly into the front of the transmitter. I will include the manuals that I printed up for the Challenger Transmitter and th Heathkit VF-1 VFO. They show how to tune up the transmitter and other misc.

This is an excellent opportunity for someone to get a deal! Add this to your radio collection!

The price is great and there is ~NO RESERVE~ AND It is ending in about 3 Hours!

HTX-404 HT, with charger/adapter, flex antenna, box & manual, good condition, works fine... ni-cad pack is dead - so, I have been using it on the "AA" battery pack case when portable. I really don't use the radio that much anymore and there was no need for me to go buy a new ni-cad pack...
$110.00 (shipped USA only) Contact: BCNY@aol.com.

From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <3A09CAC4.686F7868@dialpoint.net>
Source record: 69338

Would you mind telling why you think you need the high stability crystal
?

I have the Icom and did some test the other day and not really sure if
it was changing frequency or if it was the standard I was using. Using
an old Singer service monitor that had warmed up overnight I turned the
Icom on cold (in a room about 65 deg F) checked the frequency around 51
mhz. Went to 80 meters and had about an hour qso on sched on lsb
running full power. Then went back to the same 51 mhz frequency and the
drift was under 200 hz total.

I just can't see paying $ 100 or so for a beter oscillator if the new
ones are really much if any beter.

3406. Icom BC-35 charger & HTX-202 batteries

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-08 00:00:00 UTC
From: "M. Schneider" <markinokla@juno.com>
Message-ID: <s1kO5.8760$2j.4527@newsfeed.slurp.net>
Source record: 69340

I picked up an Icom BC-35 battery charger at a hamfest last Saturday as I heard it and the Icom IC-02AT batteries were compatible with the Radio Shack HTX-202/404 radios & batteries. When I drop in a battery from my 202 and turn it on the charge light goes on briefly and then goes back out. If I slightly "cock" the battery the charge light comes back on and the charger will slow-charge the battery. There are three micro-switches in the bottom of the battery cup and I can hear one of them click when I "cock" the battery. Do the various Icom batteries have encoding holes in the bottom to activate the charger at different rates and does anyone know which of the switches would need to be engaged or disengaged to charge the RS batteries? I figure I can drill indents into the bottom of my batteries so they will charge at the proper rate, but don't want to do any drilling until I know which ones are correct. I know that the Icom battery can be modded to properly fit the 202 but I've got three good RS batteries I don't want to waste.

Thanks,
Mark K5MAR

I would like the same info too!. I know that if I use the large Icom battery with the 202, (I forget the number,) it wont work, because the radio creates too much RF in transmit mode at full power and shuts the radio down. It seems to work just fine with the 404.
Paul

It doesn't take a PHD to run this reliable HT. This model has been in
production since 1986 and is still going strong. Here are the AES
prices on the offered equipment:

FT-23R HT - $149.00
Belt Clip - $7.95
DTMF Adapter - $48.95
Slim Speaker Mic - $30.94
Encoder Option - $24.95
DC adaptor - $ 31.95

Total $293.75

The HT and accessories are in good condition and has a new high watt (12V)
battery.

Price: $155 PLUS shipping costs from 29609 to
your QTH. Has original manual, box, original wall charger.

In good condition. Receiver and transmitter can be extended outside 2m ham
bands for MARS and CAP via simple mods. This radio has NOT been modified.

Cheers,

AL
K4ICL
Paris Mountain

In a mobile installation, one of these other leads would go to the ignition circuit, so that the radio will only work if the vehicle's motor is running (or the key is turned to the aux position). There's sometimes a monitor switch on the "hang-up box" and these radios can also determine if the mic is still hung on the box - and won't transmit if it is.

Peter, you do have a syntor X radio as they did come with 32 channel
scan heads you must
have the switched power leads not connected to the power supply as it
takes more than hooking
up the 10-12 gauge red wire to get the radio working it does have a
switched power leads
made of 16-18 gauge wire with a fuse or fuses on them look for a orange
and green wire
that maybe near the control head end of main harness and double check
for power hook-up
be sure they are loose for power as I can't remember on the X's the
color of switched
wires going of memory here but there is switched power leads that do
need to have 12vdc +
applied to have radio RX and TX.

It doesn't take a PHD to run this reliable HT. This model has been in
production since 1986 and is still going strong. Here are the AES
prices on the offered equipment:

FT-23R HT - $149.00
Belt Clip - $7.95
DTMF Adapter - $48.95
Slim Speaker Mic - $30.94
Encoder Option - $24.95
DC adaptor - $ 31.95

Total $293.75

The HT and accessories are in good condition and has a new high watt (12V)
battery.

Price: $155 PLUS shipping costs from 29609 to
your QTH. Has original manual, box, original wall charger.

In good condition. Receiver and transmitter can be extended outside 2m ham
bands for MARS and CAP via simple mods. This radio has NOT been modified.

Cheers,

AL

Subject: $6 Deal=20

Date: 10-01-2000=20

Poster: Railsplitter

Message=20

A while back, I was browsing these newsgroups, just like you are now,=20

and came across an article similar to this that said you could make=20

thousands of CASH within weeks with only an initial investment of=20

$6.00 plus stamps! So I thought, "Yeah, right, this must be a scam!"=20

But like most of us I was curious and kept reading. It said that if=20

you send $1.00 to each of the 6 names and addresses listed in the=20

article, you could make thousands in a very short period of time. You=20

then place your own name and address at the bottom of the list at #6,=20

and post the article to at least 300 newsgroups. (There are about=20

32,000 of them out there and that's quite a large market pool). No=20

catch, that was it. Even though the investment was a measly $6, I had=20

three questions that needed to be answered before I could get involved=20

in this sort of thing.=20

1. IS THIS REALLY LEGAL?=20

I called a lawyer first. The lawyer was a little sceptical that I would=20

actually make any CASH but he said it WAS LEGAL if I wanted to try it.=20
I told him it sounded a lot like a chain letter but the details of the=20
system (SEE BELOW) actually made it a legitimate legal business.=20
2. IS OK WITH THE POST OFFICE OR IS IT MAIL FRAUD? I called them:=20
1-800-725-2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See 18,=20
h sections1302 NS 1341 of Postal Lottery Laws). This clarifies the=20
program of collecting names and addresses for a mailing list.=20
3. IS IT RIGHT? Well, everyone who sends me a buck has a good chance of=20
getting A LOT of CASH ... a much better chance than buying a lottery=20
ticket!!!=20
So, having these questions answered, I invested EXACTLY $7.92 ... six=20
$1.00 bills and six 32 cent postage stamps ... and boy am I glad I did!=20
Within 7 days, I started getting CASH in the mail! I was shocked! I=20
figured it would end soon and didn't give it another thought. But the=20
CASH continued coming in. In my first week I made between $20 to $30.=20
By the end of the second week I had a made a total of $1,000.00. In the=20
third week I had over $10,000.00 and it was still growing. This is now=20
my fourth week and I have made a total of just over $42,000 and it's=20
still coming in ..... It's certainly worth $6.00 and 6 stamps !!!=20
Also, make sure you print a copy of this article NOW, so you can get=20
the information off of it as you need it. I promise you that if you=20
follow the directions exactly, that you will start making more CASH=20
than you thought possible by doing something so easy!=20
Suggestion: Read this entire message carefully! (print it out or=20
download it.) Follow the simple directions and watch the CASH come in!=20
It's easy. It's legal. And your investment is only $6.00 (plus postage)=20
IMPORTANT: This is NOT a rip-off; it is NOT indecent; it is NOT=20
illegal; and it is virtually no risk - it really works!!!! If all of=20
the following instructions are adhered to, you will receive=20
extraordinary dividends.=20
PLEASE NOTE:=20

Please follow these directions EXACTLY, and $50,000 or more can be=20
yours in 20 to 60 days. This program remains successful because of the=20
honesty and integrity of the participants. Please continue its success=20
by carefully adhering to the instructions. You will now become part of=20
the Mail Order business. In this business your product is not solid and=20
tangible, it's a service. You are in the business of developing Mailing=20
Lists. Many large corporations are happy to pay big bucks for quality=20
lists. However, the CASH made from the mailing lists is secondary to=20
the income which is made from people like you and me asking to be=20
included in that list.=20
Here are the 4 easy steps to success:=20
STEP 1: Get 6 separate pieces of paper and write the following on each=20
piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00=20
bills and place ONE inside EACH of the 6 pieces of paper so the bill=20
will not be seen through the envelope (to prevent thievery). Place one=20
paper in each of the 6 envelopes and seal them. You should now have 6=20
sealed envelopes, each with a piece of paper stating the above phrase,=20
your name and address, and a $1.00 bill. What you are doing is creating=20
a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate=20
service and you are paying for it! Like most of us I was a little=20
skeptical and a little worried about the legal aspects of it all. So I
checked it out with the U.S. Post Office (1-800-725-2161) and they
confirmed that it is indeed legal! Mail the 6 envelopes to the
following addresses:
#1) M. Weber=20
801 Oaklands Dr=20
Round Rock, TX 78681=20
#2) S. Patti=20
1808 Ponderosa St.
Cocoa, Fl.,32926
#3) Gill=20

58 Moross

Mt. Clemens Mi. 48043=20

#4) Ryan Dick

7603 Canyon Dr.

Meridian, ID 83642

#5) Y.S.

2702 A Jenner Dr.

Baltimore, MD 21209

#6) D. Sims

905 Burning Bush Drive

Loganville, GA 30052

step 2: Now take the #1 name off the list that you see above, move the =
other=20

names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number =
6 on=20

the list.

STEP 3: Change anything you need to, but try to keep this article as=20

close to original as possible. Now, post your amended article to at=20

least 300 newsgroups. (I think there are close to 32,000 groups) All=20

you need is 300, but remember, the more you post, the more CASH you=20

make! This is perfectly legal! If you have any doubts, refer to 18=20

Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these=20

steps for yourself and, whenever you need CASH, you can use it again,=20

and again.=20

PLEASE REMEMBER that this program remains successful because of the=20

honesty and integrity of the participants and by their carefully=20

adhering to the directions. Look at it this way. If you are a person=20

of integrity, the program will continue and the CASH that so many=20

others have received will come your way.=20

NOTE: You may want to retain every name and address sent to you,=20

either on a computer or hard copy and keep the notes people send you.=20

This VERIFIES that you are truly providing a service. (Also, it might=20
be a good idea to wrap the $1 bill in dark paper to reduce the risk of=20
mail theft.) So, as each post is downloaded and the directions=20
carefully followed, six members will be reimbursed for their=20
participation as a List Developer with one dollar each. Your name will=20
move up the list geometrically so that when your name reaches the #1=20
position you will be receiving thousands of CASH in CASH!!! What an=20
opportunity for only $6.00 ($1.00 for each of the first six people=20
listed above) Send it now, add your own name to the list and you're in=20
business!=20
---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS=20
Step 1) You do not need to re-type this entire letter to do your own=20
posting. Simply put your cursor at the beginning of this letter and=20
drag your cursor to the bottom of this letter, and select 'copy' from=20
the edit menu. This will copy the entire letter into the computer's=20
memory.=20
Step 2) Open a blank 'notepad' file and place your cursor at the top=20
of the blank page. From the 'edit' menu select 'paste'. This will paste=20
a copy of the letter into notepad so that you can add your name to the=20
list.=20
Step 3) Save your new notepad file as a .txt file. If you want to do=20
your postings in different settings, you'll always have this file to=20
go back to.=20
Step 4) Use Netscape or Internet explorer and try searching for=20
various newsgroups (on-line forums, message boards, chat sites,=20
discussions.)=20
Step 5) Visit these message boards and post this article as a new=20
message by highlighting the text of this letter and selecting paste=20
from the edit menu. Fill in the Subject, this will be the header=20
that everyone sees as they scroll through the list of postings in a=20
particular group, click the post message button.=20

You're done with your first one! Congratulations...THAT'S IT! All you=20
have to do is jump to different newsgroups and post away, after you=20
get the hang of it, it will take about 30 seconds for each newsgroup!=20
**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE=20
MORE CASH YOU WILL MAKE!! BUT YOU HAVE TO POST A=20
minimum of 300**
That's it! You will begin receiving CASH from around the world within=20
days! You may eventually want to rent a P.O.Box due to the large=20
amount of mail you will receive. If you wish to stay anonymous, you=20
can invent a name to use, as long as the postman will deliver it.=20
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.=20
Now the WHY part:=20
Out of 300 postings, say I receive only 7 replies (a very low example).=20
So then I made $7.00 with my name at #6 on the letter. Now, each of the=20
7 persons who just sent me $1.00 make the MINIMUM 300 postings, each=20
with my name at #5 and only 7 persons respond to each of the 7 original=20
7, that is another $49.00 for me, now those 49 each make 300 MINIMUM=20
posts with my name at #4 and only 7 replies each, I will bring in an=20
additional $343.00! Now, those 343 persons turn around and post the=20
MINIMUM 300 with my name at #3 and only receive 7 replies each, I will=20
make an additional $2401.00! OK, now here is the fun part, each of=20
those 2401 persons post a MINIMUM 300 letters with my name at #2 and=20
they each only receive 7 replies, that just made me $16,807.00!!!=20
Those 16807 persons will all deliver this message to 300 newsgroups=20
with my name at #1 and if still 7 persons per 300 Newsgroups react I=20
will receive $117,649.00! With an original investment of only $6.00!=20
And some stamps. AMAZING! When your name is no longer on the list, you=20
just take the latest posting in the newsgroups, and send out another=20
$6.00 to names on the list, putting your name at number 6 again. And=20
start posting again. The thing to remember is: do you realize that=20
thousands of people all over the world are joining the internet and=20

reading these articles everyday? JUST LIKE YOU are now!! So, can you=20
afford $6.00 and see if it really works?? I think so...=20
People have said, "what if the plan is played out and no one sends you=20
the CASH? So what! What are the chances of that happening when there=20
are tons of new honest users and new honest people who are joining the=20
internet and newsgroups everyday and are willing to give it a try?=20
Estimates are at 20,000 to 50,000 new users, every day, with thousands=20
of those joining the actual internet.=20
Remember, play FAIRLY and HONESTLY and this will really work.=20
** By the way, if you try to deceive people by posting the messages=20
with your name in the list and not sending the CASH to the rest of the=20
people already on the list, you will NOT get as much. Someone I talked=20
to knew someone who did that and he only made about $150.00, and that's=20
after seven or eight weeks! Then he sent the 6 $1.00 bills, people=20
added him to their lists, and in 4-5 weeks he had over $10k.=20
This is the fairest and most honest way I have ever seen to share the=20
wealth of the world without costing anything but our time!!! You also=20
may want to buy mailing and e-mail lists for future CASH. Make sure=20
you print this article out RIGHT NOW! Also, try to keep a list of every=20
one that sends you CASH and always keep an eye on the newsgroups to=20
make sure everyone is playing fairly. Remember, HONESTY IS THE BEST=20
POLICY. You don't need to cheat the basic idea to make the CASH!! GOOD=20
LUCK to all and please play fairly and reap the huge rewards from this,=20
which is tons of extra CASH.=20
Please remember to declare your extra income. Thanks once again...=20
"People have asked me if this is really legal. Well, it is! You are=20
using the Internet to advertise your business. What is that business?=20
You are creating a mailing list of people who are interested in home=20
based computer and online business and methods of generating income at=20
home. Remember, people send you a small fee to be added to your mailing=20
list. It is legal. what will you do with your list of thousands of=20

names?=20

That's up to you." So, build your mailing list, keep good accounts,=20

declare the income and pay your taxes. By doing this you prove your=20

business intentions. Keep an eye on the newsgroups and when the cash=20

has stopped coming (that means your name is no longer on the list),=20

you just take the latest posting at the newsgroups, send another $6.00=20

to the names stated on the list, make your corrections (put your name=20

at #6) and start posting again.=20

NOTES:=20

*1. In some countries, the export of the country's exchange is illegal.=20

But you can get the license to do this from the post office, explaining=20

the above statements (that you have an online business, etc. You may=20

have to pay an extra tax, but that's OK, the amount of the incoming=20

CASH is HUGE! And as I said, a few countries have that restriction.=20

*2. You may want to buy mailing and e-mail lists for future CASH. (Or=20

Database or Spreadsheet software.)=20

*3. If you're really not sure or still think this can't be for real,=20

please print a copy of this article and give it to someone who really=20

needs the CASH, and see what happens.=20

*4. You will start getting responses within 1-2 weeks, it depends.=20

ALSO REMEMBER=20

SEND YOUR $1 OUT TO EVERYONE ON THE LIST,=20

EVEN IF THEY ARE NOT FROM THE U.S.=20

WHAT ARE YOU WAITING FOR???=20

$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!=20

GOOD LUCK!!!=20

Message

A while back, I was browsing these newsgroups, just like you are now, =

and came across an article similar to this that said you could make =

thousands of CASH within weeks with only an initial investment of =

$6.00 plus stamps! So I thought, "Yeah, right, this must be a scam!" =

But like most of us I was curious and kept reading. It said that if =

you send $1.00 to each of the 6 names and addresses listed in the =

article, you could make thousands in a very short period of time. You =

then place your own name and address at the bottom of the list at #6, =

and post the article to at least 300 newsgroups. (There are about =

32,000 of them out there and that's quite a large market pool). No =

catch, that was it. Even though the investment was a measly $6, I had =

three questions that needed to be answered before I could get =
involved

in this sort of thing.

1. IS THIS REALLY LEGAL?

I called a lawyer first. The lawyer was a little sceptical that I =
would

actually make any CASH but he said it WAS LEGAL if I wanted to try =
it.

I told him it sounded a lot like a chain letter but the details of =
the

system (SEE BELOW) actually made it a legitimate legal business.

2. IS OK WITH THE POST OFFICE OR IS IT MAIL FRAUD? I called them: =

1-800-725-2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See 18, =

h sections1302 NS 1341 of Postal Lottery Laws). This clarifies the =

program of collecting names and addresses for a mailing list.

3. IS IT RIGHT? Well, everyone who sends me a buck has a good chance =
of

getting A LOT of CASH ... a much better chance than buying a lottery =

ticket!!!

So, having these questions answered, I invested EXACTLY $7.92 ... six =

$1.00 bills and six 32 cent postage stamps ... and boy am I glad I =
did!

Within 7 days, I started getting CASH in the mail! I was shocked! I =

figured it would end soon and didn't give it another thought. But the =

CASH continued coming in. In my first week I made between $20 to $30. =

By the end of the second week I had a made a total of $1,000.00. In =
the

third week I had over $10,000.00 and it was still growing. This is =
now

my fourth week and I have made a total of just over $42,000 and it's =

still coming in ..... It's certainly worth $6.00 and 6 stamps !!! =

Also, make sure you print a copy of this article NOW, so you can get =

the information off of it as you need it. I promise you that if you =

follow the directions exactly, that you will start making more CASH =

than you thought possible by doing something so easy!

Suggestion: Read this entire message carefully! (print it out or

download it.) Follow the simple directions and watch the CASH come =
in!

It's easy. It's legal. And your investment is only $6.00 (plus =
postage)

IMPORTANT: This is NOT a rip-off; it is NOT indecent; it is NOT

illegal; and it is virtually no risk - it really works!!!! If all of =

the following instructions are adhered to, you will receive

extraordinary dividends.

PLEASE NOTE:

Please follow these directions EXACTLY, and $50,000 or more can be =

yours in 20 to 60 days. This program remains successful because of =
the

honesty and integrity of the participants. Please continue its =
success

by carefully adhering to the instructions. You will now become part = of

the Mail Order business. In this business your product is not solid = and

tangible, it's a service. You are in the business of developing = Mailing

Lists. Many large corporations are happy to pay big bucks for quality =

lists. However, the CASH made from the mailing lists is secondary to =

the income which is made from people like you and me asking to be =

included in that list.

Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on = each

piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US = $1.00

bills and place ONE inside EACH of the 6 pieces of paper so the bill =

will not be seen through the envelope (to prevent thievery). Place = one

paper in each of the 6 envelopes and seal them. You should now have 6 =

sealed envelopes, each with a piece of paper stating the above = phrase,

your name and address, and a $1.00 bill. What you are doing is = creating

a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate =

service and you are paying for it! Like most of us I was a little =

skeptical and a little worried about the legal aspects of it all. So = I

checked it out with the U.S. Post Office (1-800-725-2161) and = they

confirmed that it is indeed legal! Mail the 6 envelopes to the

following addresses:

#1) M. Weber

801 Oaklands Dr

Round Rock, TX 78681

#2) S. Patti

1808 Ponderosa St.

NOTE: You may want to retain every name and address sent to you,

either on a computer or hard copy and keep the notes people send you. =

This VERIFIES that you are truly providing a service. (Also, it might =

be a good idea to wrap the $1 bill in dark paper to reduce the risk =
of

mail theft.) So, as each post is downloaded and the directions

carefully followed, six members will be reimbursed for their

participation as a List Developer with one dollar each. Your name =
will

move up the list geometrically so that when your name reaches the #1 =

position you will be receiving thousands of CASH in CASH!!! What an =

opportunity for only $6.00 ($1.00 for each of the first six people =

listed above) Send it now, add your own name to the list and you're =
in

business!

---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS

Step 1) You do not need to re-type this entire letter to do your own =

posting. Simply put your cursor at the beginning of this letter and =

drag your cursor to the bottom of this letter, and select 'copy' from =

the edit menu. This will copy the entire letter into the computer's =

memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top =

of the blank page. From the 'edit' menu select 'paste'. This will =
paste

a copy of the letter into notepad so that you can add your name to =
the

list.

Step 3) Save your new notepad file as a .txt file. If you want to do =

your postings in different settings, you'll always have this file to =

go back to.

Step 4) Use Netscape or Internet explorer and try searching for

various newsgroups (on-line forums, message boards, chat sites,

discussions.)

Step 5) Visit these message boards and post this article as a new =

message by highlighting the text of this letter and selecting paste =

from the edit menu. Fill in the Subject, this will be the header

that everyone sees as they scroll through the list of postings in a =

particular group, click the post message button.

You're done with your first one! Congratulations...THAT'S IT! All you =

have to do is jump to different newsgroups and post away, after you =

get the hang of it, it will take about 30 seconds for each newsgroup! =

**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE

MORE CASH YOU WILL MAKE!! BUT YOU HAVE TO POST A

minimum of 300**

That's it! You will begin receiving CASH from around the world within =

days! You may eventually want to rent a P.O.Box due to the large

amount of mail you will receive. If you wish to stay anonymous, you =

can invent a name to use, as long as the postman will deliver it. =

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part:

Out of 300 postings, say I receive only 7 replies (a very low =
example).

So then I made $7.00 with my name at #6 on the letter. Now, each of =
the

7 persons who just sent me $1.00 make the MINIMUM 300 postings, each =

with my name at #5 and only 7 persons respond to each of the 7 =
original

7, that is another $49.00 for me, now those 49 each make 300 MINIMUM =

posts with my name at #4 and only 7 replies each, I will bring in an =

additional $343.00! Now, those 343 persons turn around and post the =

MINIMUM 300 with my name at #3 and only receive 7 replies each, I =
will

make an additional $2401.00! OK, now here is the fun part, each of =

those 2401 persons post a MINIMUM 300 letters with my name at #2 and =

they each only receive 7 replies, that just made me $16,807.00!!! =

Those 16807 persons will all deliver this message to 300 newsgroups =

with my name at #1 and if still 7 persons per 300 Newsgroups react I =

will receive $117,649.00! With an original investment of only $6.00! =

And some stamps. AMAZING! When your name is no longer on the list, =
you

just take the latest posting in the newsgroups, and send out another =

$6.00 to names on the list, putting your name at number 6 again. And =

start posting again. The thing to remember is: do you realize that =

thousands of people all over the world are joining the internet and =

reading these articles everyday? JUST LIKE YOU are now!! So, can you =

afford $6.00 and see if it really works?? I think so...

People have said, "what if the plan is played out and no one sends =
you

the CASH? So what! What are the chances of that happening when there =

are tons of new honest users and new honest people who are joining =
the

internet and newsgroups everyday and are willing to give it a try? =

Estimates are at 20,000 to 50,000 new users, every day, with =
thousands

of those joining the actual internet.

Remember, play FAIRLY and HONESTLY and this will really work.

** By the way, if you try to deceive people by posting the messages =

with your name in the list and not sending the CASH to the rest of =
the

people already on the list, you will NOT get as much. Someone I =
talked

to knew someone who did that and he only made about $150.00, and =
that's

after seven or eight weeks! Then he sent the 6 $1.00 bills, people =

added him to their lists, and in 4-5 weeks he had over $10k.

This is the fairest and most honest way I have ever seen to share the =

wealth of the world without costing anything but our time!!! You also =

may want to buy mailing and e-mail lists for future CASH. Make sure =

you print this article out RIGHT NOW! Also, try to keep a list of =
every

one that sends you CASH and always keep an eye on the newsgroups to =

make sure everyone is playing fairly. Remember, HONESTY IS THE BEST =

POLICY. You don't need to cheat the basic idea to make the CASH!! =
GOOD

LUCK to all and please play fairly and reap the huge rewards from =
this,

which is tons of extra CASH.

Please remember to declare your extra income. Thanks once again... =

"People have asked me if this is really legal. Well, it is! You are =

using the Internet to advertise your business. What is that business? =

You are creating a mailing list of people who are interested in home =

based computer and online business and methods of generating income =
at

home. Remember, people send you a small fee to be added to your =
mailing

list. It is legal. what will you do with your list of thousands of =

names?

That's up to you." So, build your mailing list, keep good accounts, =

declare the income and pay your taxes. By doing this you prove your =

business intentions. Keep an eye on the newsgroups and when the cash =

has stopped coming (that means your name is no longer on the list), =

you just take the latest posting at the newsgroups, send another =
$6.00

to the names stated on the list, make your corrections (put your name =

at #6) and start posting again.

NOTES:

*1. In some countries, the export of the country's exchange is =
illegal.

But you can get the license to do this from the post office, =
explaining

the above statements (that you have an online business, etc. You may =

have to pay an extra tax, but that's OK, the amount of the incoming =

CASH is HUGE! And as I said, a few countries have that restriction. =

*2. You may want to buy mailing and e-mail lists for future CASH. (Or =

Database or Spreadsheet software.)

*3. If you're really not sure or still think this can't be for real, =

please print a copy of this article and give it to someone who really =

needs the CASH, and see what happens.

*4. You will start getting responses within 1-2 weeks, it depends. =

ALSO REMEMBER

SEND YOUR $1 OUT TO EVERYONE ON THE LIST,

EVEN IF THEY ARE NOT FROM THE U.S.

WHAT ARE YOU WAITING FOR???

$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!

GOOD LUCK!!!

LONDON (Reuters) - Actor John Thaw loved playing Britain's Inspector Morse on television because the grumpy detective was no Sherlock Holmes and kept getting things wrong.

Thaw's 13-year-old portrayal, which has been a worldwide hit, ends next week with the final Morse episode and the death of the curmudgeonly sleuth.....

I was reading your instructions. Sounds like a great idea. Question: I have a labtec computer phone/boom mic combo. The ends are in 2 plugs. The headset plug is obvious & works in the radio as is. The mic plug is a stereo 1/8" phone. Why the need for three wires? I get the need for a mic & ground, but what's the third for? Is this for the 5VDC source spoken of in this thread? I am also lost as to why that might be needed. Ideas on the actual pin config?

Thanks & forgive me if I am being thick...

Dan

Hallo Jan,

Mijn naam is dennis, en ik denk (hoop) dat je nederlander bent gezien je achternaam.
Ik heb de gewenste modificatie voor uitbreiding hier bij me en ik denk dat het precies is wat je zoekt.
De modificatie is beschreven in het duits en is afkomstig uit duitsland.
Hij is gemaakt door DB2FM & DB0GV

Frequentiebereik:
Op de SW unit F2822101 bevinden zich twee Bruggen, R02 en R03.
In de DL versie is brug R02 0 Ohm (opdruk 000), Met deze brug erin is het bereik 144 tot 146 MHz.
Als je de weerstand eruitn soldeert en op de plaats van R0-3 zet, wordt het bereik 144 tot 148 (USA) MHz.
Als je ze beiden dus R02 en R03 weg laat dan wordt het pas echt interesant, want dan wordt het frequentiebereik....140.000 tot 150.000 MHz.
Met als kanttekening dat het bereik zowel onder als boven ongeveer 140 KHz te weinig is.
De uitlezing houd hier echter geen rekening mee.
Als je er een transverter achter wilt zetten dan werkt het prachtig....
Mocht je het willen dan kun je de modificatie natuurlijk ook omschakelbaar maken door een driedraads aansluiting op de print te solderen en een schakelaartje achter op de ft290 te zetten.

Mocht je nog meer modificaties willen hebben dan moet je maar een mailtje sturen, dan scan ik het in en stuur het door...
Ik heb het vroeger namelijk al eens uitgeprint en de BBS waar ik het vandaan heb is niet meer in de lucht.
Meerdere info is denk ik nog steeds te halen uit diverse packet BBSen dus kijk maar eens rond.
73's en sucses

I inquired about this at AVVID, and was told that that is normal behavior
for older model TS-850 radios. Clif told me that there was no fix, and to
think of it along the lines of, "...waiting for the tubes to warm up."
Minor inconvenience for such a great radio!

Hi, Kirb

I'm confused!

Aubrey Stewart is telling me that you told him that you like your
Kachina so much that you are thinking of ordering another one. Yet, I
see your email here. <:}

He says that you reseated PC401C and your "crackles" went away.

I have discovered the same problem here, and also that the effect varies
with the sidetone level setting. Aubrey is checking further there and
will let me know if they can duplicate the problem. He claims that you
and I are the only two to ever report it. He has offered to send a new
PC401C module.

So, bring me up to date - are you really still trying to sell your 505?
IF so, you have a really attractive price on it.

3456. Help Trouble info on an ALDA 103 xcvr

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-09 04:00:36 UTC
From: 31mike@my-deja.com
Message-ID: <8ud7h2$u00$1@nnrp1.deja.com>
Source record: 69261
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I have a question for the group.

I have been working on an old ALDA 103 Ham tranceiver. It works
just fine except the RIT is on all the time no matter which position the
on/off RIT switch is in.
I have verified that the switch itself is good and not broken.
The manual refers that when the switch is operated it grounds one
of a pair of diodes and causes the RIT capacitor to go in or out of the
vfo circuit and visa versa. The two diodes that it refers to are D601
and D602. I can not find these in the schematics (for the vfo board) or
other associated circuits and schematics.
When I physically look at the vfo board itself it appears that
there is a small reed relay on the board and when this switch is
operated this relay is operated to switch the RIT cap in and out? visa
versa.
Is it possible that there was a mod to this transceiver to add this
relay and not use diodes? Or were the reed relays first and they removed
them and added the diodes?? It would be nice to get this guy running
properly.
Thanks for any trouble shooting suggestions or pointing me in the
right direction.

Jack

3459. Johnson Ranger Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-09 05:27:33 UTC
From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <9BqO5.110587$i5.8322@news2.mts.net>
Source record: 69264

I own two Johnson Rangers, both of which have been totally restored and operate perfectly. However, one of the units has always had a problem which concerns me. The problem is arcing at the "OPERATE" switch whenever one is going in or coming out of the "PHONE" and "CW" positions - in other words, whenever B+ voltage is applied to the tubes.

This "spitting", which can be heard (and seen when it is dark), always occurred with the one Ranger, even after it was totally restored. However, the other unit is and always has been absolutely void of this problem. Both units have the CW Keyer board and PTT modifications - and are identical, as best I can tell, in every way.

Does anyone have anything to suggest with respect to the cause of this arcing and what might be done to extinguish it?

Incorrect. I have replaced the bulbs in the DR-110 and it is fact a backlit
LCD panel with a plastic colored lens behind it which gives the display it's
orange color. No bulbs, and the LCD goes black... Replace the bulbs, it's a
nice bright orange readout again.

Kenwood says 9.0 +- 0.05v measured at TP-6, controled by VR4. Also you might want to check the 3.6V. Pin 5, connector 9, controled by VR3. Should be 3.6v +- 0.05v. MK

Group;
Looking for the sche-magic for a Kenwood MC44DM handmike, that's the teardrop-shaped one that preceeded the current unit on most Kenwood mobile VHF/UHF units.. Mine seems to have developed a knack of sticking in transmit when keyed up and a DTMF key is pressed, requiring you to turn off the radio to unkey... Works ok if no DTMF key is pressed.

Would like to try to fix this, rather than buying a new mike....

'Severe' solar storm zaps Earth
By LEE BOWMAN
Scripps Howard News Service
November 09, 2000

- The sun has welcomed the crew of the International Space Station Alpha to the neighborhood with one of the most powerful solar radiation storms in a quarter-century, but NASA officials say the men are in no danger.

The storm, rated "severe" on the government's space weather scales, produced radiation levels Wednesday and Thursday that could rise to more than the equivalent of 10 chest X-rays for passengers on jets flying nearer Earth's poles, and higher still for astronauts orbiting beyond Earth's protective atmosphere.

The event, which is expected to gradually subside over the weekend, could also adversely affect some satellite operations and will likely disrupt radio communication at high latitudes.

"This is a pretty dramatic event, with some very high fluxes at very high energies. It's what we'd call a 'hard' event in terms of these energy levels,'' said Joe Kunches, a senior forecaster at the Space Environment Center in Boulder, Colo., part of the National Oceanic and Atmospheric Administration.

Russian flight controllers for Alpha have asked station commander Bill Shepherd to set up a radiation-monitoring device inside Russian-built crew modules as a precaution.

Rob Navias, a spokesman for the National Aeronautics and Space Administration, said similar devices are used during each space shuttle mission and will sound an audible alarm if radiation reaches a preset level.

Were that to happen, the crew would move to the end of the Zvezda service module near where the Soyuz spacecraft is docked, since that part of the space station offers the most protection.

"Even if it reaches levels that would trigger that alarm, the flare would have no impact to crew health or crew safety," Navias said.

Kunches said only three other storms of this strength have been logged since instruments started recording space weather data in 1976. NASA records indicate that a space mission with a human crew was under way during only one of these storms, an October 1989 flight of the Space Shuttle Atlantis, which caused no ill effects for the crew.

The event, caused by a group of sunspots that are now near the sun's horizon, is expected to also increase geomagnetic activity and boost the visibility of the northern lights to high intensity, making them visible over much of the northern United States by Saturday.

Scientists expect only three storms of this strength to take place during each 11-year solar cycle. Another, slightly stronger storm, already erupted in July. The current cycle of solar activity is now near its peak.

The line in, line out, speaker out, all use tip - left, ring - right,
and Sleeve Ground (common).

Cards that have Stereo in on the mic use the same. Most simply common the
tip and ring. MONORAL Mic's Generally come with the ring and tip commoned
together. That is how the lab tec I used was wired.

3495. Re: Question on jungle radio for nature conservation project

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-10 02:18:09 UTC
From: Richard Ferguson <raferguson@att.net>
Message-ID: <3A0B5B7A.3E687E16@att.net>
Source record: 69298

The best frequency range for this use would be around 3 to 10 mhz, most likely, depending on the time of day. A horizontal wire dipole antenna will send the radio waves straight up to the ionosphere, and is conveniently cheap and easy to string through the trees. (Technically an NVIS antenna). We use 4 MHz for a radio net that covers Colorado fairly well. Higher frequencies or vertical whip antennas will have more of a tendency to skip too far, so favor distance rather than shorter distances. SSB would be the way to go.

27 MHz would probably not work unless the villages were more or less line of sight, unlikely in a mountainous region.

Depending on the exact topography, a beam antenna in the 150 MHz range might work between two villages, but you would probably need a beam at each end aimed at each other, or both aimed at the same mountain! (using a mountain as a reflector). If you have several villages that all need to talk, forget it, too complicated.

Hi:

If you are looking for some Blank Logic Boards
to upgrade/repair your Maxtrac/Radius Mobile, I
have 4 of them which are from a service shop that
are ready to go and in the Anti-Static bag.

All one has to do, is remove the OLD board, reinstall
the New One, reinitialize the the radio with Normal
RSS, and one can upgrade their radio even to 32 channels !!
Has the 32 channel firmware already installed.

$135.00ea+$8.00 for shipping and handling

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate
shipping is desired) or a Personal / Business check is A-OK too if you do not
mind a Short Shipping Delay due to bank processing time. This is required only
the first time or two as once you are in the data base, PrePayment is no longer
required

Hi Guys;
My friend once owned a 2-way radio repair shop and asked me to see if any one out there needed any Motorola "Vibrasenders" And "Vibrasponders". I have a bunch to unload, about 20 sets and some "loosies"
If you need 'em, we'll talk. Heres what some of them they look like>>

There are several mini incandescent bulbs soldered to the display board which light up all of the buttons, LCD panel, etc. They are not hard to replace if you are any good at working with very small leads and circuit solder points.

However, you will probably discover that the two bulbs which light the display unit will have melted themselves into the clear back plate of the display. This will make getting the LCD panel off from the board a little difficult unless you cut the leads from the bulbs first. Once you have the display panel apart, you can remove the backing plate and use a small drill to clean up the holes where the bulbs mount, so that the new bulbs will go in properly.

If this sounds like too much for you, you can send it into Alinco, they will replace all of the front panel lighting for around $60.00 if I remember right.

Good luck and 73 de W6DKN

Can you see the arc when it's dark? Seems to would get you pretty close.
Hard to say... Almost sounds like a bad switch, or it's arcing to
ground. That is, unless it's in the final section. Does it arc
continuously after B+ is turned on, or does it just spit once and quit?
I'd try to visually see the arc. You may see a little burnt spot where
the atrc is once you get close. MK

Kenwood says 9.0 +- 0.05v measured at TP-6, controled by VR4. Also you might want to check the 3.4V. Pin 5, connector 9, controled by VR3. Should be 3.6v +- 0.05v. MK

If you are familiar or know someone who is familiar with computer
networking, make a standard network cable, or goto your local rat
shack and purchase one. Either a coupler will work between cables or
you can put a wiring block on one end and mount this in your car to
plug the mic into.... This worked very slick for me, and I now use it
in the shack as well on my Icom's

Source record: 69359

This is a Tube Checker that checks continuity of a tubes filament. If the filament is open the Tube Checker lamp will not light and the tube will not work. If the filament is good the lamp will light - simple. It will check most common tubes used in guitar amplifiers (12AX7's, 6L6's, 5U4's, 5Y3's, 5881's.....) tube radios, old phonographs, and if you're unfortunate enough to still have a tube type television, it will do those as well. This little Tube Checker also has a set of attached test leads that can be used to check circuit continuity. A guitarist/musician may find this feature a handy addition to the gig bag for checking guitar or audio cables, fuses, etc.

Thomas Edison describes in his patent application for the wireless telegraph in May of 1885 as follows;
For receiving signals I locate in said circuit between condensing surface and the ground a diaphragm sounder which is preferably one of my electro motograph telephone receivers.

The first wireless telegraph picked up the telegraph signals with a loud speaking telephone. De Forest patented his triode in 1907 twenty two years later. For his first radio he used an Edison loud speaking telephone.

Edison's Patent and an essay about wireless transmission can be seen on my site at www.geocities.com/starapex Click on the radio

Hi all
The radio shack head set is actually a Koss head set, which may be someone elses who knows.Anyway I picked one up from radio shack for 39.95 and tried it as it came out of the box on my Yaesu FT-920, and reports are good.I did have to tailor the audio a little with the 920's DSP mic equilizer.But a seemingly good head set for a modest price.
Good luck 73 Rob KG4GGX

Hi:

If perhaps you have some of these Active Tone Filters (used in the older series HT440's, HT90's MT500's and MX's I can turn these older series NFN6010's into some Christmas CASH for you. I need 5-10 of them, and will be willing to pay a fair and resonable price, and even will send a Self Addressed Envelope too.

Or if you are of the trading type, I have lots of Motorola goodies in the warehouse.

Please take a look into that old box of Elements, Tone Filters, and see if you have any of these.

Monty

I have for sale in very good condition a Yaesu SP-5 with the Timewave DSP-59Y
audio noise reduction filter.......I will take $300 plus shipping in the 48
only and
can be reached at (508) 821-2993 or e-mail........WZ1U Steve / Lakeville, Ma.

3538. Radio Shack HTX 242

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-11 02:07:01 UTC
From: kc2dwp@aol.com
Message-ID: <20001110210701.11172.00001724@ng-cg1.aol.com>
Source record: 69240

Greetings:

There was a recent post from a ham experiencing problems with transmit on an HTX 242. I have the same problem and it seems to appear after extended periods of use (transmit and receive). The unit will lockup on transmit and need to be shut down to be released or the unit won't transmit when the mic is keyed. Any thoughts or ideas would be appreciated.

Thanks,
Joe - KR2V

>Philip Neidlinger

I took a look at the IC-2100H and the FT-1500M, as well as the reviews
of both on eham.net. I ended up getting the FT-1500M (and its about
$20 cheaper than the IC2100H), and I'm VERY happy with it so far; not
a single problem.

Ye gods and little fishes!...what's all this crap about 3 - 4 mHz? and SSB, and 27 mHz?, and bouncing VHF off of mountains!! (good god!), etc. They're only talking about 35 - 40 mile ranges right?, in a country with high mountains?...so stick a vhf solar powered battery repeater on a mountain top and little solar/battery sets in the villages. What's so hard about this? I thought you guys were hams...gee...

I have a Kenwood TS440 and the S meter lamp is burned out, so I have a hard time seeing the meter in low light. Has anyone replaced that bulb, and how hard is it to get to? How much of the radio do you have to take apart, and what type of bulb is needed to replace the bad one? Is there more than one bulb or is the S meter lamp the only one? Thanks for the help.
73,
John

Hi, How do you like the receiver quality on that radio? I've never used one. I'm kinda in the market for a new mobile rig, and had looked at the 706's, but the price on those alinco's pretty good. Curious, why you are selling so fast...If you still have it I might be interested. I had looked at the radio shack version, but their's only 10w on six. So 100w would be better. Does it have provision for adding a cw filter? Say along the lines of 500 hz? I'll look into their web site to check the specs and a picture. Dunno, I might give one of those a shot..Let me think about it a bit. MK

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:

Looking to buy an inexpensive but operational 2 meter or 440 FM amateur handi-talkie or mobile. It need not look pretty but must be fully functional. Prefer units from the late 1970s or early 1980s.
Am assisting a ham friend in relocating and wish to provide two way communications as we caravan across the country.
More modern synthesized units also ok however I am hoping to keep the cost down for this project.
Thanks!

Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.packet,rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Hi, At the same question, Kantronics answer that : (be carreful it's a little bit long but i don't know if i can join a file here...)

73' Christophe - F1BDQ

Version 8.2 Firmware Update
Firmware Update Version 8.2 adds advanced digipeating capabilities for GPS/APRS operations by adding four new commands for digipeating--UIDIGI, UIFLOOD, UITRACE, and UIDWAIT--and adding UIGATE to control cross-band digipeating for the Kam Plus, Kam, KPC-9612 Plus and KPC-9612. See the GPS/APRS discussion below. In addition, 8.2 versions for the KPC-3 and KPC-9612 are upgraded so that their command sets are more like those for the KPC-3 Plus and KPC-9612 Plus. For example, MODEM mode has been added so you'll be able to copy the NWS EMWIN weather broadcasts. See description of EMWIN below.
If you've skipped over one or more of last year's upgrades for your TNC, don't be concerned; 8.2 firmware incorporates the major features of the previous upgrades. The Version 8.2 Firmware Upgrade Manual Addendum, shipped with the firmware, includes a full description of the new digipeater commands and commands modified or combined with other commands since the last update.
Since documentation is not included for previous updates, KPC-3 and KPC-9612 owners might wish to purchase our newly written KPC-3 Plus and KPC-9612 Plus manuals which incorporate material from previous updates and are a great reference source. These manuals contain over 280 pages of information, including 60 pages of operational information on the various VHF/UHF digital modes, an 80 page Command Reference, and an extensive index. The operational chapter includes sections on the following: the packet mode of operation, remote access to your TNC, the packet personal mailbox (PBBS), working with a full service BBS to forward messages, GPS interfacing, the KA-Node networking system, WEFAX (for KPC-3 and KPC-3 Plus), the NEW EMWIN mode, KISS mode (for TCP/IP operation), and DAMA mode (the European node system mode).
Since the Version 8.2 update is not available for KPC-2, KPC-4, or KPC-2400 owners (due to their limited memory space), this may be an ideal time to consider the purchase of a new KPC-3 Plus or KPC-9612 Plus. Advanced GPS/APRS Digipeating: Amateurs are using GPS receivers, a packet unit, and an FM transmitter to report the location of their vehicles or stations to others. Their broadcasts use one-way (unproto UI) packets, to report call sign, latitude and longitude. Packet stations hearing these broadcasts may display the positional information, often using map-based programs such as APRS. To extend the range of reporting, it has become common practice for the mobile stations to use digipeat paths containing generic digipeater

names, such as RELAY and WIDE. Using these names (aliases), there is no need to recall and enter specific call signs during a trip.
In response to requests from many GPS and APRS enthusiasts to more fully support "generically named" digipeater activities, we've added four digipeater commands to the 8.2 firmware, that provide alternative ways in which to digipeat using generic call signs. First, the UIDIGI command allows up to four additional digipeater aliases and supports a swap of MYCALL for the alias name during digipeating. Second, the UIFLOOD command adds the ability of the TNC to digipeat several times, frames that contain only one digipeater address, such as WIDE3-3. Here, the ssid (-3) is decremented each time the frame is digipeated and each TNC digipeats such a frame only once. UITRACE does the same but adds the digipeaters MYCALL address to each outgoing frame, creating a return-path record, a "trace."
For You Techies out there, here's a brief description of each new digipeating command:
UIDIGI ON [+|-] call1[,call2[,call3[call4]]]
Up to four call signs can be specified for special digipeater duty. If any of the UIDIGI calls appears in the to-be-digipeated field of a UI packet, and if MYCALL does not appear in the source field or any of the has-been-digipeated fields, the UIDIGI call in the to-be-digipeated field will be replaced by MYCALL with the H bit set and the packet will be digipeated.
UIFLOOD name, n, [ID|NOID] (n=0-255)
When a UI frame is received with a call in the to-be-digipeated field of the form name'x-y (e.g. WIDE'3-3), the ssid is decremented and the UI frame is digipeated without the H bit set if such a packet has not been "seen" for the last n seconds. If the optional ID parameter is set, the MYCALL is placed in an additional digipeater field with the H bit set.
UITRACE name ,n (n=0-255)
This command is similar to UIFLOOD except that the MYCALL is inserted as a has-been digipeated address. Thus digipeated frames grow in duration as they are digipeated several times.
UIDWAIT
When OFF, digipeaters retain first channel access. When ON, digipeaters must compete with normal packets for channel access (using PERSIST).
NWS EMWIN Broadcasts: The NWS Emergency Managers Weather Information Network (EMWIN) is a wireless, direct-to-computer information service that the National Weather Service (NWS) provides with help from the Federal Emergency Management Agency. The NWS feeds a constant stream of weather information (@ 1200,8,N,1), from around the world, to a satellite orbiting the Earth. Many cities are coming on line now to capture this stream and rebroadcast it on fixed VHF FM frequencies., usually just above the 2-meter amateur band, tunable with most rigs. With an FM receiver or scanner, a KPC-3, KPC-3 Plus, KPC-9612, KPC-9612 Plus, KAM Plus, or KAM with Enhancement Board, and PC with communications software, you can copy these broadcasts. The content of the broadcasts may be plain ASCII text (copyable with Pacterm - shipped with Kantronics TNCs) or graphics (copyable with "WeatherNode" software, stocked for sale by Kantronics).
To copy the broadcasts, simply cable together the equipment mentioned above, tune your VHF FM receiver to the local EMWIN frequency, set the KPC

interface command to MODEM, and follow the text on your PC screen.
Please be sure to select the right KPC model(s) for your update(s); the
EPROMS (firmware) are not interchangable.

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Would like to trade one Yaesu FT 920 HF + 5-MHZ All Mode Transceiver for
One Yaesu FT 847 All Mode Transceiver.

FT 920 - HF + 6M;100w;AF-DSP;Auto Antenna Tuner; 127 memories;FET RF
Amp;Digital Voice Recorder; Dual Display;Dual VFO;Keyer,MH 31 Hand Mic;
Manual;orignal cartons/packing.

The unit is in new condition. Used for 4 years replaced with Mark V.

I live in Washington state. I don't really want to ship this radio unless I
have no choice. I am open to driving a few hundred miles to swap.

Please respond direct to w7mic@msn.com
Mike w7mic.

3565. Firestick 2000 antenna as all bander?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-12 00:00:00 UTC
From: Dan Hayman <DanHayman@Accomplishments.com>
Message-ID: <pKAP5.11276$U4.574585@newsread1.prod.itd.earthlink.net>
Source record: 69162

Has anybody any experience with using the Firestick 2000 10/11 meter antenna as a multi-band mobile antenna (with a tuner) used on an RV (mounted on the ladder in back and sticking about 18" above the rubber roof)? A friend of mine has made the suggestion as this is an inexpensive top loaded/radiating antenna.

Thanks & 73's

Dan

Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.swap

It doesn't take a PHD to run this reliable HT. This model has been in production since 1986 and is still going strong. Here are the AES prices on the offered equipment:

FT-23R HT - $149.00
Belt Clip - $7.95
DTMF Adapter - $48.95
Slim Speaker Mic - $30.94
Encoder Option - $24.95
DC adaptor - $ 31.95

Total $293.75

The HT and accessories are in good condition and has a new high watt (12V) battery.

Price: $155 PLUS shipping costs from 29609 to your QTH. Has original manual, box, original wall charger.

In good condition. Receiver and transmitter can be extended outside 2m ham bands for MARS and CAP via simple mods. This radio has NOT been modified.

Cheers,

AL

It's not for the faint of heart but not hard either. There is only one (1)
bulb.

Remove the top and bottom covers.
Tilt the front panel forward from the main chassis.
Remove the VOX switch
Replace the bulb and put everything else back in place.

M. Schneider (markinokla@juno.com) wrote:
: I picked up an Icom BC-35 battery charger at a hamfest last Saturday as I
: heard it and the Icom IC-02AT batteries were compatible with the Radio Shack
: HTX-202/404 radios & batteries. When I drop in a battery from my 202 and
: turn it on the charge light goes on briefly and then goes back out. If I
: slightly "cock" the battery the charge light comes back on and the charger
: will slow-charge the battery. There are three micro-switches in the bottom
: of the battery cup and I can hear one of them click when I "cock" the
: battery. Do the various Icom batteries have encoding holes in the bottom to
: activate the charger at different rates

Yep, 3 square holes are molded into the bottom of the battery case;a metal
plate goes over these, with holes punched through the metal as needed.

: and does anyone know which of the switches would need to be engaged or
: disengaged to charge the RS batteries?

You might want to contact ICOM.
BUT-NOTE:the ICOM packs rely on a thermal cut-out that the ICOM packs
have, but the Radio Shack ones may(or may not)have-I don't know.
If they don't have it, the ICOM charger WILL overcharge the Radio Shack
packs.

: I figure I can drill indents into the bottom of my batteries so they will
: charge at the proper rate,

Yes, you can, but see above

: but don't want to do any drilling until I know
: which ones are correct. I know that the Icom battery can be modded to
: properly fit the 202 but I've got three good RS batteries I don't want to
: waste.

: Thanks,
: Mark K5MAR

3622. Better Receiver than IC-765?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-13 00:00:00 UTC
From: Paul Knight <paul.knight@prairiecomm.com>
Message-ID: <8upe6rshe1@bob.news.rcn.net>
Source record: 69117

Hello! How much would one have to spend these days to find a better performing receiver than that in the Icom IC-765? Even though it is ten years old now, I'm not seeing much new gear with better RF performance specs. More bells and whistles, sure, but not better RF performance.

Thanks for any input,

Paul WD8DKY

Dean,

You can use the schematic for the IM-18 for troubleshooting. The meters were electrically identical, just placed in different cases with a larger meter movement in the IM-25.

```
------------------UPDATE----------------------------
I just broke away in the middle of this message
and had a chance to take the cover off the
radio and do some looking around.
This radio is very easy to work on I must admit.
The hinged PC boards were designed for easy
service.
Well back to the topic, I found that the whining
would vary when any key was pressed on the
front panel. Looking a little further I found that
touching the front panel shield plate would
increase the level of the interfering sound.
I found it interesting that this was coming from
inside the unit with no antenna attached.
Well I got a jumper clip from my tool box and
grounded that shield plate just behind the front
panel (shiny chrome appearance) to the chassis
and every bit of the noise dissappeared !
It appears that over years the shield has lost
its bonding to ground if it was there to start with.
I am going to put a permanent jumper to ground
and put the cover back on it and close the book
on this luckily easy fix.

By the way I did not see any of that black sub-
stance that people talk about going bad in the
VFO. Apparently by this model they did away
with it

Thanks for everybodies input
on solving my TS-440 problem,

Eddie Bryant
N4UMJ

3637. F.S. - VERY HEAVY DUTY 4-Element 10 Meter Beam

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-13 00:00:00 UTC
From: "Jay C. Greenberg" <wa4vrv@srv.net>
Message-ID: <mbs01t0m6cb13sreips4qn0ja2gp79siqq@4ax.com>
Source record: 69132

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Hi and thanks for reading this posting. I have on eBay 2 listings - one for a Collins 75A2 Receiver in near mint condition (Very Good condition following the Collins Collectors Association). It all lights up and works great. Item number on eBay is 493926842. I also have the matching 32V-3. Transmitter that is also in Very Good condition and works on all bands with full power. Item number on eBay is 495204807 (peviously listed under 49420445 but with wrong model number). Both rigs are collector's items and photo's of each rig is with each listing. Good luck on your bidding! Bidding ends on 11/16 for the receiver and 11/17 for the transmitter.

Why are republicans assholes ?

Let us see.

They don't want the courts involved in the
election in Florida so they go to a Federal
court to stop the count.

The Federal judge tells them to Fuck Off.

They convince the State official to force a
final count by 5pm to take away the voters
legitimate right to know the people's vote
and force the Democrats to have a state
judge give them an extension.

The extension is the only way to come to
an accurate conclusion.

The republican assholes don't want the
accurate conclusion. They don't care
about the people or their votes.

REPUBLICANS ARE INDEED ASSHOLES.

3650. WTB: ATV transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-13 00:00:00 UTC
From: Ross Hatfield <aimee@zoomnet.net>
Message-ID: <2%RP5.24$MM3.7960@nntp1.onemain.com>
Source record: 69197

Hi,

I am looking for a ATV transceiver. Would like to find a PC Electronics TC70-10 or Wyman Research TRIDON 2000 H. Might also be interested in the lower powered units.

Thanks

Ross

First of all, your radio is not "for sale" its FA "for auction" and should be listed that way to avoid confusion. Some folks on the ng's get pretty testy when E-bay stuff gets listed for sale !!! Secondly, I looked at your posting on E-bay and you state that the radio (706 MKII) will transmit through 70cm? The MKII does not go up to 70 cm, only the 706 MKIIG does that. I guess my question is: are you auctioning a 706 MKII or a MKIIG?.

3657. Re: Kenwood TS-440 SAT- Whining noise -Hotglue fix ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-13 01:35:59 UTC
From: ns1r@aol.com
Message-ID: <20001112203559.11140.00001318@ng-ce1.aol.com>
Source record: 69187

I had the same thing on mine. It is a defect
on the radio design. I think Kenwood had a faulty DC to DC transformer and if
you use the hot glue it will help silence the problem. I was told by Tech
Support at Kenwood 5 years ago "WEAR HEADPHONES AND YOU WON"T HEAR THE DC TO DC
TRANFORMER". Real commedian. I think Kenwood should have done the repair for
fee. I did the repair myself.

3659. Re: Question on jungle radio for nature conservation project

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-13 02:21:26 UTC
From: Richard Ferguson <raferguson@att.net>
Message-ID: <3A0F50C1.89E30B4F@att.net>
Source record: 69189

Obviously a repeater is one solution, and the one I would implement
myself, if I had a friend with a spectrum analyser.

My view is that repeaters are very touchy systems, and require real
radio experts to make them work and keep them working. The original
poster, and the natives, lack that level of expertise, unless they can
hire a local technician with repeater experience. Repeaters also
require licences for two frequencies. Commercial repeaters can also be
rather costly.

3666. Keyer that will work with grid-block?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-14 00:00:00 UTC
From: Michael Kellogg <Michael@kelloggs.org>
Message-ID: <t14f2l7gt7na24@corp.supernews.com>
Source record: 69002

I got a set of paddles with the Yaesu FT-101ZD (tube rig, circa 1981) I bought from a local ham recently. However, didn't get a keyer with it.

I've almost pulled the trigger on a couple of keyers that I've found, only to find out they won't handle the output into the key provided by my rig. I'm told a modern keyer will go "KA-FLOO-EY" in short order when I try to use it.

I'm considering a couple routes and need the help of my fellow NG hams. First, I'd like to find out what keyers I _can_ use with my rig and paddles so I can look at some of them. I'm willing to build a kit, too, if that's a good option. The key-up voltage out of the rig is 7 volts, and key-down current is 1.5mA.

Second, I'm considering just blowing off the keyer and saving up a little more cash to buy a nice bug with instead (partly because I really don't want to lose my fist). I can continue using my straight key and just forget about the paddles until some day when I buy a modern rig that has a keyer built into it.

Can anyone offer any advice here? If so, pls cc: my email, too. Tnx in advance!

From: JJ&A <w7ls@blarg.net>
Message-ID: <3A123F0E.D02A8FFC@blarg.net>
Source record: 69004

Really, really clean Heathkit HW-9 for sale. Comes with original book. No mods. No WARC kit. Nicely done circuit work inside. Not a project. The only thing I would look into is the backlash on the dial. It seems a bit much. I've tried other HW-9 rigs and they seem to have less backlash. Probably an adjustment. Will look into it. Transmits and receives great. Too many rigs standing around here, doing nothing. Need to make some room. $250 plus a few for UPS. MO preferred, check ok.

If you find it let me know... I can't even find a Mic cable pinout in the
owners manual.

An alternative is to use the mini DIN for packet on the Rear of the 207H.
The pinout for that is in the manual. The only disadvantage is the mic on
the HM98 is still in circuit when you use the din.

I am also looking for MH-98 circuit. connection. I am just looking to
find the PTT pin so I can remove the DTMF hold time on the PTT!

Also looking for the OPC-646 pinout which is a stiff $90, but it might
have active circuits. (pc clone cable)

3681. First 2M Rig - Suggestions or comments on my list ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-14 00:00:00 UTC
From: Richard Smith <rsmith@NOSPAMplaneteer.com>
Message-ID: <zCcQ5.97680$YG5.74558@tor-nn1.netcom.ca>
Source record: 69066

Hello there,

I am looking at buying my first new 2M radio. Being as I am just starting out, I am not looking at spending too much so I have made a shortlist of a few possible radios that are at the lower end of the price range:

Alinco DR-140TQ
Yaesu FT-1500M
Kenwood TM-261A
Icom IC2100H

Can anybody give any comments on any of the above radios, or suggest anything similar in the same approximate price range ?

It would be nice to have airband receive (I believe the Alinco is the only one in the above list that can do that), but it is not necessary.

Thanks in advance,

Richard.

You're right ... only been licensed 20+ years and surfing the net for 5.

Fact is I "gotcha" with the subject of my original post. You got yourselves so wound up that you had to whine about something when you found nothing to cry about. Had you sufficient internet experience you'd know that "hihi" represents a chuckle, "LOL" Laugh out Loud and Bwahahaha a horse laugh - which is all your misplaced criticizm deserves.

Jeez Dwight, don't confuse him with facts :o). I'da thot it obvious that the Republicans knew the judge'd throw their case out and did it just to set that precident - that federal courts have no jurisdiction over local election procedures - just to keep Gore from going there if he looses in state court.

HooWee!...thank you for the lesson oldtimer, one can always learn I guess even if you've been an Advanced class licensed ham operator (like me) for 38 years, be the trustee for a ham club callsign and the local repeater callsign, hold a 2nd class commercial radiotelegraph & radiotelephone operator's license, have worked several years on oil rigs as Radio Operator and several more years on ocean going ferrys as Radio Officer.

You likely know then, being an old timer, that 'Hi Hi' is used as laughter on Morse code because it's very easy to send (.... .., ...) . I suppose you 'could' use Hi Hi in text but it seems a little silly to me, mind you, I've only been on the internet for 4 years, not the long time that you have (5 years) so maybe I'll learn. Cheers...

Source record: 69082

Kevin,

Take a flat piece of cardboard, and wind a square "coil" on it. About, oh, 15-20 winds about 1/4-3/8" or so apart (not critical, but the closer you make them, the more winds there are in a given area, and that's better). Some enameled wire out of an old TV picture tube yoke works well, but any light guage wire will do. Then, find some sort of ground, and fasten the inside wire of the coil to that. Fasten the outside of the coil to some metal (I used to use a bunch of shelving in the plant I used to work in) as the antenna. You'd be amazed the signals you can pull in that way. Of course, there might be some other factors involved, like interference generated inside the plant, that might defeat the purpose of this, but it worked great for me. I worked in an electronics test lab at the time (all steel, concrete, and metal roof, test gear, computers, and electronic interference), and amazed all the young kids in the lab who had never seen anything like this. Oh, by the way, you put it up against the radio (move it around 'til it works), then use some tape to hold it in place. Voila! You've created a large antenna (the shelving or whatever) with an air coupled transformer using the ferrite bar antenna inside the radio as the secondary part of the transformer. :-)

Hello all the following equipment is for sale

Yaesu FT726R complete with MFJ Deluxe electronic keyer also CSI TE-32
rotary switch pl unit
and MD-1 microphone as well as Yaesu YM-48 DTMF handmic all manuals
comes with 3 modules installed
2m 144-148mhz,70cm 430-440mhz,70cm 440-450mhz has satellite board
installed all outputs 20 watts.
works flawlessly!

The radio is in excellent shape asking $800.00 + 30.00 shipping to
lower
48 USA states
Prepaid US postal money order

Motorola GM300 UHF 438-470mhz w/45 watt PA the unit comes with 2
microphones the standard
small radius black hand mic and a DTMF backlit motorola handmic and
power cord was used
for a base unit for about a year in standby operation has complete
high
signaling MDC1200
and 16pin accessory 16 channels w/scan as well very nice shape!

$300.00 + 20.00 SHIPPING prepaid US postal money order

Motorola CB tester Model S-1354A does VSWR POWER MOD and FS in
excellent
shape

$50.00 shipped prepaid US postal money order

Motorola P60 2 channel w/pl board also has external Hirose microphone
comes with battery
and standard charger freqs on 464.550 mhz excellent condition!

$138.00 shipped prepaid US postal money order.

Radio shack UHF hand talkie "motorola talk about style" single channel
464.550mhz no battery
does work 100% tested compatible to unit above they talk to each
other
just lost the battery
cant locate it sorry!

$100.00 shipped prepaid US postal money order.

** Both Items above great for hunting camping ect. good 2+mile range!

Please contact me by email below or phone (630) 894-2081 any time near Chicago,IL.

Thanks for reading this message

3702. Cushcraft warning

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-14 00:00:00 UTC
From: plmills@attglobal.net
Message-ID: <3A11C2D3.A8A62890@attglobal.net>
Source record: 69087
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello to all,

First let me say that up until now I've been a happy camper
using Cushcraft products. However, I've just learned something
that may be of interest to anyone considering purchasing a
new Cushcraft antenna.

I recently bought an R-8 vertical. It was just damaged by
lightning and I e-mailed Cushcraft tech support regarding
parts availability....the answer was 2 sentences that suggested
I buy a new antenna and try to collect on insurance. Needless
to say, I was not happy with that so I wrote a letter to the
Cushcraft manager of amateur products. This gentleman was kind
enough to telephone me today. Essentially, the conversation
focused on the fact that the parts I needed would be so expensive
as to make buying a new antenna more practical. However, one
interesting fact did come to light. Parts for the R-8 vertical
had not been "priced" yet and were thus unavailable. Further,
Cushcraft does not "price" replacement parts until the product
has been out for 9 to 12 months. I'd suggest you keep this
in mind....if you drop your new R-8 or new whatever, you may
not be able to get parts for it for up to a year!!

thanks & 73,
Phil

Hi and thanks for reading this posting. I have on eBay 2 listings - one for a Collins 75A2 Receiver in near mint condition (Very Good condition following the Collins Collectors Association). It all lights up and works great. Item number on eBay is 493926842. I also have the matching 32V-3. Transmitter that is also in Very Good condition and works on all bands with full power. Item number on eBay is 495204807 (peviously listed under 49420445 but with wrong model number). Both rigs are collector's items and photo's of each rig is with each listing. Good luck on your bidding! Bidding ends on 11/16 for the receiver and 11/17 for the transmitter.

Source record: 69092

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

3711. Re: Yaesu FT-8100 Trouble

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-14 00:00:00 UTC
From: Jim <jspaz@i-55.com>
Message-ID: <3A11E23E.C5890460@i-55.com>
Source record: 69096

The FT8100 seems to have some design problems. One of the more common one is that the VHF transmitter works part of the time. Everyone that I know that owns one has had a similar problem. Seems to be related to the front head. If you push on it or wiggle it, the radio symptoms change.

The front head has some gold contacts that connect it to the radio body. You need to keep these clean. It snaps off the radio with just a flip of the latch on the side.

Send it back to the plant and see what they say.

Jim

3713. Yaesu FT-8100 Trouble

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-14 00:35:00 UTC
From: Curtis CCR <curtisccr@mail.com>
Message-ID: <8uq1bkrnk1@nnrp1.deja.com>
Source record: 69140

I did a search for post on the 8100 at deja and it appears that I may be having the same trouble as others reported earlier. Just thought I'd ask about this in case it is a widespread problem.

My FT-8100 has developed an interminant problem on it's "right side". I joke that it may have had a stroke and is suffering from partial paralysis.

The right side of the radio, typically used for UHF, but can also be VHF when operating VV-UU, just seems to lock up on me. It's now to the point where it's locked up more than it works. This has been going on for several months.

By "locked up" I mean: The busy indicator comes on, I can't control volume or squelch, and I don't get any audio. If a rx signal comes in while it's "locked up", it wll show on the s-meter, but I never hear anything. It doesn't effect tx.

The left side of the radio doesn't have any trouble. I can use UHF on the left (using VV-UU) and all is fine.

The radio was out of warranty when this started occurring. While I am not adverse to opening the control head, if it's an inexpensive repair at the "factory" I may just send it back.

Has anyone else run into this with the FT-8100? I saw a post about a known bad solder connection on the UHF potentiometer (the right volume control, right? This would make sense - screwing up the right side audio) - has anyone fixed this on their own with wrecking anything else? Is it anymore difficult to work on than my older FT-5200? Is Yaesu going to rob me if I send it back for them to fix it?

I'll be checking in to the NG on occassion, but replies cc'd to me by e-mail would be appreciated.

Thanks

3714. Re: Better Receiver than IC-765?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-14 01:08:40 UTC
From: "George, W5YR" <w5yr@att.net>
Message-ID: <3A109092.C65F026A@att.net>
Source record: 69141

"Better receiver" covers a lot of ground, Paul. I have both the IC-765 and the IC-756PRO. I used the 765 for ten years, mostly for CW and PSK31. I also have and use daily the Kachina 505DSP radio.

The PRO is MUCH superior to the 765 largely in the DSP filters that it provides and the ease with which the filters can be configured readily to match specific conditions.

You will get a different answer from each person who responds to your question.

For routine CW operation, the 765 is still one of the top radios out there, both receiver and transmitter. I still have mine and would not part with it, but it is a backup radio now. The PRO is just so much more pleasant to operate and has a number of *real* features that the 765 lacks.

YMMV . . .

3715. Need help with Kenwood TS-830S Problems

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-14 01:14:42 UTC
From: Larry Louie <y4562@home.com>
Message-ID: <6m0Q5.107540$P4.29257663@news1.rdc1.tn.home.com>
Source record: 69142

Aquired a nice condition TS-830S but discovered some problems that I hope some of the newsgroup members can help with.

Operates normally with 100W output on 80, 40, 20 meters. ALC seems to work fine in transmit mode. Receiver works normally on all bands.

1. The meter does not indicate speech compression in the (comp) switch setting although the processor works fine.

2. Low drive and output on 15 meters about 50W out.

3. No drive on 10 meters and zero output.

Rig appears clean and unmodified except for the blue wire disconnected to allow TX on the WARC bands. I reconnected it to the connector. No diodes appeared to have been cut for the WARC bands.

I have the service manual so my next step was to go through the basic checks.

Anyone can offer solutions to similar problems they experienced would be greatly appreciated.

Thanks Larry WB6NYR

Hey Eddie!...very good on you for fixing your whine there!...as a matter of interest what kind of 'potting material' IS in the VCO can?...(that's a low sided metal can about 2 inches by 2 inches near one corner of the TX board - the one you see when you remove the bottom cover, mine had no top on it). The one that I saw had a cream coloured rubbery compound sprayed in there.

I Have For Sale A Nice Clean Hallicrafters HT-33B Amplifier. Works Well.
Used Very Little. Runs A PL 172 (8295 Eimac).

With Manual (Aftermarket Nice Factory Laminated)

Pictures Available.

This Is The Good One With The Bow-Tie Type Band Selector Knob & Dual Meters

I Would Be Willing To Trade For A Continous Coverage HF Rig With Auto Tuner
That Can Be Computer Interfaceable.

You Have To Ship Or I Could Meet You Somewhere Within Reason. (Houston Area)

Gregg E. ....W5IDX .http://home.att.net/~gregg.e/index.htm

Thanks:
W5IDX@qsl.net

Source record: 69048

The problem compound is an amber color, if it is wax or whitish hot glue you are OK. The other VCO is on the PLL unit under the IF. The one with a cover at the front. Same story, amber no good. Once it starts turning black problems are on the way.

Is it really necessary to pay the price for the Icom cloning cable for the W32A HT, or can one be fabricated easily? URLs to diagrams would be helpful, if anyone has done this!

Oh, you're using something, No User. If Gore is so concerned about the "voter's ligitimate rights" or so concerned about an "accurate conclusion," then why isn't he asking for extensions and recounts nation-wide? In other words, why does his "concern" seem limited to just the voting districts that might help him win this election?

It's actually not in Pomona, but Walnut. It's in the parking lot of Cal Poly Pomona, just off of Temple. You can't miss it. Come down the 57 from Pomona and get off at Temple, turning right. Follow that down a ways and turn right at the Kellogg Horse Ranch (pretty sure there's a sign for it there). Any problems, ask for vectoring on the DBARS repeater at 146.640MHz, PL of 167.9.

The swap meet is pretty early, like 7am, and guys are packing up a bit after 9, so get there early.

I tried a year or two ago to get parts or even information about the matching box at the bottom of an R7 Cushcraft. Since I bought it used, it would never work on other than the two highest bands. Couldn't even get an SWR minimum anywhere else. I finally, in disassembling it in disgust heard a rattle in the box as I moved it and discovered a broken toroid in the matching box.

Over a couple of weeks after several attempts to contact their service department both by phone and by e-mail I finally received a phone call from a gentleman. The bottom line was that they would give me NO information about the broken toroid, would NOT sell me a toroid, could/would NOT test traps or other parts which which he said might be bad and they'd be glad to sell me the WHOLE MATCHING BOX for well over $100. They "used to" have a test rig to test traps but they moved it to "production" now and can't test traps.

Cushcraft used to be a very fine company to deal with and if one had a problem they'd go out of their way to help and even have sent me parts free for antennas out of warranty. Now they have a DEAL FOR YOU and it's going to cost you LOTS OF MONEY and you aren't likely to want to take advantage THEIR DEAL FOR YOU when you call with a problem.

I will NEVER AGAIN buy anything made by Cushcraft. They just plain don't care anymore about customer satisfaction or whether or not their products live up to their advertising hype.

Hi Pete

ah!! the old one's are the best

i know most folks think the 706 is a dog but that is taking it a bit too
far!!

it might make the case all glossy, but i suspect it won't correct the
underlying pathology

any ideas as to whats up?

hi phil
when it comes to lighting damage it is cost effective to replace the
antenna due to EM damage that may not show up right away as for the
fact that cushcraft doesnt have replacement parts for a new antenna its
the same way with most things i know GM and ford are that way with a new
car try and find a replacement part for a new production model car till
its been on the market awhile
good luck
oh and this comes from someone who is still waiting ion cushcraft to
send replacement parts for a 10 year old ant its been 4-5 weeks

Lets see, Democrats hate tobacco companies as being evil but give away
cigarettes to buy votes...
Democrats don't like the outcome so lets keep counting until we get
the answer we want...
Democrats bring in a Daley to run a campaign when his father was as
crooked as they come, I know I know the son might be as pure as the
driven snow but still makes you wonder...
Democrats cant follow an arrow to find the hole and then blame
everyone else for their stupidity...

so which party is worse? it all depends on your point of view but....
WHAT THE HELL DOES HAVE TO DO WITH THIS NEWS GROUP?!!!!

Cushcraft said they were *discontinuing sales* of the older models, NOT
that they would no longer support them. Bencher has twisted the
notification to suit their fancy, painting a deceiving picture of their
competition. Pretty lowlife if you ask me!

Hi, Regina...

I have two of the TS-570DG rigs. I really like them and never have had any kind of trouble with them. I also have an Icom-746, a Yaesu Ft-890 and a few older rigs, but the only rig I use is the TS-570. I find it works great on CW (I operate 95 percent CW) but also does a great job on SSB. I have used it on RTTY and PSK and it performs very well. It is a bargain for the price they are going for these days. Go for it!!

Possibly OT, but here's a couple of thoughts.

I'm taking note of the opinions mentioned here, as I was intending to invest in a vertical. Both companies being mentioned in various posts, and especially the 'note' on the Butternut (Bencher), site has made me think again about business ethics and dealing with various companies. In fact, the knock on is that I've been looking to replace a Bencher key, which I had to claim for on insurance when it was stolen. I will probably not buy a Bencher, but then I was tending towards a different make anyway, so they probably would not count me as a 'lost sale'.

However, as to whether all this will really hurt Cushcraft and/or Bencher, I doubt it. There are more Amateurs who don't read this NG than do, and most of these companies have bigger business interests away from Amateur Radio than in. The numbers of Radio Amateurs, at least in the UK, is in decline. We're starting to become even more of a minority interest than we were a few years ago, and AR, despite what 'we' may like to think, doesn't carry much weight in the business world.

So, companies like Cushcraft and Bencher could well look at the postings here and think, perhaps privately, 'so what?'

Let's not over inflate our opinion of ourselves and our influence, eh?

de Dave (G0DJA)

Grid Block keying would be a NEGATIVE 150 volts dc or so. That is what my Heathkit HD1410 was designed to handle. I used it on my Kenwood 520 for 20 years.
sounds like your rig is using positive keying, not Grid block.

That's not the way I see it. Informing prospective customers of your own product support policy as opposed to the competition is just good business. Maybe Cushcraft will be moved to actually support their own products better.

So far, so good.

But they completely distorted the Cushcraft statement.

Cushcraft states they have discontinued the SALE of certain old
antennas.

Cushcraft did not state that they would no longer SUPPORT existing
owners of those antennas.

The Bencher notice is outright fraud.

Hello,

Our hunting party has grown over the years and we have been required to spread out over about a 5-mile radius. I am looking for specifications for some two-way radios that would allow us to stay in communication with one another.

The terrain includes forests and moderate hills (at most 200 - 300 feet high). Would anybody have any specifications or product suggestions to allow me to accomplish this?

Thanks in advance!

poss low pas filter/s blown ,also the early 706 had trouble with pwr lead socket being close to some components on pcb, slightly later models had a foam rubber pad installed[and poss componenets moved in this area] under pwr lead socket on rear of radio, i know one person who lost components through being knocked off pcb board via this area due to regular moving of power lead,although this affected 2m receive and not hf.
have you been using a longwire and atu , and had power level set on high whilst tuning up, thus putting 100w into very high swr internittently whilst tuning atu.
i had this problem a few years ago,and that is what was wrong with mine,low pass filters gone.
hope this helps. cheers ian m0bcg

simple solution !! go TO Radio Shack or the Home Depot. They sell 4 foot, 6 foot and 7 foot types that work great with the IC-2100H I own. Price is right to $ 4-5
Try radio shack first..

Aren't Cushcraft and support mutually exclusive terms?

Why shouldn't a competitor point out the shortcomings of a competitor by commenting on their competitor's public statement of fact???

Gee I suppose you also expect politicans to run a fair campaign!!!

Well worth a check. My 706 worked on some bands but not on others -
and it turned out to be one of the relays (that switch in and out the
low pass filters for each frequency range) that was permanently
energised due to a short circuited protection diode.

Hello All !

I have a Yaesu Ft101e with speech processor, AM filter, xtals for 160 thru 10 -- plus 17 meters !!!!!!
Also have the SPECTRONICS DIGITAL READOUT and the FT650B 6 meter transverter . Copies of all manuals AND the FT101E FACTORY SERVICE MANUAL. Some FOX TANGO articles. No manual for the readout (IT works great -- I like it better than the FC601 - it has the built in sideband offset) I do not wish to break the rig it up !!! It is in very good condition and EVERYTHING works fine. Make an offer before it goes to e-bay.

Russ

Lets see,

Me an ammateur from Holland is looking into this kind of newsgroups to find
out more of the radiohobby we AL share.
But to my surprise I read al about the past elections....
We do have t.v. in this country and are realy blowing from our feets with
this kind of "news".
If you all dont mind than lets get back in to the hobby we share, and let
the politicians fight this out
Dont get me wrong, I understand the importance of the outcome verry much but
this is'nt the place to express your thoughts about them.

ammateur greetings from the Netherlands.
Dennis pe1nqh@zeelandnet.nl

FS: I have a second (backup) Johnson Viking II and 122 matching VFO
that I have decided needs a new
home. I sold my first one that I listed about a month ago. This
particular one looks nice on the front panel
also and includes a manual. This one hasn't been on since 1993 but
was working when last on. I want $250
for it. If interested call Mike at (979) 693-1461. By the way, I
sold the last one the same day I listed it and
sold it because the guy called me on the phone for the details and
then took it. Everyone else was waiting
for a reply via e-mail. I check my e-mail pretty regularly but the
phone gets it every time......

I agree with Chris, your pa transistors are probably okay at the moment if it is drawing 20A, but don't keep on transmitting otherwise they may expire!!.
As Chris said probably one or a number of the band switching relays in the o/p bpf have either gone o/cct or welded themselves shut, this would cause a serious mismatch to the o/p of the pa, which may cause the self oscillation, this would also account for the 'deaf' rx in certain band sections.
I've seen this sort of thing occur a number of times in 706's owned by cb'ers, where continously tx-ing out of band causes the bpf relays to expire, this can result in a repair bill almost as much as the 2nd hand value of the set (706mk1).
If you can identify the offending relays contact Icom-uk to order the spares 01227-741741, they may be kind enough to even supply you with a layout drawing of where to find the relays on the board.
Good luck.
Geoff.

Be sure to check out the newly alocated MURS CB band in the VHF
frequency range.
You are allowed 2 Watts and a choice of several VHF frequencies in
the 150 MHz range.
This is developing as we speak and is being opposed by Motorola.

So be sure to check the link below for updates.

Actually if you want better you need to go older !
Most of the older receivers out perform the new ones, and no the 756-pro is
not a better receiver.

I have the same antenna, Gervais. This is the one I called about some years ago. The fellow was surly, a smart aleck, condescending, and by the time I got off the phone I was so mad, if I'd have been at his counter in person, I'd have snatched him over that counter and smacked him up against the wall! He was THAT bad! I just hung up. BTW, I have the antenna on the roof, guyed with rope, and I only use it as a receiving antenna for my standard 24 hr clock!

3778. Wanted: Hickok Tube Tester info...

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-15 00:00:00 UTC
From: "Dr. William J. Schmidt, II" <bill@wjschmidt.com>
Message-ID: <u%JQ5.4265$fv1.383340@news1.primary.net>
Source record: 68996

I've got an old Hickok 532 tube tester with a chart from 1961... obviously, all of the tubes made since then are not on the chart. Does anyone have a source for better updated charts... or alternatively, know what each of the selector switches means for tube connections (plate, screen, cathode, grid, etc.) so I can develop my own updated chart??? Thanks... Please use my email below.

For Sale:

Kachina 505DSP/AT2, computer controlled transceiver.

Virtually like new condx. (May, 2000 production date). Ordered with all options including:

AT2 Auto-tuner.
505ETX Extended transmit response option (4 Khz selectable).
505RPF Receiver Preselector Filter.
505XHS Extra high stability crystal oven option.

Also includes latest radio firmware (ver 4.29),and new control software (ver 4.21).

Complete with control head, software disks, operators guide, plus cables and connectors.

Asking: $ 1750.00 (+ship) USD.

Kirb, VE6IV

Dear All,

I have a mk1 706 that has suddenly developed the following syndrome

Deaf between 8MHz and 15MHz all other Rx OK

No HF/6M TX except for a strange "RF" carrier on all modes with or without any modulation

This "RF" carrier generates a >3 SWR even into a dummy load

Radio still drawing around 20A on TX at 100W setting into dummy load

VHF Rx/TX are fine

Any sensible comments on what is the matter (i.e. not.. it's buggered!!)

Blown finals?

Blown Transformer?

Cheers

Rob

Hi Bob,
I don't know the model exactly, but it sounds like the P.A. is going
into self-oscillation, generating an RF carrier.
May be worth checking the frequency of this carrier and see if it bears
any relation to the frequency shown on the display.
With the SWR being high, a fault could lie in the P.A. output stage(s)
where it couples into the antenna switching and/or antenna socket.
Can't help with the other fault though.

This model has been in production since 1986 and is still sold by Yaesu.

Here are the AES prices on the offered equipment:

FT-23R HT - $149.00
Belt Clip - $7.95
DTMF Adapter - $48.95
Slim Speaker Mic - $30.94
Encoder Option - $24.95
DC adaptor - $ 31.95

Total $293.75

The HT and accessories are in good condition and has a new high watt (12V)
battery.

Price: $145 PLUS shipping costs from 29609 to
your QTH. Has original manual, box, original wall charger.

In good condition. Receiver and transmitter can be extended outside 2m ham
bands for MARS and CAP via simple mods. This radio has NOT been modified.

Cheers,

AL

I was wondering if one of the band-switch relays had gone FUBAR and that
might be causing this effect, i,e, the 8-15MHz Tx/Rx relay

Bought an R-7000 a couple of years ago at Hamvention in Dayton. Never could
get it to tune. No help from Cushy on that one either. It still don't
work. Been laying up in the attic in the original box for a year now.
Never again will I buy one of their products, after buying many of them over
the years. Terrible customer service and equally terrible attitude when you
try to get an answer from them.

Message-ID: <up351ts3mvfflpudhv6k1g1cfdoh2fc98l@4ax.com>
Source record: 69039

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

Source record: 69040

I'll give two enthusiastic thumbs up for the Kenwood TM-261A.
I own two of them. Their performance has been outstanding!
It's been a LONG time since I've owned a 2m mobile rig that
was IMPERVIOUS to intermod like the TM-261A is. I commute
through areas loaded with high-powered pager transmitters
that used to tear up my previous receivers, but the TM-261A
is absolutely unaffected. The TM-261A does have aircraft
band receive, by the way. At about $180 brand new, it's the
best buy going in a 2m rig.

As for the FT-1500, some of the locals have already started
having problems with them, just like all of the other Yaesu
2m and dual-band mobiles they've wasted their money on. I
would not have a Yaesu VHF or UHF rig if you gave it to me
for free. I need something that I can count on.

No experience with the Alinco 2m mobile, but I love my Alinco
2m HT and my DX-70T HF mobile rig. No reason to belive that
the 2m rig would not be a good performer also.

No experience with the Icom rig, but it should do just fine.

Cushcraft tech support and warranty is on better. Do not even think about a warranty claim cushcraft will run you around and do nothing until you file a legal claim, which most people will not do for a couple hundred dollar product..

>Check out this "Important notice" on Benchers (Butternut) page;
>http://www.bencher.com/notice.html
>Sounds like "if you break it you buy a new one" policy applies for other
>Cushcraft antennas as well.

As they point out on the above-referenced page... parts are
still available for every Butternut antenna model they've
ever made! Their customer service is excellent. I've had
an HF-6V for over 15 years, and on the rare occasions that
I've needed parts or advice, they have been there for me.
Based on everyone else's experiences with Cushcraft, looks
like they'll never get any of my money.

This model has been in production since 1986 and is still offered by Yaesu.
Here are the AES prices on the offered equipment:

FT-23R HT - $149.00
Belt Clip - $7.95
DTMF Adapter - $48.95
Slim Speaker Mic - $30.94
Encoder Option - $24.95
DC adaptor - $ 31.95

Total $293.75

The HT and accessories are in good condition and has a new high watt (12V)
battery.

Price: $145 PLUS shipping costs from 29609 to
your QTH. Has original manual, box, original wall charger.

In good condition. Receiver and transmitter can be extended outside 2m ham
bands for MARS and CAP via simple mods. This radio has NOT been modified.

Cheers,

AL

Whatta shame. I had an old long-boom Cush 3-el 10/15 duobander at 80 ft. and it bored holes right thru any pileup in any dx contest back when with just an SB-200, the thing was just plain spooky, best pileup buster I ever used by far. But I had some problems with the original plastic standoff insulators they designed into supporting the driven element. Cush shipped me a whole bag of their improved versions along with a with a longwinded technical discussion and apologies. Took it down two years ago after thirtysome years up in the elements and it went back up about a year ago elsewhere and it's back cranking. Something good has gotten lost, shame.

3803. Help with Yaesu FT-102

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-15 02:06:58 UTC
From: Paul Coverdale <coverdale@sympatico.ca>
Message-ID: <3A11F045.A58108CC@sympatico.ca>
Source record: 69012

Would appreciate any suggestions in diagnosing a problem with my FT-102.

Symptoms:

No Tx output, no drive on any band, but Rx seems to function OK. I can hear the Tx if I hold a piece of wire connected to an external Rx close to the driver stages, and the level follows the setting of the drive control and peaks with the preselect control where you would expect. The plate and screen voltages on the 12BY7A driver tube look OK, and there's 12v on the collectors of Q9 and Q10.

73,

Paul, VE3ICV

Source record: 69013

A friend is taking the near-fulltime /MM path in his sailboat & has
asked me for radio recommendations as he intends to get a ham licence
as well as usual the commercial permits etc.
My question is - has anyone any comment on how the current crop of ham
HF transceivers holds up under a salty atmosphere not to mention
temperature & humidity swings ? Would something like an SGC unit be
better ? I know from experience how rugged the SGC2000 is ... thanks, 73

You may have problems finding a data sheet on this part. Generally
Motorola part numbers beginning with "S" are specials for a customer and
Motorola does not supply the data sheet to anyone other than the
original customer. In general it is probably on of the MJ series parts
selected for a specific parameter such as gain.
By looking at the MJ series parts you may be able to determine what its
base part was knowing the circuit requirements, power dissipation, break
down voltage, current handling capability, and the parts that were in
production at that date.
Also you may be able to find a cross-reference for in NTE's cross
reference book.

I was unable to find a cross for your part, but remember, motorola
was famous for 'house' numbers, I would say, just grab an E.C.G.
transistor cross referance book, and pick what you need for your
circuit, and forget about what the old one 'was'.

I'll answer anyway. If you feel bound to respond at his (no.user's) level, then it's pretty obvious where your own level is I'm an old-fashioned Republican (going on 30 years), which means I have manners and use them. If you can't or won't do the same, then most of the readers of this ng will do what I'm getting ready to do, which is block you so we don't have to read your nonsense.

Hello everybody
I need some information about digital Filter built araound a analog/digital multiplexer 74HC4051. How does it work exactly.
Perhaps somebody has the description of the the issue QEX may 1999 with the title "a digital commutating filter from Kossor Michael G. WA2EBY.
Does somebody know the link of the Homepage from WA2EBY.

Thanks for your help

3821. Any problems with the 570D/S

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-15 07:06:05 UTC
From: Regina Williams <regina.b.williams@worldnet.att.net>
Message-ID: <3A123639.7D27D6D2@worldnet.att.net>
Source record: 69030
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm looking at buying a Kenwood 570D/S (I haven't decided yet) and I wanted
to know if there are any bad things to know about. I spent a little time at the
local HRO and the only possible problem I saw was a susceptibility to interference.
(I noticed a lot of birdies, but most of them went away when I unplugged the antenna)

Any feedback would be appreciated.

Thanks

Regina

3822. $1.00! FA: Gertsch FM-3 20-1000 MHz Freq. Meter/Signal Gen. & DM-3 Dev. Meter

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-16 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <3a144a1b.4932382@news.pacbell.net>
Source record: 68848

I have for auction a Gertsch Model FM-3 20-1000 MHz Frequency Meter/Signal Generator & Matching DM-3 Deviation Meter. Both units tested out good. They are built into the same cabinet. Has power supply that runs off of 120VAC. I will include the original manuals.

I believe that these were made around the 1950's-1960's era.

Only $1.00! & there is ~NO RESERVE~

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=498165522

Thank You & 73,

Mike KQ6MU

3823. FA: Kris 200 M 10 & 6 Meter RF Linear Amplifier

I have for auction a rare Palomar Frequency Modulator (FM) Converter.
What this does is, it converts your AM Transmitter/Tranceiver into an
FM Transmitter/Transceiver. These came out in the 1960's-1970's, when
FM starts sprouting up.

Only $1.00! & there is ~NO RESERVE~

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=495988107

Thank You & 73,

Mike KQ6MU

Joe:

I hate to be the one to mention this to you, but this is a problem with the TS-120. The finals oscillate on their own, under certain conditions. I own a '130 which does not have the problem. I think if you cruze the web modification sites (possibly even on qrz.com), you will find a fix for the problem. Good luck:

Well that figure takes in replacing the finals as well Jon, expensive little beasties, they only pop if the owner keeps on transmitting into the now mismatced bpf's.
The typical bill turns out at approx £250-£300.

Geoff.

Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello! I just acquired an MMT 220 MHz transverter with the 28 MHz IF. It appears that with an IF radio of 28-30 MHz, the unit will cover 220-222 MHz. Is it possible to modify the unit by changing the 96 MHz crystal with a 97 MHz crystal, which would double to 194 MHz, to give 222-224 MHz coverage with a 28-30 MHz IF? Would any retuning be necessary? I hope I didn't just buy a paperweight! :^)

Any help would be greatly appreciated.

Hello Paul,

If your looking for good numbers in a great little CW/SSB package. Look at the Elecraft K2, its got a really nice to listen too receiver.

http://www.elecraft.com Go to the specification comparison, its right up there with the 756pro, 1000mp, Omni6+ etc.

3846. Kenwood TS 120S Transmit Problems

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-16 00:00:00 UTC
From: kc2dwp@aol.com
Message-ID: <20001116080733.07706.00000013@ng-cs1.aol.com>
Source record: 68925

Greetings:

I am experiencing difficulty with my TS 120S on the 10 and 15 meter bands.
When I key the mic on side band the meters jump and it appears as though I am
transmitting. The radio works fine on the other bands.

Thanks,
Joe - KR2V

I have a fleet of the Johnson Challenger VHF radios in the 150 to 160 mHz range. The mobiles are 40 watt. Johnson's new models have different size mounting brackets and connectors.

I am looking for some Johnson Challenger Plus 7152 or Challenger VHF 7164 VHF Mobil Radios. These wouild have to operate in the 150 to 160 mHz range. Mainly, I need them to fit existing brackets in the mobiles and the connectors to be the same. Also, the same programmer we have will work

Any places on the web to check??

> and IMD numbers, primarily

I work a lot of digital modes and to me "better" also includes 1 Hz tuning steps, a wide range of selectable narrow filters, the ability to use narrow filters while in the SSB mode, and stability. You don't get those things in the "older" receivers. So, "better" depends on what specs are important to you.

hi adam
a G5RV dipole is a very picky antenna it has to be installed just so or it will
not tune properly and since your telephone line is so close to your antenna
thats why you have RFI the phone line is not a sheiled line and a auto tuner
will handle a 2.1 swr but not much higher
what i would suggest is since it sounds like you live on a very small lot is to
buy an HF vertical like the GAP or the butternut or the cushcraft R7 or R8 these
are all multiband HF verts and are ground mounted so you wouldnt need much for
ground radials
good luck

Maybe in poor taste, but when taken in light of the complaints here I doubt
that they are misleading.

I had planned on getting one of the "big" 40 through 10 multiband antennas.
The thing starts with three elements on 40 and covers all WARC bands, but I
think I'll try to find a different source for a "proven" antenna.

For VHF and UHF I've been using the C3i antennas and they have excellent
customer service.

OOOPS

It is a101EX. With the speech processor 160 crystals and AM filter added. I used 1 section of the 10meter band for the 17 meter xtals which had to special order. It does not have the DC supply option.

You mean the meter pins? These 120's had problems with final amp
oscillation due to poor grounding. First thing is make sure your
120 is grounded *for RF*. A quick check is see if the problem still
exists transmitting into a dummy load. If that doesn't do it,
tighten the printed circuit board screws that hold the boards to
the radio frame rails.

> > They convince the State official to force a final count by 5pm to take away the
> > voters legitimate right to know the people's vote......

That is untrue! Florida law established that deadline, NOT the Atty Gnrl. Moreover the Fla Judge the 'crats asked to set it aside ruled that neither he nor she could do so *but* that the law did allow her to accept late counts if there were extenuating reasons (eg a hurricane). Accordingly, she asked the registrars of the counties contemplating recounts for their reasons in writing and rejected them because they were invalid! After all, there has already been a count, then a recount, and there is no reason to believe that a third count, by hand or otherwise, will yield more accurate results. In fact, the opposite is true.
> >
> > The extension is the only way to come to an accurate conclusion.

That is disingenuous - the more you count those kind of ballots the less reliable your results become! With 20/20 hindsight, we can argue that Democrats representing the counties in question should have switched to optically scanned ballots decades ago; but they did not and now it is too late! We are left with a bunch of fragile ballots that, when counted twice, gave Bush the win; but were damaged in the process.

The method is 1950's punch-card technology. Each ballot is "read" by poking mechanical fingers against every chad representing a choice and registering the choices with missing chads. Trouble is, these "fingers" dimple some chads and knock others loose. If a chad comes loose after the machine has recorded the vote there is no error *in that count* but there will be an error in every subsequent recount!! Thus the *first* count is always the most accurate that this outdated method can provide. No subsequent machine *or* manual recount can tell which chads were knocked loose by the machine vs those punched out by the voter!!!

My poor Rural Virginia county switched to optical character readers and pen-marked ballots over a decade ago. Why Palm Beach, etc, failed to do so escapes me. If they had, sturdy pen-marked ballots would be available for recount and Democrat claims would have some validity. But they did not so now there is NO way to determine what each voter intended ... and that's a fact!

Now, knowing that every recount is *perforce* less accurate than the first, who are the "assholes" demanding ever more *inaccurate* recounts of those damaged ballots, especially recounts that call dimples made by the machines votes??

Frankly, I don't care who wins but anybody who understands the mechanics of these machines and ballots can see that it is the Democrats showing us the donkey.

Excuse the rant but I'm tired of seeing these lies perpetuated on every NG I visit.

Well I just got the Icom 2100H and love the rig. VERY easy to use
and program, big knobs/buttons. Green or amber display settings.
Backlit mic buttons. The price is great as well. I'm VERY happy with
it. I highly recommend it.

Indeed you're right Ka9car, I'd think just about any keyer output would handle
+7 volts at 1.5 mA, mind you, you need to check the specs on the keyer but 7v at
1.5 mA is pretty puny.

"KA9CAR" <nospam@nospam.usa> wrote:

I am not posting this to discredit your experiences, I am mearly going to give you my recent very good experiences with Cushcraft. I bought a AR27013S 6m, 2m, 70cm Beam in September. I had a problem with high SWR. I called Cushcraft left a mesaage. they called back within 10 Minutes and after several calls back and forth found the problem to be my ignorance.

The problem has since reoccured and I thought ok, I will buy a new reddi match assymbly. I placed my order and explained the problem on their website form. Low and behold, they call me back and stated that they were sending me the new reddi match assymbly at no charge. Maybe it is just me, but I did not expect that from them.

I also bought an MA5B. I opened the package on a Monday, to find that one of the rubber boots that cover the end of the traps had a small pucture in it. I called them again Monday afternoon. I told them I wnated to put the antenna up the next weekend. Fed Ex arrived on Friday with the replacement

Maybe my expectations are low, but from my experiences I am pleased with my recent experiences with Cushcraft!

Grant, I had the programming cable from an older model Icom HT and
got the software from a close out at RandL Electronics. The
information you have been getting about a 4 pin connector will not
work on the W32A I don't think. Mine plugs into the mic hole with
a three section mic plug.

3888. Re: Kantronics KAM+ comments

Newsgroup: rec.radio.amateur.equipment
Date: 2000-11-17 00:00:00 UTC
From: Seth Miller <sethmiller73@email.com>
Message-ID: <3A15B915.27BD530D@email.com>
Source record: 68798

The KAM+ (and KAM98) are decent units for the money if purchased on the used market. I have seen used KAM+ units with more-or-less current software in the $150-$200 range and this is a good deal for what you get. Do not expect performance on a par with the higher-end hardware (i.e. the SCS PTC units, etc.), but then again these are approx. 3X the cost of a used Kantronics.

- Seth

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

I don't think you would have any trouble keying a ft101 with any normal keyer. They should be able to handle it , unless there is something weird I'm not aware of. I have a homebrew keyer that I've used on quite a few rigs, including the old drake twins, and a TS-830 etc. For example, the key line on the 830 is about 65 volts. Nevr have had a problem.I may have even used it with a ft-101 I borrowed for a while. I think I did. The only part you have to watch out for is polarity. Some rigs are backwards from others. If it doesn't key the rig, reverse the polarity from the keyer to the rig. It should then work. Also, as far as I'm concerned you will gain a fist from a keyer rather than lose it...g It's hard to avoid slop using a bug unless you are real good. It's much harder to be sloppy on a keyer with the dot dash memory. I'm so spoiled on my keyer and bencher paddle, I could never go back to a bug or key. Too much work, and too much slop. "I'm kinda picky about my fist". MK

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. The mast is 2" diameter and 16' long. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping from Idaho Falls, Idaho 83402. You can see pictures of the beam at:
http://www.srv.net/~wa4vrv/beam.htm

or indeed those that don't fiddle as in my case!!

its only tx has been on 6M and 2M apart from my dad (a G3) who gives it the
odd run out on 40 when he comes to stay.

no 11m no mods and it has still cooked

so I'm looking at £300 eh?

anyone want a duff 706?

offers?

No one seems to get it. It is not about being a Republican or Democrat, I am independent and voted a split ticket in this election as in most. Unfortunately the system is supposed to work without getting the judicial branch involved and the hand recounts are rediculous.

Nixon conceeded in 1960 when there was obvious vote fraud in Cook County Ill. (much more populated by proportion of the total population then Broward and Palm Beach county are today). He could have, and was entitiled to challenge it but bowed out with grace and thus allowed the system to work.

You don't hear Bush demanding hand recounts in mainly Republican counties now do you. You also don't hear Bush demanding that someone look into the obvious voter fraud in St. Louis MO.

The electoral college is working. It was meant by our founding fathers to give small states with less than a population (like < .5%), such as DE, SD, ND and MT. more of a voice in deciding who our chief executive is. Without it, Florida, PA, NY, TX and CA would be deciding each election for us.

Gore is being a sore looser, it has ruined any chance of him ever holding political office again, he has pissed off the national Democratic leadership now.

Let the system work, perhaps Florida voters will take their votes more seriously next time and will look a bit harder at their ballotts rather than relying on some canvaser to fix their mistake or add votes to their tally.

Patrick Mason, an American who believes in the constitution and believes George W. Bush is our President.

Have a FT-5100 that won't power up, and isn't getting voltage on any pins going to the control head. Looking for a photocopy of the schematic so I can debug. Have several other service manuals that I can trade schematics on, or will gladly reimburse copying costs.

Thank you in advance....

Bill, I have had one for a few years now and I would highly recommend it. I use it mostly for RTTY, and VHF packet. Highly reliable and easy to use and set-up. Also as I am sure you are aware the Kam +, has the dual port feature with the hostmaster software, really handy for operating RTTY, etc. on HF while still monitoring a dx packet cluster on vhf. If you can find a nice used one at a fair price, go for it! If you have any more questions, feel free to e-mail me. 73 de Dale, N8PCN.

Astron switching supplies work very well. I have been using them on HF/VHF for a long time now. I had the SS-30M however, and sold it. I was very disappointed with what I received. The QST product review indicated it had the usual studs & nuts on the back for power distribution. Mine had two little square blocks, one red and one black for power distribution, each with a small hole where you could insert ONE (1) wire and then a set screw to lock the wire in place. I sold it and put my SS-25 back on line.

Source record: 68867

If it only does it on those bands there are two things to do. Make sure the SO-239 on the back of the radio is tight. If that doesn't fix it the remove the top and loosen then tighten the screws mounting the RF unit (the board on the right with the bandswitch on it). That will fix it.

Greetings!

I have an Icom IC-737 in EXCELLENT condition complete with mic and manual.
2 antenna inputs and SUPER FAST auto tuner! Awesome receiver! Too many
features to list: $725 shipped

Will entertain trade offers towards an IC-756 or Kenwood TS-870...or
perhaps a TS850SAT or TS940SAT. Would prefer local trade. Located in Beloit,
WI...within driving distance of Chicago or Milwaukee easily...but will consider
ALL offers!

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their
Internet

mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul
Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams:
net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different

newsgroups is so that folks who aren't interested in, say,
homebrewing,
don't have to wade through messages about homebrewing on the way to
read
about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what
rec.ham-radio
was renamed to during the first major reorganization. Any amateur
radio-
related message that's not more appropriate in one of the other
groups
belongs here, from contesting to DX to ragchewing on VHF to
information on
becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to

(surprise!) digital amateur radio. This doesn't have to be the common
two-meter AX.25 variety of packet radio, either; some of the most
knowledgeable folks in radio digital communications can be found here,
and
anything in the general area is welcome. The name was changed to
emphasize
this, and to encourage discussion not only of other text-based digital

modes, such as AMTOR, RTTY, and Clover, but things like digital voice
and
video as well. The former group, rec.radio.amateur.packet, was removed
on
September 21st, 1993. It is obsolete, and you should use .digital.misc

instead (or the appropriate new mailing list, mentioned below). The
group
has .misc as part of the name to allow further specialization if the
users
wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became
evident shortly after the original group was formed: Hams don't just
swap ham
radio gear, and other folks besides hams swap ham equipment. If you
have radio
equipment, or test gear, or computer stuff that hams would be
interested in,
here's the place. Equipment wanted postings belong here too.
Discussions about
the equipment generally don't; if you wish to discuss a particular
posting
with the buyer, email is a much better way to do it, and the other
groups,
especially .equipment and .homebrew, are the place for public

discussions.
There is now a regular posting with information on how to go about buying and
selling items in rec.radio.swap; please refer to it before you post there.
To answer a frequently asked question: No, there is no mailing list that
goes along with this group. If you can't read Usenet news directly, you're
out of luck.

The group rec.radio.amateur.policy was created as a place for all the
discussions that seem to drag on interminably about the many rules,
regulations, legalities, and policies that surround amateur radio, both
existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part
97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's
now legal to order a pizza on the autopatch, if you're not in the pizza
business - as well as complaints about now-preempted local scanner laws
hostile to amateurs, but plenty of discussion about what a bunch of rotten
no-goodniks the local frequency coordinating body is, as well as the
neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens'
Band radio service. Such discussions have been very inflammatory in
rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and
rec.radio.amateur.* unless the topic is genuinely of interest to both hams
and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where
informational messages from across rec.radio.* may be found, regardless of
where else they're posted. As of this writing, information posted to the
group includes Cary Oler's daily solar progagation bulletins, ARRL
bulletins, the Frequently Asked Questions files for the various groups, and
radio modification instructions. This group is moderated, so you cannot post
to it directly; if you try, even if your message is crossposted to one of
the other groups, your message will be mailed to the moderator, who is

currently David Dodell, WB7TPY. The email address for submissions to the
group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-
trivia should be directed to rec.radio.info-request@primenet.com. For more
information about rec.radio.info, consult the introduction and posting

guidelines that are regularly posted to that newsgroup.

==========
The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew,
and .space are for more specialized areas of ham radio: discussions about
antennas, the older tube based amateur, military, and commercial gear,

commercially-made equipment, homebrewing, and amateur radio space operations.
The .equipment group is not the place for buying or selling equipment; that's
what rec.radio.swap is for. Similarly, the .space group is specifically
about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle
Amateur Radio EXperiment; other groups cover other aspects of satellites and
space. Homebrewing isn't about making your own alcoholic beverages at home
(that's rec.crafts.brewing), but rather construction of radio and electronic
equipment by the amateur experimenter. The .dx group is devoted to long
distance amateur communications. Each of these subgroups has its own
charter and FAQ; please refer to the archives to find these documents.

==========

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are
available by Internet electronic mail in digest format; send a mail message
containing "help" on a line by itself to listserv@ucsd.edu for instructions
on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a
gateway at the University of Texas at Austin. To post a message this way,
change the name of the group you wish to post to by replacing all of the '.'s
with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and

send to
that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example).
You may
crosspost by including multiple addresses as Cc: entries (but see
below). This
gateway's continued availability is at the pleasure of the admins at
UT-Austin, and is subject to going away at any time - and especially
if
forgeries and other net.abuses become a problem. You have been warned.

<SNIP>

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is
genuine
interest in both groups in the topic being discussed, and when you do,
please
include a header line of the form "Followup-To: group.name" in your
article's
headers (before the first blank line). This will cause followups to
your
article to go to the group listed in the Followup-To: line. If you
wish
to have replies to go to you by email, rather than be posted, use the
word
"poster" instead of the name of a group. Such a line appears in the
headers
of this article.

One of the few examples of productive cross-posting is with the
rec.radio.info
newsgroup. To provide a filtered presentation of information articles,
while
still maintaining visibility in their home newsgroups, the moderator
strongly
encourages cross-posting. All information articles should be submitted
to the
rec.radio.info moderator so that he may simultaneously cross-post your

information to the appropriate newsgroups. Most newsreaders will only
present
the article once, and network bandwidth is conserved since only one
article is
propagated. If you make regular informational postings, and have made
arrangements with the moderator to post directly to the group, please
cross-post as appropriate.

duff 706 not quite for sale yet.

The very nice and helpful folks at ICOM uk have furnished the bits and the schematics, and from a bit of judicious multimetering it seems that it might be a couple or so of £3 relays and one or two x 11p transistors that are the problems rather than a whole £300+ back end.

Finals are ok..phew!!

so i'm going to get a big magnifiying glass, some beta blockers to steady my trembling hands and remove the ofending articles and replace

if this doesn't work then I'll be taking offers

Thanks again to Geoff, Virgil and the team at ICOM uk for their very prompt and helpful response, a good example of marvellous customer service

Hi Folks. I am considering getting cable internet access. However, I have heard that some cable modems can radiate a considerable amount of RF in the HF and/or VHF/UHFspectrum. I would like to hear about your experiences with cable modems in this respect, good or bad. Please include cable modem brand names and model nubmers!

Thanks.

I've noticed a lack of presence of Standard Radio Ham Radio
publications. Have they gone out of the Amateur market? They used to
have a web page, but I can no longer locate it.

I am using a Toshiba cable modem model PCX 1100 and I have not experienced
any problems to date. Although most of my listening is in the hf spectrum,
I do have a vhf/uhf scanner and haven't noticed any negative effects as yet.
Brian Denley

I use what is called SURFboard SB3100 cable modem made by Motorola and
there is no signs of RF at all. I'm very well pleased. Good luck .
